DISCLAIMER
FORWARD-LOOKING STATEMENTS; STATEMENT OF SENECA CAPITAL BELIEFS; FORECASTS
This
presentation
contains
statements,

including
Seneca
Capital s
beliefs
as
to
valuation,
which
are
forward
looking
statements
about
future
events
and
sets
forth
a
presentation
of
our
beliefs.

The
forward-looking
statements
are
not
guarantees
of
future
performance,
and
we
caution
you
not
to
rely
unduly
on
them.

You
should
be
aware
that
any
forward-

looking statements are based on certain assumptions and subject to risks and uncertainties that exist in the business

environment
that
could
render
actual
outcomes
and
results
that
are
materially
different.

We
have
based
many
of
these
forward-looking statements on our beliefs, expectations and assumptions about future events that may prove to be inaccurate. While we consider these beliefs, expectations and assumptions to be reasonable, they are inherently subject to significant business, economic, competitive, regulatory and other risks, contingencies and uncertainties, most of which are difficult to anticipate and many of which are beyond our control.

We
caution
you
that
the
forward-looking
statements
are inherently uncertain and necessarily involve risks that may affect Dynegy Inc.'s (Dynegy) business prospects and performance,
causing
actual
results
to
differ
from
those
discussed

or
presented
in
this
presentation.

Without
limiting
the

generality of the foregoing, Seneca Capital's beliefs as to future value are based on a variety of assumptions as to the future that Seneca Capital believes constitute a reasonable, potential valuation scenario that could develop within the next several years for Dynegy but which are nonetheless subject to risks and uncertainties that exist in the business environment that could render actual outcomes and results materially different than anticipated. Seneca Capital's beliefs as to current value are based on a variety of assumptions, including as to the future, that Seneca Capital believes constitute reasonable assumptions but which are nonetheless subject to risks and uncertainties that exist in the business environment that could render actual outcomes and results that are materially different.

30%

Under-
performance

AND SERIAL ATTEMPTS TO SELL WITHOUT
A CAREFUL STANDALONE REVIEW

6

Blackstone Transaction #1 (Aug. 12, 2010 @ \$4.50 per share)

Cash deal at 1/3 of replacement cost at low point in the cycle after sharp and anomalous
stock price underperformance

Granted exclusive rights to 1/3 of Dynegy assets

\$50mm / \$16mm break-up fees and Blackstone right to match
Blackstone Transaction #2 (Nov. 16, 2010 @ \$5.00 per share)

Virtually
unprecedented

Recess
of
shareholder

meeting
Additional \$16mm break-up fee in the face of defeat of transaction

Only 26% voted in favor of sale at \$5.00 per share

Post-Blackstone

(Nov.
23,
2010

Dec.
15,
2010)

Poison pill to freeze top shareholders

Abandoned promise to carefully review its standalone restructuring alternatives

Icahn Enterprises Transaction (Dec. 15, 2010 @ \$5.50 per share)

Rushed to sell company for low price (deferred due diligence to post-signing)

Yet another \$16mm break-up fee

Gained pledge of largest holder (IEP) not to support pending consent solicitation for directors

Willing

to
spend
more
than
\$100mm

(15%
of
equity
value)

to
sell
the
company

(1)

(1)

Includes (a) \$16.3 mm break-up fee + \$10 mm expense reimbursement per the Proposed Blackstone Merger, plus (b) \$23 mm per the proposed IEP Merger, plus (d) \$36 mm change of control arrangements.

A DIFFERENCE IN ALIGNMENT
DRIVES A DIFFERENCE OF OPINION
VALUE

-

Seller at \$4.50/\$5.00/\$5.50 per share
(\$0.90/\$1.00/\$1.10 pre-reverse split)

-

Bought nearly 30% of stock in August
09 from LS Power at \$9.65 per share

A BIG 4

ACCOUNTING FIRM

SEES FURTHER COST CUTTING

Seneca retained a Big Four accounting / consulting firm to analyze the potential cost cutting opportunity at Dynegy (Big 4 Report)

Utilized various benchmarking techniques and publicly available information on Dynegy and industry peers in a Top Down

analysis (see appendix for fuller description of methodology)

Big

4

Report

identified

between

\$82mm

and

\$157mm

of

incremental

cost

cutting

potential

starting from 9/30/10 financials (12 months ending 9/30/10)

Big

4

Report

states

that

this

implies

an

additional

\$16mm

\$103mm

of

cost

savings

potential

on

top of the cost structure that Dynegy utilized in their proxy forecast; applying a 6x multiple yields

~\$1 -

\$5/share potential value from incremental cost cutting

10

Cost Reductions Could Provide Meaningful Value to Dynegy Equity

(\$ in millions)

~\$1-

\$5 / Share

Dynegy's capital structure provides very significant flexibility, with limited secured debt and ample liquidity options. Unsecured debt has minimal covenant protections:

No limitation on asset sales

No limitation on restricted payments

No limitation on debt or lien incurrence

No change of control provisions

Facing this flexibility and lack of protections, Dynegy's unsecured debt trades in the market at a substantial discount to its face value:

May

2011

PJM

2014/15

RPM

AUCTION

:

Could

begin

to

illustrate

the

impact

of

HAPS/MACT rules as some generators will potentially signal costs

of environmental rules

Q2

2011

MISO

Capacity:

MISO

is

likely

to

file

detailed

plans

for

a

PJM-style

capacity

auction with FERC providing an important mechanism to measure EPA rule impacts

16

Given forward dark spreads, we expect that up to 10GW of older/inefficient coal capacity should be retired before the '14/'15 without accounting for EPA-driven retirements

-

Angie Storzynski, Macquarie 1/10/11

We

continue

to

predict

roughly

25,000

MWs

in

PJM

will

have

to

choose
between
investing
in
environmental
equipment
or
retiring

[Modeling
assumptions
include]

Coal
units
under
400MWs
with
no
scrubber
installed
will
be
retired.

Also,
early
vintage
scrubbers
(built
prior
to 1985)

will not comply with upcoming EPA regulation.

We assume coal plant retirements from upcoming EPA rules; CATR and HAPS MACT will be phased in over a 3-year time with a 15% effect in the May 2011 auction, a 50% effect in the May 2012 auction, and a 100% effect in the May 2013 auction.

-
Brian Chin, Citi
Investment Research 1/18/11

MISO
will
likely
file
for
a
capacity
auction
at
FERC
in
2Q,
with
an
auction

in
early
13
for
the
13/ 14
delivery
period
At
MISO,
we
primarily
discussed the likelihood and timeframe for implementation of a formal capacity auction. While vertically integrated regulated utilities are
relatively averse to the idea, MISO's
initiative to develop a capacity auction stems from recent deliverability requirements demanded by FERC. As a
consequence,
MISO
has
indicated
to
FERC
that
it
intends
to
make
a
formal
tariff
filing
for
a
capacity
auction
by
2Q11.
The
first
auction
is
anticipated
to
take
place
in
early
2013,
for
delivery
in

the
2013/2014
delivery
year
(June
1st
2013

May
31st
2014).

-
Julien
Dumoulin-Smith, UBS 12/23/10 (After a December trip that included a meeting with MISO)

Disclaimer:

Seneca

Capital's

beliefs

regarding

current

and

future

value

are

based

upon

assumptions,

including

as

to

the

future,

that

Seneca

Capital

believes

to

be

reasonable,

however,

substantial

risks

and

uncertainties

exist

such that actual performance may deviate materially from Seneca Capital's forecasts (see page 2 for full disclaimer).

MARKET PARTICIPANTS HAVE
BEGUN TO TAKE NOTICE

If shareholders reject the BX revised offer, we believe a newly composed board and new management will likely take a rational, long-term and creative approach to breaking up the company (potentially taking several years) and realize a value closer to our \$9 per share break-apart value.

-

Charles Fishman, Pritchard Capital Partners, 11/17/10

18

Icahn's recent proposal to refinance DYN's credit facilities under amended terms should assuage concerns over the liquidity impact of asset sales/maintenance covenants. Seneca also recently proposed an additional four new board members,

all

of

whom

have

highly

relevant

backgrounds,

including

a

former

senior

rail

executive

We

have

incorporated

DYN's latest disclosures into our projections, adjusting our EBITDA outlook and increasing our cash flow burn through 15 to \$2.3 Bn. In contrast, DYN's sizeable operational and financial leverage could push equity value to \$12/sh on a power recovery and debt restructuring to mrkt value.

-

Julien Dumoulin-Smith, UBS 11/16/10

I believe that, even at \$5.00 per share, the proposed Blackstone acquisition undervalues Dynegy. Today's \$.50 per share

increase,

coming

only

one

day

after

Blackstone

stated

that

the

\$4.50

price

is

a

full

and

fair

valuation

reassures

my

belief that the Dynegy/Blackstone transaction leaves too much shareholder value on the table for Blackstone. I have also considered that in a November 15, 2010 report JP Morgan stated that it is introducing a December 2011 price target of \$7, up from our prior December price target of \$5.00.

-
Carl Icahn, 11/16/10 (In a statement filed with the SEC on a Schedule 13D/A)

REJECTING THE TENDER IS THE
ENABLING EVENT

Do not tender your shares for \$5.50 / share

WRONG PRICE at the WRONG TIME for the WRONG REASONS

We believe Dynegy is worth \$7.50 -

\$8.50 per share today and \$18-\$20 per share

in a recovery valuation -

trading at less than 1/3 of its replacement value

Board rushed to sell the company BEFORE conducting promised careful standalone review

\$36mm management change of control severance payments and a Board that has purchased only 16,000 shares creates misalignment with shareholders

Dynegy is the premier vehicle to participate in a power market recovery with substantial value creation levers independent of commodity prices

Industry leading leverage to EPA-driven retirements (validated by Ventyx model)

Positive asymmetric exposure to natural gas

Flexible debt structure reflected in ~\$7/sh market value discount of debt

Big 4 Accounting Firm validated cost cutting potential

19

Defeat of Tender Can Enable Investors to Participate in Dynegy Value Creation

Disclaimer: Seneca Capital's beliefs regarding current and future value are based upon assumptions, including as to the future risks and uncertainties exist such that actual performance may deviate materially from Seneca Capital's forecasts (see page 2 of Report).

APPENDIX
20

EPA CLEAN AIR RULES CAN
CHANGE MARKET DYNAMICS

Upcoming EPA rules may force coal generators to either invest in expensive control technologies or shut down

Stringent Maximum Achievable Control Technology (MACT) Rules could require compliance as early as 2014

Environmental controls can be expensive and unlikely for many plants if

the current power price environment persists

(1)

Pursuant to the Midwest Consent Decree, Dynegy will have spent \$730 mm (out of a total of \$960 mm) of environmental capital expenditures for the Midwest fleet by the end of 2010 and will have substantially completed its environmental capital expenditure program by 2013.

**EPA RULES: HAZARDOUS AIR
POLLUTANT HAPS/MACT**

The Clean Air Act requires the EPA to develop an emission control program for hazardous pollutants, including mercury and acid gases

The EPA is mandated pursuant to consent decree to draft a proposed Maximum Achievable Control Technology (HAPS/MACT) rule as soon as March 16, 2011 and to finalize it as soon as November 16, 2011

HAPS/MACT rule will apply to all existing and future coal and oil fired capacity
HAPS/MACT requires achieving emissions levels as good as the average of the
top 12% of existing representative sources

Credit Suisse estimates that for mercury emissions, this could require a 90% removal
rate

Affected plants would have 3 years to comply (i.e., 2014 or 2015), assuming no
case by case waivers or an exemption granted by the President

In

a

more

moderate

scenario,

the

EPA

could

propose

different

sets

of

standards

based on sub-categories, such as:

Size

Boiler pressure / temperature

Coal mix

No trading between plants

22

**CREDIT SUISSE MID-CASE FOR
COAL PLANT RETIRMENTS**

According to Credit Suisse, 66% of the coal capacity in the US have NOT installed (or announced plans to install)

both
scrubbers
and
SCRs
and
30%
have

no
environmental
controls at all

Smaller coal plants are less likely to invest in environmental controls as the capital cost is significantly

higher
on

a
\$

/

kw
basis.

More
than

50

GW

of

small

coal

plants

have

no

environmental controls installed

Credit Suisse base case assumes that 60GW of coal capacity will be retired including all units below 300MW without any pollution control equipment

Investor
Presentation,
Q2 10

**BIG 4 ACCOUNTING FIRM
COST STUDY**

A Big 4 accounting firm analyzed Dynegy's public data to determine a baseline level of costs, for which they utilized Dynegy's LTM financial results as of Sept. 30, 2010

O&M Costs

SG&A Costs

Cost of sales / fuel procurement

Analyzed public disclosures of selected relevant public comparable companies to determine industry benchmarks for each cost category

GenOn, NRG Energy, Calpine, Constellation, AES and Public Service Enterprise Group

Compared Dynegy results to comparable company benchmarks in order to determine where cost savings

would

be

possible

within

Dynegy

relative

to

its

baseline

cost

level

in

a

base

case

and

in

a

stretch case

Reviewed financial forecasts from Dynegy's preliminary proxy statement (January 10, 2011) to determine cost levels assumed by management, including cost savings plans already announced and being implemented by management

Used gross margin less Adjusted EBITDA as a proxy for SG&A + O&M

costs

Compared baseline level of costs and total savings potential to 2012-2015 forecast period and 2013-2015 forecast period costs to determine incremental savings potential for Dynegy for 2011+

\$16 mm of potential incremental savings in base case

\$103 mm of potential incremental savings in stretch case

25

Disclaimer: Big 4 Report has been provided in preliminary form, and notes further investigation, validation and diligence is required. The auditors have not verified the information obtained or presented in their report.

VENTYX POWER ANALYSIS

Ventyx (Energy Velocity) calculated a dynamic plant-by-plant fundamental production cost model based on their Fall Reference Case that integrates commodity price assumptions, resource additions and retirements

Load forecast based on utility filings

Build-out of all known and reasonably foreseeable transmission projects

Renewable additions to meet existing state standards

MISO and PJM capacity payments reach Cost of New Entry assumptions when reserve margins drop below 15%

Coal and transportation costs are based on Ventyx Coal Sub-Module that utilizes a least cost algorithm that includes variable cost of coal producers and different modes of transport

Natural gas prices based upon NYMEX strip as of January 5, 2011

Plant-level assumptions for heat rates, capacity factors and O&M are based on

Ventyx's Energy Velocity database (based on FERC data where available)

Applied Credit Suisse Mid-Case

(1)

(60GW of retirements) MACT retirement assumptions

Retirement of coal fired units smaller than 300MW without environmental controls

Compliance with all other existing environmental legislation (CATR, RGGI, EPA Tailoring Rule, etc.)

VENTYX BIOGRAPHY

Ventyx is a business solutions provider offering software, data and advisory services to energy, utility, communications, and other asset-intensive commercial industries. Ventyx was formed in 2007 by the merger of MDSI and Indus International and the acquisition of Global Energy Decisions and New Energy Associates during that same year. Each of these companies traces their roots to the 1970 s and have been providing clients in the energy sector with energy

planning, decision support, energy trading and operations solutions. In 2010 Ventyx was purchased by ABB, a global leader in power and automation technologies.

The Ventyx Advisory Services Practice, which performed part of the analysis in this presentation, traces its roots to the legacy Global Energy Decisions and New Energy Associates companies. The keystone product of the Ventyx Advisors Practice is the Ventyx Reference Case which is a semi-annual forecast of North American power and fuel markets. The Ventyx reference case is utilized by utilities, power generators, investment bankers and market regulators as an independent view of the current and expected state of power and fuel markets. Over the lifetime of this product offering the Ventyx reference case has become widely recognized with a large subscriber base.

**KEY DCF VALUATION
ASSUMPTIONS**

All DCF-based valuation metrics used in the Sum Of the Parts valuation on page 8 and elsewhere in this presentation included the following assumptions:

Capacity factors based on historical plant-by-plant data and management guidance from public presentations

Strip gas prices through 2015 as of 10/29/10 with a flat \$6 long-term natural gas price thereafter

Long-term CAPP coal of \$70/ton and PRB of \$12.50/ton

Increased coal transportation costs upon contract expiration

Near

term

retirements from POTENTIAL EPA HAPS/MACT rules

10% WACC on unlevered cash flows

Taxes calculated on a corporate level

All relevant capital expenditures (including environmental expenditures) included in DCFs on an NPV basis

Plant by plant model is calibrated to tie to 2010 guidance and therefore incorporates all

SG&A costs (including regional overhead expenses)

Disclaimer: Seneca Capital's beliefs regarding current and future value are based upon assumptions, including as to the future however, substantial risks and uncertainties exist such that actual performance may deviate materially from Seneca Capital's f
