UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, DC 20549

FORM 6-K

REPORT OF FOREIGN PRIVATE ISSUER PURSUANT TO RULE 13a-16 OR 15d-16 UNDER
THE SECURITIES EXCHANGE ACT OF 1934

For the month of MARCH, 2005.

Commission File Number: 0-30464

IMA EXPLORATION INC.

(Translation of registrant's name into English)

#709 - 837 West Hastings Street, Vancouver, British Columbia, V6C 3N6, Canada

(Address of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports
under cover of Form 20-F or Form 40-F: FORM 20-F FORM 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as
permitted by Regulation S-T Rule 101(b)(1): _____

Indicate by check mark if the registrant is submitting the Form 6-K in paper as
permitted by Regulation S-T Rule 101(b)(7): _____

Indicate by check mark whether the registrant by furnishing the information
contained in this Form, is also thereby furnishing the information to the
Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.
YES NO

If "Yes" is marked, indicate below the file number assigned to the registrant in
connection with Rule 12g3-2(b): 82-_____

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the
registrant has duly caused this report to be signed on its behalf of the
undersigned, thereunto duly authorized.

NEWS RELEASE

MARCH 22, 2005

IMA'S DRILLING EXPANDS HIGH GRADE SILVER MINERALIZATION AT CALCITE HILL -PROGRAM EXPANDED BY 10,000 METRES

IMA EXPLORATION INC. (IMR- TSX.V, IMXPF - OTC.BB) is pleased to report results from Phase III diamond drill holes 146 to 161 at it's 100% owned Navidad project in Patagonia, Argentina. Highlights from drilling at Calcite Hill include: 83.0M OF 209 G/T SILVER IN HOLE 148 AND 80.2M OF 246 G/T SILVER INCLUDING 25.3M OF 476 G/T SILVER IN HOLE 151. The Calcite Hill soil anomaly extends for 1.4 km to the northwest of current drilling and is located along the Navidad Trend where IMA's Phase I & II drill programs defined an Indicated Resource of 268 MILLION OUNCES OF SILVER AND 1.1 MILLION TONNES OF LEAD (80.8 million tonnes at 103 g/t silver and 1.45% lead using a 50 g/t silver equivalent cut-off).

As a result of the success to date at Calcite Hill, IMA's Technical Committee has approved a 10,000m expansion to the Phase III drill program, thereby doubling the budgeted drill metres. This expansion will allow IMA's geologists to continue to delineate high-grade silver mineralization at Calcite Hill. New drill results from Calcite Hill (holes 146 to 152) have extended known silver mineralization another 100m to the northwest bringing the size of the main portion of Calcite Hill mineralization to approximately 275m long by 100m wide by 50 to 120m deep (see attached map).

Drilling at the Connector Zone (holes 153-156) has intersected silver mineralization over long intervals outside of the current Indicated Resource. Results include 88.8m of 107 g/t silver in hole 153 and 28.8m of 148 g/t silver in hole 154; both intercepts start at surface. Mineralization in holes 153 and 154 is open to expansion to the north and northwest. Both step-out and infill drilling is required in this area and an updated resource estimate will be undertaken when this is completed. At Navidad Hill, holes 157 to 161 were collared along the southern boundary of the known resource and demonstrate that mineralization continues beyond the limits of the Indicated portion of current resource estimation.

Mineralization encountered to date at Calcite Hill is predominantly hosted within trachyandesite volcanic rock and to a lesser degree within mudstone which overlies the volcanic rock. The volumetrically most important style of mineralization consists of calcite-barite veinlets and breccias with argentite-acanthite, native silver and lesser galena and chalcopyrite. In general, this style of mineralization contains high silver grades with minor amounts of lead and copper. In the upper portions of the host volcanic unit, and in the overlying mudstone, mineralization tends to be lead-rich and consists predominantly of medium-grained galena with moderate silver values. A resource estimate has not yet been done for Calcite Hill.
