APPROXIMATE DATE OF PROPOSED PUBLIC OFFERING:

As may be practicable after the effective date of this Registration Statement.

If any securities being registered on this form will be offered on a delayed or continuous basis in reliance on Rule 415 under the Securities Act of 1933, other than securities offered in connection with a dividend reinvestment plan, check the following box. x

It is proposed that this filing will become effective (check appropriate box):

x when declared effective pursuant to section 8(c).

If appropriate, check the following box:

This amendment designates a new effective date for a previously filed registration statement.

This form is filed to register additional securities for an offering pursuant to Rule 462(b) under the Securities Act and the Securities Act registration statement number of the earlier effective registration statement for the same offering is

Table of Contents

CALCULATION OF REGISTRATION FEE UNDER THE SECURITIES ACT OF 1933

Title of Securities Being Registered	Amount Being Registered	Proposed Maximum	Proposed Maximum	Amount of Registration Fee ⁽¹⁾
		Offering Price Per Unit	Aggregate Offering Price ⁽¹⁾	
Common Stock, \$0.001 par value ⁽²⁾	\$	\$	\$	\$
Preferred Stock, \$0.001 par value ⁽²⁾				
Warrants ⁽²⁾				
Subscription Rights ⁽³⁾				
Debt Securities ⁽⁴⁾				
Total	\$	\$	\$ 150,000,000 ⁽⁵⁾	\$ 17,190 ⁽⁶⁾

- (1) Estimated pursuant to Rule 457 solely for the purposes of determining the registration fee. The proposed maximum offering price per security will be determined, from time to time, by the Registrant in connection with the sale by the Registrant of the securities registered under this registration statement.
- (2) Subject to Note 5 below, there is being registered hereunder an indeterminate number of shares of common stock, preferred stock or warrants as may be sold, from time to time. Warrants represent rights to purchase common stock, preferred stock or debt securities.
- (3) Subject to Note 5 below, there is being registered hereunder an indeterminate number of subscription rights as may be sold, from time to time, representing rights to purchase common stock.
- (4) Subject to Note 5 below, there is being registered hereunder an indeterminate principal amount of debt securities as may be sold, from time to time. If any debt securities are issued at an original issue discount, then the offering price shall be in such greater principal amount as shall result in an aggregate price to investors not to exceed \$150,000,000.
- (5) In no event will the aggregate offering price of all securities issued from time to time pursuant to this registration statement exceed \$150,000,000.
- (6) Previously paid.

The Registrant hereby amends this Registration Statement on such date or dates as may be necessary to delay its effective date until the Registrant shall file a further amendment which specifically states that the Registration Statement shall thereafter become effective in accordance with Section 8(a) of the Securities Act of 1933 or until the Registration Statement shall become effective on such dates as the Commission, acting pursuant to said Section 8(a), may determine.

PennantPark Floating Rate Capital Ltd. is a closed-end, externally managed, non-diversified investment company that has elected to be treated as a business development company, or BDC, under the Investment Company Act of 1940, as amended, or the 1940 Act.

Our investment objectives are to generate current income and capital appreciation by investing primarily in Floating Rate Loans and other investments made to U.S. middle-market private companies. Floating Rate Loans or variable-rate investments pay interest at variable-rates, which are determined periodically, on the basis of a floating base lending rate such as the London Interbank Offered Rate, or LIBOR, with or without a floor plus a fixed spread. We can offer no assurances that we will achieve our investment objectives.

We are managed by PennantPark Investment Advisers, LLC. PennantPark Investment Administration, LLC provides the administrative services necessary for us to operate.

We may offer, from time to time, in one or more offerings or series, together or separately, up to \$150,000,000 of our common stock, preferred stock, warrants representing rights to purchase shares of our common stock, preferred stock or debt securities, subscription rights, or debt securities, which we refer to, collectively, as the securities. We may sell our securities through underwriters or dealers, at-the-market to or through a market maker into an existing trading market or otherwise directly to one or more purchasers or through agents or through a combination of methods of sale. The identities of such underwriters, dealers, market makers or agents, as the case may be, will be described in one or more supplements to this prospectus. The securities may be offered at prices and on terms to be described in one or more supplements to this prospectus. In the event we offer common stock, the offering price per share of our common stock exclusive of any underwriting commissions or discounts will not be less than the net asset value per share of our common stock at the time we make the offering except (1) in connection with a rights offering to our existing stockholders, (2) with the consent of the majority of our common stockholders and approval of our board of directors, or (3) under such circumstances as the Securities and Exchange Commission, or the SEC, may permit. See Risk Factors on page 7 and Sales of Common Stock Below Net Asset Value on page 41 of this prospectus for more information.

Our common stock has been approved for quotation on the NASDAQ Global Select Market under the symbol PFLT. The last reported closing price for our common stock on July 24, 2012 was \$12.14 per share, and our net asset value on March 31, 2012 was \$14.12 per share.

This prospectus and any accompanying prospectus supplement contain important information you should know before investing in our securities. Please read them before you invest in our securities and keep them for future reference. We file annual, quarterly and current reports, proxy statements and other information with the SEC. You may also obtain such information free of charge or make stockholder inquiries by contacting us in writing at 590 Madison Avenue, New York, NY 10022, by calling us collect at (212) 905-1000 or by using our website at www.pennantpark.com. The information on our website is not incorporated by reference into this prospectus. The SEC also maintains a website at www.sec.gov that contains such information free of charge.

Investing in our securities involves a high degree of risk, including the risk of the use of leverage. Before buying any of our securities, you should read the discussion of the material risks of investing in us in Risk Factors beginning on page 7 of this prospectus.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

This prospectus may not be used to consummate sales of securities unless accompanied by a prospectus supplement.

Prospectus dated , 2012

ABOUT THIS PROSPECTUS

This prospectus is part of a registration statement that we have filed with the SEC using the shelf registration process. Under the shelf registration process, we may offer from time to time up to \$150,000,000 of our common stock, preferred stock, warrants representing rights to purchase shares of our common stock, preferred stock or debt securities, subscription rights, or debt securities, on the terms to be determined at the time of the offering. We may sell our securities through underwriters or dealers, at-the-market to or through a market maker, into an existing trading market or otherwise directly to one or more purchasers or through agents or through a combination of methods of sale. The identities of such underwriters, dealers, market makers or agents, as the case may be, will be described in one or more supplements to this prospectus. The securities may be offered at prices and on terms described in one or more supplements to this prospectus. This prospectus provides you with a general description of the securities that we may offer. The information contained in this prospectus is accurate only as of the date on the front of this prospectus and our business, financial condition, results of operations and prospectus may have changed since that date. Each time we use this prospectus to offer securities, we will provide a prospectus supplement that will contain specific information about the terms of that offering. The prospectus supplement may also add, update or change information contained in this prospectus. Please carefully read this prospectus and any prospectus supplement, together with any exhibits, before you make an investment decision.

Table of Contents

PROSPECTUS SUMMARY

This summary highlights some of the information in this prospectus. It is not complete and may not contain all of the information that you may want to consider. Some of the statements in this prospectus constitute forward-looking statements, which apply to both us and any consolidated subsidiaries, as applicable, and relate to future events, future performance or financial condition. The forward-looking statements involve risks and uncertainties on a consolidated basis and actual results could differ materially from those projected in the forward-looking statements for many reasons, including those factors discussed in Risk Factors and elsewhere in this prospectus. You should read carefully the more detailed information set forth under Risk Factors and the other information included in this prospectus. In this prospectus and any accompanying prospectus supplement, if any, except where the context suggests otherwise: the terms we, us, our, and Company refer to PennantPark Floating Rate Capital Ltd. and its consolidated subsidiary; Funding I or our subsidiary refers to our consolidated subsidiary, PennantPark Floating Rate Funding I, LLC; PennantPark Investment Advisers or Investment Adviser refers to PennantPark Investment Advisers, LLC; and PennantPark Investment Administration or Administrator refers to PennantPark Investment Administration, LLC.

General Business of PennantPark Floating Rate Capital Ltd.

PennantPark Floating Rate Capital Ltd. is a BDC whose objectives are to generate current income and capital appreciation by investing primarily in Floating Rate Loans and other investments made to U.S. middle-market private companies.

We believe that Floating Rate Loans to U.S. middle-market private companies offer attractive risk adjusted returns due to a limited amount of capital available for such companies and the potential for rising interest rates. We use the term middle-market to refer to companies with annual revenues between \$50 million and \$1 billion. We may also invest in public middle-market U.S. companies that are thinly traded or have a small market-capitalization. Our investments are typically rated below investment grade. Securities rated below investment grade are often referred to as leverage loans or high yield securities or junk bonds and are often higher risk compared to debt instruments that are rated above investment grade and have speculative characteristics. However, when compared to junk bonds and other non-investment grade debt, Floating Rate Loans typically have more robust capital-preserving qualities, such as reduced credit risk, and have historically had lower default rates than junk bonds. Floating Rate Loans are typically the most senior source of capital in a borrower's capital structure and often have certain of the borrower's assets pledged as collateral. Our investments may have terms of three to ten years and are made to U.S. and, to a limited extent, non-U.S. corporations, partnerships and other business entities which operate in various industries and geographical regions.

Under normal market conditions, we generally expect that at least 80% of the value of our Managed Assets, which means our net assets plus any borrowings for investment purposes, will be invested in Floating Rate Loans and other instruments bearing a variable rate of interest. We generally expect that senior secured loans, or first lien loans, will represent at least 65% of our overall portfolio. We also generally expect to invest up to 35% of our overall portfolio opportunistically in other types of investments, including second-lien, high yield, mezzanine and distressed debt securities and equity investments. Our investment size may generally range between \$1 million and \$10 million, on average, although we expect that this investment size will vary proportionately with the size of our capital base.

Our investment activity depends on many factors, including the amount of debt and equity capital available to middle-market companies, the level of merger and acquisition activity for such companies, the general economic environment and the competitive environment for the types of investments we make. The turmoil in the credit markets in recent years has adversely affected each of these factors and has resulted in a broad-based reduction in the demand for middle-market debt instruments. These conditions may present us with attractive investment opportunities, as we believe that there are many middle-market companies that need senior secured and mezzanine debt financing. We have used, and expect to continue to use, our credit facility, or the Credit Facility, proceeds from the rotation of our portfolio and proceeds from public and private offerings of securities to finance our investment objectives.

Table of Contents

Organization and Structure of PennantPark Floating Rate Capital Ltd.

PennantPark Floating Rate Capital Ltd., a Maryland corporation organized on October 28, 2010, is a closed-end, externally managed, non-diversified investment company that has elected to be treated as a BDC under the 1940 Act. In addition, for tax purposes we intend to be treated, and intend to qualify annually, as a regulated investment company, or RIC, under the Internal Revenue Code of 1986, as amended, or the Code, commencing with our first fiscal year ended September 30, 2011.

Our Investment Adviser and Administrator

We utilize the investing experience and contacts of PennantPark Investment Advisers in developing an attractive and diversified portfolio. The senior investment professionals of the Investment Adviser have worked together for many years and average over 20 years of experience in the mezzanine lending, leveraged finance, distressed debt and private equity businesses. In addition, our senior investment professionals have been involved in originating, structuring, negotiating, managing and monitoring investments in each of these businesses across economic and market cycles. We believe this experience and history have resulted in a strong reputation with financial sponsors, management teams, investment bankers, attorneys and accountants, which provides us with access to substantial investment opportunities across the capital markets. Our Investment Adviser has a rigorous investment approach, which is based upon intensive financial analysis with a focus on capital preservation, diversification and active management. Since our Investment Adviser's inception in 2007, it has raised over \$1.4 billion in debt and equity capital and has invested over \$1.8 billion in 182 companies with over 100 different financial sponsors through its managed funds.

Our Administrator has experienced professionals with substantial backgrounds in finance and administration of registered investment companies. In addition to furnishing us with clerical, bookkeeping and record keeping services, the Administrator also oversees our financial records as well as the preparation of our reports to stockholders and reports filed with the SEC. The Administrator oversees the determination and publication of our net asset value, oversees the preparation and filing of our tax returns, monitors the payment of our expenses as well as the performance of administrative and professional services rendered to us by others. Furthermore, our Administrator provides, on our behalf, managerial assistance to those portfolio companies to which we are required to offer such assistance. See [Risk Factors - Risks Relating to our Business and Structure](#) for more information. There are significant potential conflicts of interest which could impact our investment returns.

Table of Contents

Market Opportunity

We believe that the limited amount of capital available to the middle-market companies, coupled with the desire of these companies for flexible sources of capital, creates an attractive investment environment for us. From our perspective, middle market companies have faced difficulty raising debt capital in both the capital markets and private markets. As a result of the difficulties in the credit markets and fewer sources of capital for middle market companies, we see opportunities for improved risk-adjusted returns. Furthermore, we believe with a large pool of uninvested private equity capital seeking debt capital to complete transactions and a substantial supply of refinancing opportunities, there is an opportunity to attain appealing risk-adjusted returns with debt investments. See [Business](#) for more information.

Competitive Advantages

We believe that we have competitive advantages over other capital providers in middle-market companies, such as a management team with an average of over 20 years of experience, a disciplined investment approach with strong value orientation, an ability to source and evaluate transactions through our Investment Adviser's research capability and established network and flexible transaction structuring that allows for us to invest across the capital structure coupled with a longer investment horizon with an attractive publicly traded model. See [Business](#) for more information.

Competition

Our primary competitors provide financing to middle-market companies and include other BDCs and closed-end funds, commercial and investment banks, commercial finance companies, collateralized loan obligation, or CLO, funds and, to the extent they provide an alternative form of financing, private equity funds. Additionally, alternative investment vehicles, such as hedge funds, frequently invest in middle-market companies. As a result, competition for investment opportunities in middle-market companies can be intense. However, we believe that there has been a reduction in the amount of debt capital available to middle-market companies since the downturn in the credit markets. We believe this has resulted in a less competitive environment for making new investments. See [Risk Factors](#) [Risks Relating to our Business and Structure](#) [We operate in a highly competitive market for investment opportunities](#) for more information.

Leverage

We maintain a five-year, \$100.0 million Credit Facility, which matures on June 23, 2016, with SunTrust Robinson Humphrey, Inc., or STRH. During the Credit Facility's first three years, or the revolving period, it bears interest at a commercial paper rate that approximates LIBOR plus 225 basis points, and after the revolving period, the rate sets to LIBOR plus 425 basis points for the remaining two years. The Credit Facility is secured by all of the assets held by Funding I, under which we had drawn \$47.8 million outstanding with a weighted average interest rate of 2.54%, excluding the unused commitment fee of 0.50%, as of March 31, 2012. The Credit Facility permits, subject to satisfaction of certain conditions, an accordion feature whereby the Credit Facility can be expanded to \$600.0 million. We believe that our capital resources provide us with the flexibility to take advantage of market opportunities when they arise. See [Management's Discussion and Analysis of Financial Condition and Results of Operations](#) [Liquidity and Capital Resources](#) for more information.

Operating and Regulatory Structure

Our investment activities are managed by PennantPark Investment Advisers and supervised by our board of directors, a majority of whom are independent of us. Under our investment management agreement, or the Investment Management Agreement, we have agreed to pay our Investment Adviser an annual base management fee based on our average adjusted gross assets as well as an incentive fee based on our investment performance. See [Certain Relationships and Transactions](#) [Investment Management Agreement](#) for more information.

We have also entered into an administration agreement, or the Administration Agreement, with the Administrator. Under our Administration Agreement, we have agreed to reimburse the Administrator for our allocable portion of overhead and other expenses incurred by the Administrator in performing its obligations under our Administration Agreement, including rent and our allocable portion of the costs of compensation and related expenses of our chief compliance officer, chief financial officer and their respective staffs. See [Certain Relationships and Transactions](#) [Administration Agreement](#) for more information.

Table of Contents

As a BDC, we are required to comply with certain regulatory requirements. Also, while we are permitted to finance investments using debt, our ability to use debt is limited in certain significant respects. See Regulation for more information.

Use of Proceeds

We may use the net proceeds from selling securities pursuant to this prospectus to reduce our then-outstanding obligations under our Credit Facility, to invest in new or existing portfolio companies, to capitalize a subsidiary or for other general corporate purposes. Any supplements to this prospectus relating to an offering will more fully identify the use of the proceeds from such offering. See Use of Proceeds for information regarding our outstanding borrowings, the corresponding interest rate charged on such borrowings and the length of time that it may take us to invest any proceeds in new or existing portfolio companies.

Dividends on Common Stock

We intend to continue to distribute monthly dividends to our common stockholders. Our monthly dividends, if any, are determined by our board of directors. See Distributions for more information.

Dividends on Preferred Stock

We may issue preferred stock from time to time, although we have no immediate intention to do so. Any such preferred stock will be a senior security for purposes of the 1940 Act and, accordingly, subject to the leverage test under that Act. If we issue shares of preferred stock, holders of such preferred stock will be entitled to receive cash dividends at an annual rate that will be fixed or will vary for the successive dividend periods for each series. In general, the dividend periods for fixed rate preferred stock can range from weekly to quarterly and is subject to extension. The dividend rate could be variable and determined for each dividend period. See Risk Factors Risks Relating To Our Business and Structure for more information.

Dividend Reinvestment Plan

We have adopted an opt-out dividend reinvestment plan that provides for reinvestment of our dividend distributions on behalf of our stockholders unless a stockholder elects to receive cash. As a result, if our board of directors authorizes, and we declare, a cash dividend, then our stockholders who have not opted out of our dividend reinvestment plan will have their cash dividends automatically reinvested in additional shares of our common stock rather than receiving the cash dividends. Registered stockholders must notify our transfer agent in writing if they wish to opt-out of the dividend reinvestment plan. See Dividend Reinvestment Plan for more information.

Plan of Distribution

We may offer, from time to time, up to \$150 million of our securities, on terms to be determined at the time of each such offering and set forth in a supplement to this prospectus.

Securities may be offered at prices and on terms described in one or more supplements to this prospectus. We may sell our securities through underwriters or dealers, at-the-market to or through a market maker, into an existing trading market or otherwise directly to one or more purchasers or through agents or through a combination of methods of sale. The supplement to this prospectus relating to the offering will identify any agents or underwriters involved in the sale of our securities, and will set forth any applicable purchase price, fee and commission or discount arrangement or the basis upon which such amount may be calculated. In compliance with the guidelines of the Financial Industry Regulatory Authority, Inc., or FINRA, the compensation to the underwriters or dealers in connection with the sale of our securities pursuant to this prospectus and the accompanying supplement to this prospectus may not exceed 8% of the aggregate offering price of the securities as set forth on the cover page of the supplement to this prospectus.

We may not sell securities pursuant to this prospectus without delivering a prospectus supplement describing the terms of the particular securities to be offered and the method of the offering of such securities. See Plan of Distribution for more information.

Our Corporate Information

Our administrative and principal executive offices are located at 590 Madison Avenue, 15th Floor, New York, NY 10022. Our common stock is quoted on the NASDAQ Global Select Market under the symbol PFLT. Our phone number is (212) 905-1000, and our Internet website address is www.pennantpark.com. Information contained on our website is not incorporated by reference into this prospectus or any supplements to this prospectus, and you should not consider information contained on our website to be part of this prospectus or any supplements to this prospectus. We file periodic reports, proxy statements and other information with the SEC. You may read and copy the materials that we file with the SEC at the SEC's Public Reference Room at 100 F Street, N.E., Washington, D.C. 20549. You may obtain information on the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. In addition, the SEC maintains an internet site at www.sec.gov that contains material that we file with the SEC on the EDGAR Database.

Table of Contents

FEES AND EXPENSES

The following table will assist you in understanding the various costs and expenses that an investor in shares of our common stock will bear directly or indirectly. However, we caution you that some of the percentages indicated in the table below are estimates and may vary. The following table should not be considered a representation of our future expenses. Actual expenses may be greater or less than shown. Except where the context suggests otherwise, whenever this prospectus contains a reference to fees or expenses paid by you or us or that we will pay, stockholders will indirectly bear such fees or expenses as investors in us.

Stockholder transaction expenses (as a percentage of offering price)

1.45 %(6)

Other expenses

2.17 %(7)

Total estimated annual expenses

5.38 %(8)

(1) In the event that the securities to which this prospectus relates are sold to or through underwriters or agents, a corresponding prospectus supplement will disclose the applicable sales load.

(2) The related prospectus supplement will disclose the estimated amount of offering expenses, the offering price and the offering expenses borne by us as a percentage of the offering price.

(3) Net assets attributable to common shares equals average net assets as of March 31, 2012.

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

- (4) The contractual management fee is calculated at an annual rate of 1.00% of our average adjusted gross assets on March 31, 2012. See [Certain Relationships and Transactions-Investment Management Agreement](#) for more information.
- (5) The portion of incentive fees paid with respect to net investment income is based on actual amounts incurred and payable under our Investment Management Agreement during the three months ended March 31, 2012, annualized for a full year. Such incentive fees are based on performance, vary from year to year and are not paid unless our performance exceeds specified thresholds. Incentive fees in respect of net investment income do not include incentive fees in respect of net capital gains. The portion of our incentive fee paid in respect of net capital gains is determined and payable in arrears as of the end of each calendar year (or upon termination of the Investment Management Agreement, as of the termination date) and equals 20.0% of our realized capital gains, if any, on a cumulative basis from inception through the end of each calendar year, computed net of all realized capital losses and unrealized capital depreciation on a cumulative basis, less the aggregate amount of any previously paid capital gain incentive fees. As of March 31, 2012, our unrealized capital gains exceeded our cumulative realized and unrealized capital losses and we accrued a capital gains incentive fee of \$0.1 million in accordance with U.S. generally accepted accounting principles, or GAAP. However, Incentive fees payable under the Investment Management Agreement includes an accrual for capital gains incentive fee for the three months ended March 31, 2012 even though no capital gains incentive fee was payable under our Investment Management Agreement as of March 31, 2012. As we cannot predict our future net investment income or capital gains, the incentive fee paid in future periods, if any, may be substantially different than the fee earned during the three months ended March 31, 2012, and we cannot assure you that we will recognize capital gains for the calendar year ending December 31, 2012 in amounts consistent with the accrual for the same period. For more detailed information about the incentive fee, please see [Certain Relationships and Transactions Investment Management Agreement](#) for more information.
- (6) As of March 31, 2012, we had \$47.8 million in borrowings outstanding under our \$100.0 million Credit Facility. We may use proceeds of an offering of securities under this registration statement to repay outstanding obligations under our Credit Facility. After completing any such offering, we may continue to borrow under our Credit Facility to finance our investment objectives. We have estimated the annual interest expense on borrowed funds and caution you that our actual interest expense will depend on prevailing interest rates and our rate of borrowing, which may be substantially higher than the estimate provided in this table. See [Risk Factors Risks Relating To Our Business and Structure](#) We currently use borrowed funds to make investments and are exposed to the typical risks associated with leverage for more information.
- (7) Other expenses includes our general and administrative expenses, professional fees, directors fees, insurance costs, expenses of our dividend reinvestment plan and the expenses of the Investment Adviser reimbursable under our Investment Management Agreement and of the Administrator reimbursable under our Administration Agreement. Such expenses are based on actual other expenses for the three months ended March 31, 2012 annualized for a full year. See the Consolidated Statement of Operations in our Consolidated Financial Statements.
- (8) Total annual expenses as a percentage of net assets attributable to common shares, to the extent we borrow money to make investments, are higher than the total annual expenses percentage would be for a company that is not leveraged. We may borrow money to leverage our net assets and increase our total assets. The SEC requires that the total annual expenses percentage be calculated as a percentage of net assets (defined as total assets less indebtedness) rather than total assets, which include assets that have been funded with borrowed money. For a presentation and calculation of total annual expenses based on average total assets, see page 29 of this prospectus.

Table of Contents

Example

The following example illustrates the projected dollar amount of total cumulative expenses that you would pay on a \$1,000 hypothetical investment in common shares, assuming (1) a 3.22% sales load (underwriting discounts and commissions) and offering expenses totaling 0.32%, (2) total net annual expenses of 5.07% of average net assets attributable to common shares as set forth in the table above (other than performance-based incentive fees) and (3) a 5% annual return:

	1 Year	3 Years	5 Years	10 Years
Total expenses incurred	\$ 84	\$ 182	\$ 279	\$ 523

This example and the expenses in the table above should not be considered a representation of our future expenses. Actual expenses may be greater or less than those assumed. The table above is provided to assist you in understanding the various costs and expenses that an investor in our common stock will bear directly or indirectly. While the example assumes, as required by the SEC, a 5% annual return, our performance will vary and may result in a return greater or less than 5%. Assuming a 5% annual return, the incentive fee under our Investment Management Agreement would not be earned or payable and is not included in the example. If we achieve sufficient returns on our investments, including through the realization of capital gains, to trigger an incentive fee of a material amount, our expenses, and returns to our investors, would be higher. The example assumes that all dividends and distributions are reinvested at net asset value. Under certain circumstances, reinvestment of dividends and distributions under our dividend reinvestment plan may occur at a price per share that differs from net asset value. See [Distributions](#) for more information.

Table of Contents

RISK FACTORS

Before you invest in our securities, you should be aware of various risks, including those described below. You should carefully consider these risk factors, together with all of the other information included in this prospectus and the accompanying prospectus supplement, if any, before you decide whether to make an investment in our securities. The risks set out below are not the only risks we face. Additional risks and uncertainties not currently known to us or that we currently deem to be immaterial also may materially adversely affect our business, financial condition and/or operating results. If any of the following events occur, our business, financial condition and results of operations could be materially adversely affected. In such case, our net asset value and the trading price of our common stock could decline or the value of our preferred stock, warrants, subscription rights or debt securities, may decline, and you may lose all or part of your investment.

RISKS RELATING TO OUR BUSINESS AND STRUCTURE

We are a new company with a limited operating history.

We were incorporated in October 2010 and commenced operations in March 2011. We are subject to all of the business risks and uncertainties associated with any new business, including the risk that we will not achieve our investment objective and that the value of your investment could decline substantially.

Global capital markets could enter a period of severe disruption and instability. These market conditions have historically and could again materially and adversely affect debt and equity capital markets in the United States, which could have a materially negative impact on our business, financial condition and results of operations.

The U.S. capital markets have experienced a period of disruption characterized by the freezing of credit, a lack of liquidity in the debt capital markets, significant losses in the principal value of investments, the re-pricing of credit risk in the broadly syndicated credit market and the failure of major financial institutions. During this period of disruption, general economic conditions deteriorated with material and adverse consequences for the broader financial and credit markets, and the availability of debt and equity capital for the market as a whole, and financial services firms in particular, was reduced significantly. These conditions may reoccur for a prolonged period of time again or materially worsen in the future. We may in the future have difficulty accessing debt and equity capital, and a severe disruption and instability in the global financial markets or deterioration in credit and financing conditions could have a material adverse effect on our business, financial condition and results of operations.

Volatility or a prolonged disruption in the credit markets could materially damage our business.

We are required to record our assets at fair value, as determined in good faith by our board of directors in accordance with our valuation policy. As a result, volatility in the capital markets may materially adversely affect our valuations and our net asset value, even if we intend to hold investments to maturity. Volatility or dislocation in the capital markets may depress our stock price below our net asset value per share and create a challenging environment in which to raise debt and equity capital. As a BDC, we are generally not able to issue additional shares of our common stock at a price less than our net asset value without first obtaining approval for such issuance from our stockholders and our independent directors. Additionally, our ability to incur indebtedness is limited by applicable regulations, such that our asset coverage, as defined under the 1940 Act, must equal at least 200% of our total indebtedness immediately after each time we incur indebtedness. Shrinking portfolio values negatively impact our ability to borrow additional funds under the Credit Facility because our net asset value is reduced for purposes of the 200% asset coverage test. If the fair value of our assets declines substantially, we may fail to maintain the asset coverage ratios stipulated by the 1940 Act, which could, in turn, cause us to lose our status as a BDC and materially impair our business operations. A protracted disruption in the credit markets could also materially decrease demand for our investments.

The significant disruption in the capital markets experienced in the past may in the future have a negative effect on the valuations of our investments and on the potential for liquidity events involving our investments. The debt capital that will be available to us may be at a higher cost and/or on less favorable terms and conditions than those currently used. A prolonged inability to raise capital may require us to reduce the volume of Floating Rate Loans we invest in and could have a material adverse impact on our business, financial condition or results of operations. This may also increase the probability that other structural risks negatively impact us. These situations may arise due to circumstances that we may be unable to control, such as a protracted disruption in the credit markets, a severe decline in the value of the U.S. dollar, a sharp economic downturn or an operational problem that affects third parties or us, and could materially damage our business, financial condition or results of operations.

Any unrealized losses we experience on our investment portfolio may be an indication of future realized losses, which could reduce our income available for distribution.

As a BDC, we are required to carry our investments at market value or, if no market value is ascertainable or if market value does not reflect the fair value of such investment in the bona fide determination of our board of directors, then we would carry our investments, at fair value as determined in good faith by or under the direction of our board of directors. Decreases in the market values or fair values of our investments will be recorded as unrealized depreciation. Unrealized losses of any given portfolio company could be an indication of such company's inability in the future to meet its repayment obligations to us. If the fair value of our portfolio companies reflects future realized losses, this would ultimately result in reductions of our income available for distribution in future periods and could materially harm our results of operations and cause a material decline in the value of our securities.

Table of Contents

We incur credit risk when we loan money or commit to loan money to a portfolio company.

Our primary business exposes us to credit risk, and the quality of our portfolio has a significant impact on our earnings. Credit risk is a component part of our fair valuation of our Floating Rate Loans and other investments we may purchase. Negative credit events will lead to a decrease in the fair value of our Floating Rate Loans and other investments.

In addition, current market conditions have affected consumer confidence levels, which may result in adverse changes in payment patterns. Increased delinquencies and default rates would impact our results of operations. Deterioration in the credit quality of our portfolio could have a material adverse effect on our capital, financial condition and results of operations.

Following periods of volatility in the market price of a company's securities, securities class action litigation has often been brought against that company.

If our stock price fluctuates significantly, we may be the target of securities litigation in the future. Securities litigation could result in substantial costs and divert management's attention and resources from our business and cause a material adverse effect on our business, financial condition or results of operations.

Our borrowers may default on their payments, which may have a materially negative effect on our financial performance.

We invest in Floating Rate Loans, which may involve a high degree of repayment risk. We invest in companies that may have limited financial resources, may be highly leveraged and may be unable to obtain financing from traditional sources. Accordingly, a general economic downturn or severe tightening in the credit markets could materially negatively impact the ability of our borrowers to repay their loans, which could materially damage our business. Numerous other factors may affect a borrower's ability to repay its loan, including the failure to meet its business plan or a downturn in its industry. A portfolio company's failure to satisfy financial or operating covenants imposed by us or other lenders could lead to defaults and, potentially, termination of its loans or foreclosure on the secured assets. This could trigger cross-defaults under other agreements and jeopardize our portfolio company's ability to meet its obligations under the loans or debt securities that we hold. In addition, our portfolio companies may have, or may be permitted to incur, other debt that ranks senior to or equally with our securities. This means that payments on such senior-ranking securities may have to be made before we receive any payments on our subordinated loans or debt securities. Deterioration in a borrower's financial condition and prospects may be accompanied by deterioration in any related collateral and may have a materially adverse effect on our financial condition and results of operations.

We are dependent upon our Investment Adviser's key personnel for our future success, and if we are or our Investment Adviser is unable to hire and retain qualified personnel or if we lose any member of our management team, our ability to achieve our investment objectives could be significantly harmed.

We depend on the diligence, skill and network of business contacts of the investment professionals of the Investment Adviser. We also depend, to a significant extent, on PennantPark Investment Advisers' access to the investment information and deal flow generated by these investment professionals and any others that may be hired by the Investment Adviser. Managers of the Investment Adviser evaluate, negotiate, structure, close and monitor our investments. Our future success depends on the continued service of management personnel of the Investment Adviser. The departure of managers of the Investment Adviser could have a material adverse effect on our ability to achieve our investment objectives. In addition, we can offer no assurance that PennantPark Investment Advisers will remain our Investment Adviser. The Investment Adviser has the right, under the Investment Management Agreement, to resign at any time upon 60 days' written notice, whether we have found a replacement or not.

Our financial condition and results of operation depends on our ability to manage future growth effectively.

Our ability to achieve our investment objectives depend on our ability to grow, which depends, in turn, on the Investment Adviser's ability to identify, invest in and monitor companies that meet our investment criteria. Accomplishing this result on a cost-effective basis is largely a function of the Investment Adviser's structuring of the investment process, its ability to provide competent, attentive and efficient services to us and our access to financing on acceptable terms. The management team of PennantPark Investment Advisers has substantial responsibilities under the Investment Management Agreement. In order to grow, the Investment Adviser will need to hire, train, supervise and manage new employees. However, we can offer no assurance that any such employees will contribute effectively to the work of the Investment Adviser. We caution you that the principals of the Investment Adviser or Administrator may also be called upon to provide and currently do provide managerial assistance to portfolio companies and other investment vehicles, including other BDCs, which are managed by the Investment Adviser. Such demands on their time may distract them or slow our rate of investment. Any failure to manage our future growth effectively could have a material adverse effect on our business, financial condition and results of operations.

Table of Contents

We operate in a highly competitive market for investment opportunities.

A number of entities compete with us to make the types of investments that we make in middle-market companies. We compete with public and private funds, including other BDCs and closed-end funds, commercial and investment banks, commercial financing companies, CLO funds and, to the extent they provide an alternative form of financing, private equity funds. Additionally, alternative investment vehicles, such as hedge funds, also invest in middle-market companies. As a result, competition for investment opportunities at middle-market companies can be intense. Many of our potential competitors are substantially larger and have considerably greater financial, technical and marketing resources than we do. For example, we believe some competitors have a lower cost of funds and access to funding sources that are not available to us. In addition, some of our competitors have higher risk tolerances or different risk assessments, which could allow them to consider a wider variety of investments and establish more relationships than us. Furthermore, many of our competitors are not subject to the regulatory restrictions that the 1940 Act will impose on us as a BDC. We cannot offer any assurances that the competitive pressures we face will not have a material adverse effect on our business, financial condition and results of operations. Also, as a result of this competition, we may not be able to take advantage of attractive investment opportunities from time to time, and we can offer no assurance that we will be able to identify and make investments that are consistent with our investment objectives.

Participants in our industry compete on several factors, including price, flexibility in transaction structuring, customer service, reputation, market knowledge and speed in decision-making. We will not seek to compete primarily based on the interest rates we offer, and we believe that some of our competitors may make loans with interest rates that are lower than the rates we offer. We may lose investment opportunities if we do not match our competitors' pricing, terms and structure. However, if we match our competitors' pricing, terms and structure, we may experience decreased net interest income and increased risk of credit loss.

We may not replicate the historical performance of other investment companies with which our investment professionals have been affiliated.

The 1940 Act imposes numerous constraints on the investment activities of BDCs. For example, BDCs are required to invest at least 70% of their total assets primarily in securities of U.S. private companies or thinly traded public companies with a market capitalization of less than \$250 million, cash, cash equivalents, U.S. government securities and high-quality debt investments that mature in one year or less. These constraints may hinder the Investment Adviser's ability to take advantage of attractive investment opportunities and to achieve our investment objectives. Current market conditions and the depressed economic cycle present significant challenges to us that have not been present in recent years, if ever. In addition, the investment philosophy and techniques used by the Investment Adviser may differ from those used by other investment companies advised by the Investment Adviser. Accordingly, we can offer no assurance that we will replicate the historical performance of other investment companies with which our investment professionals have been affiliated, and we caution that our investment returns could be substantially lower than the returns achieved by such other companies.

Any failure on our part to maintain our status as a business development company would reduce our operating flexibility.

We have elected to be treated as a BDC. If we do not remain a BDC, we might be regulated as a closed-end investment company under the 1940 Act, which would subject us to substantially more regulatory restrictions under the 1940 Act and correspondingly decrease our operating flexibility, which could have a material adverse effect on our business, financial condition and results of operations.

Loss of RIC tax status would substantially reduce net assets and income available for debt service and dividends.

We have operated and intend to operate so as to qualify as a RIC under Subchapter M of the Code commencing with our first taxable year. If we meet source of income, quarterly asset diversification, and distribution requirements, we generally will not be subject to corporate-level income taxation on income we timely distribute, or deem to distribute, to our stockholders as dividends. We would cease to qualify for such tax treatment if we were unable to comply with these requirements. In addition, we may have difficulty meeting the requirement to make distributions to our stockholders because in certain cases we may recognize income before or without receiving cash representing such income. If we fail to qualify as a RIC, we will have to pay corporate-level taxes on all of our income whether or not we distribute it, which would substantially reduce the amount of income available for debt service as well as reduce and/or affect the character and amount of our distributions to our stockholders. Even if we qualify as a RIC, we generally will be subject to a corporate-level income tax on the income or gains we do not distribute. If we do not distribute an amount at least equal to the sum of 98% of our ordinary income (during the calendar year) plus 98.2% of our net capital gain income (during each 12-month period ending on October 31), we generally will be required to pay an excise tax on amounts carried over and distributed to shareholders in the next year equal to 4% of the undistributed amount.

We may have difficulty paying our required distributions if we recognize income before or without receiving cash representing such income.

For federal income tax purposes, we include in income certain amounts that we have not yet received in cash, such as original issue discount, or OID, or contracted payment-in-kind, or PIK, interest, which represents contractual interest added to the loan balance and due at the end of the loan term. Original issue discount, which could be significant relative to our overall investment assets, and increases in loan balances as a result of contracted PIK interest will be included in income before we receive any corresponding cash payments. We also may be required to include in income certain other amounts that we will not receive in cash.

The part of the incentive fee payable by us that relates to our net investment income is computed and paid on income that may include interest that has been accrued but not yet received in cash. If a portfolio company defaults on a loan that is structured to provide accrued interest, it is possible that accrued interest previously used in the calculation of the incentive fee will become uncollectible.

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

In some cases we may recognize income before or without receiving cash representing such income. As a result, we may have difficulty meeting the tax requirement to distribute at least 90% of the sum of our ordinary income and realized net short-term capital gains, if any, to obtain RIC tax benefits. Accordingly, we may have to sell some of our investments at times we would not consider advantageous, raise additional debt or equity capital or reduce new investment originations to meet these distribution requirements which could have a material adverse effect on our business, financial condition and results of operations. If we are not able to obtain cash from other sources, we may fail to qualify for RIC tax benefits and thus be subject to corporate level income tax.

Table of Contents

Because we intend to distribute substantially all of our income to our stockholders to maintain our status as a RIC, we will need to raise additional capital to finance our growth. If funds are not available to us, we may need to curtail new investments, and our common stock value could decline.

In order to satisfy the requirements applicable to a RIC, we intend to distribute to our stockholders substantially all of our net ordinary income and net capital gain income except for certain net long-term capital gains, some or all of which we may retain, pay applicable income taxes with respect thereto and elect to treat as deemed distributions to our stockholders. As a BDC, we generally are required to meet a coverage ratio of total assets to total senior securities, which includes all of our borrowings, of at least 200% of indebtedness. This requirement limits the amount we may borrow. If the value of our assets declines, we may be unable to satisfy this test. If that happens, we may be required to sell a portion of our investments or sell additional common stock and, depending on the nature of our leverage, to repay a portion of our indebtedness at a time when such sales and repayments may be disadvantageous. In addition, the issuance of additional securities could dilute the percentage ownership of our current stockholders in us.

We will be partially dependent on our subsidiary Funding I for cash distributions to enable us to meet the RIC distribution requirements. Funding I may be limited by its covenants from making certain distributions to us that may be necessary to maintain our status as a RIC. We may have to request a waiver of these covenants restrictions for Funding I to make certain distributions to maintain our RIC status. We cannot assure you that Funding I will be granted such a waiver and if Funding I is unable to obtain a waiver, compliance with the covenants may result in an entity-level tax on us.

Regulations governing our operation as a BDC will affect our ability to, and the way in which we, raise additional capital.

Our business requires a substantial amount of capital. We may acquire additional capital from the issuance of senior securities or other indebtedness, the issuance of additional shares of our common stock, the issuance of warrants or subscription rights to purchase certain of our securities, or from securitization transactions. However, we may not be able to raise additional capital in the future on favorable terms or at all. We may issue debt securities or preferred securities, which we refer to collectively as senior securities, and we may borrow money from banks, or other financial institutions, up to the maximum amount permitted by the 1940 Act. The 1940 Act permits us to issue senior securities or incur indebtedness only in amounts such that our asset coverage, as defined in the 1940 Act, equals at least 200% after such issuance or incurrence. Our ability to pay dividends, incur additional indebtedness or issue additional senior securities would be restricted if our asset coverage ratio were not at least 200%. If the value of our assets declines, we may be unable to satisfy this test. If that happens, we may be required to liquidate a portion of our investments and repay a portion of our indebtedness or redeem a portion of our senior securities, as applicable, at a time when such sales may be disadvantageous, which could materially damage our business.

Senior Securities. As a result of issuing senior securities, we would also be exposed to typical risks associated with leverage, including an increased risk of loss. If we issue preferred securities, they would rank senior to common stock in our capital structure. Preferred stockholders would have separate voting rights and may have rights, preferences or privileges more favorable than those of holders of our common stock. Furthermore, the issuance of preferred securities could have the effect of delaying, deferring or preventing a transaction or a change of control that might involve a premium price for our common stockholders or otherwise be in your best interest. Our senior securities may include conversion features that cause them to bear risks more closely associated with an investment in our common stock.

Additional Common Stock. Our board of directors may decide to issue common stock to finance our operations rather than issuing debt or other senior securities. As a BDC, we are generally not able to issue our common stock at a price below net asset value without first obtaining required approvals from our stockholders and our board of directors. Also, subject to the requirements of the 1940 Act, we may issue rights to acquire our common stock at a price below the current net asset value of the common stock if our board of directors determines that such sale is in our best interests and the best interests of our common stockholders. In any such case, the price at which our securities are to be issued and sold may not be less than a price, that in the determination of our board of directors, closely approximates the market value of such securities. If we raise additional funds by issuing more common stock or warrants or senior securities convertible into, or exchangeable for, our common stock, the percentage ownership of our common stockholders at that time would decrease, and our common stockholders may experience dilution.

Securitization. In addition to issuing securities to raise capital as described above, we anticipate that in the future, as market conditions permit, we may securitize our loans to generate cash for funding new investments. To securitize loans, we may create a wholly-owned subsidiary, contribute a pool of loans to the subsidiary and have the subsidiary issue primarily investment grade debt securities to purchasers who we would expect to be willing to accept a substantially lower interest rate than the loans earn. Even though we expect the pool of loans that we contribute to any such securitization vehicle to be rated below investment grade, because the securitization vehicle's portfolio of loans would secure all of the debt issued by such vehicle, a portion of such debt may be rated investment grade, subject in each case to market conditions that may require such portion of the debt to be over collateralized and various other restrictions. If applicable accounting pronouncements or SEC staff guidance requires us to consolidate the securitization vehicle's financial statements with our financial statements any debt issued by it would be generally treated as if it were issued by us for purposes of the asset coverage test applicable to us. In such case, we would expect to retain all or a portion of the equity and/or subordinated notes in the securitization vehicle. Our retained equity would be exposed to any losses on the portfolio of loans before any of the debt securities would be exposed to such losses. Accordingly, if the pool of loans experienced a low level of losses due to defaults, we would earn an incremental amount of income on our retained equity but we would be exposed, up to the amount of equity we retained, to that proportion of any losses we would have experienced if we had continued to hold the loans in our portfolio. We may hold subordinated debentures in any such securitization vehicle and, if so, we would not consider such securities to be senior securities. An inability to successfully securitize our loan portfolio could limit our ability to grow our business and fully execute our business strategy and adversely

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

affect our earnings, if any. Moreover, the successful securitization of a portion of our loan portfolio might expose us to losses as the residual loans in which we do not sell interests will tend to be those that are riskier and more apt to generate losses.

Table of Contents

We currently use borrowed funds to make investments and are exposed to the typical risks associated with leverage.

Because we borrow funds, through Funding I, to make investments we are exposed to increased risk of loss due to our use of debt to make investments. A decrease in the value of our investments will have a greater negative impact on the net asset value attributable to our common stock than it would if we did not use debt. Our ability to pay distributions is restricted when our asset coverage ratio is not at least 200%, and any amounts that we use to service our indebtedness are not available for distribution to our common stockholders.

Our current debt is governed by the terms of the Credit Facility and may in the future be governed by an indenture or other instrument containing covenants restricting our operating flexibility. We, and indirectly our stockholders, bear the cost of issuing and servicing debt. Any convertible or exchangeable securities that we issue in the future may have rights, preferences and privileges more favorable than those of our common stock.

Funding I may fail to meet certain asset coverage tests, which would have an adverse effect on the timing of payments to us, or otherwise fail to satisfy various covenants.

Under the documents governing the Credit Facility, there are two coverage tests applicable to Funding I. For example, the income coverage test compares the amount of interest received on the portfolio loans held by Funding I to the amount of interest payable to the Lender and certain other expenses. To meet this test, the aggregate amount of interest received on the portfolio loans must equal at least 125% of the interest payable in respect to the Lender and other parties. If these coverage tests are not satisfied on any date on which compliance is measured, Funding I will be required to apply any available funds to the repayment of principal under the Credit Facility to the extent necessary to satisfy the applicable coverage tests.

In addition to the applicable asset coverage test that restricts our ability to borrow under Funding I's Credit Facility, the various covenants which, if not complied with, could accelerate repayment under the Credit Facility, thereby materially and adversely affecting our liquidity, financial condition and results of operations. Funding I's borrowings under the Credit Facility are collateralized by the assets in Funding I's investment portfolio. The agreements governing the Credit Facility require Funding I to comply with certain financial and operational covenants. These covenants include:

A requirement to retain our status as a BDC;

A requirement to maintain a minimum amount of shareholder's equity; and

A requirement that our outstanding borrowings under the Credit Facility not exceed a certain percentage of the values of our portfolio companies. Our continued compliance with these covenants depends on many factors, some of which are beyond our control. Material net asset devaluation resulting from under performance or defaults in connection with additional borrowings could result in an inability to comply with our obligation to restrict the level of indebtedness that we are able to incur in relation to the value of our assets or to maintain a minimum level of shareholders' equity. This could have a material adverse effect on our operations, as it would trigger mandatory pre-payment obligations under the terms of the Credit Facility.

If we incur additional debt, it could increase the risk of investing in our shares.

We have indebtedness outstanding pursuant to our Credit Facility and expect in the future to borrow additional amounts under our Credit Facility and, subject to market availability and satisfaction of certain conditions, to increase the size of our Credit Facility. Lenders have fixed dollar claims on our assets that are superior to the claims of our common stockholders or preferred stockholders, if any, and we have granted a security interest in Funding I's assets in connection with our Credit Facility borrowings. In the case of a liquidation event, those lenders would receive proceeds before our stockholders. Leverage is generally considered a speculative investment technique. If the value of our assets decreases, leveraging would cause the net asset value attributable to our common stock to decline more than it otherwise would have had we not utilized leverage. Similarly, any decrease in our revenue would cause our net income to decline more than it would have had we not borrowed funds and could negatively affect our ability to make distributions on our common or preferred stock. Our ability to service any debt that we incur depends largely on our financial performance and is subject to prevailing economic conditions and competitive pressures.

As of March 31, 2012, we had outstanding borrowings of \$47.8 million under our Credit Facility with a weighted average annual interest rate on of 2.54% exclusive of the fees on the undrawn commitment of 0.50%. Accordingly, to cover the annual interest on our borrowings outstanding at March 31, 2012, at the then current rate, we would have to receive an annual yield of at least 0.84%. This example is for illustrative purposes only, and actual interest rates on our Credit Facility borrowings are likely to fluctuate. The costs associated with our borrowings, including any increase in the management fee payable to our Investment Adviser, will be borne by our common stockholders.

The following table is designed to illustrate the effect on return to a holder of our common stock of the leverage created by our use of borrowing at March 31, 2012 of 31% of total assets (including such borrowed funds), at a weighted average rate at the time of 2.54%, and assuming hypothetical annual returns on our portfolio of minus 10 to plus 10 percent. The table also assumes that we will maintain a constant level and weighted average rate of leverage. The amount of leverage that we use will vary from time to time. As can be seen, leverage generally increases the return to stockholders when the portfolio return is positive and

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

decreases return when the portfolio return is negative. Actual returns may be greater or less than those appearing in the table.

Assumed return on portfolio (net of expenses) ⁽¹⁾	(10.0)%	(5.0)%	5.0%	10.0%	
Corresponding return to common stockholders ⁽²⁾	(16.9)%	(9.1)%	(1.3)%	6.6%	14.4%

(1) The assumed portfolio return is required by regulation of the SEC and is not a prediction of, and does not represent, our projected or actual performance.

(2) In order to compute the corresponding return to common stockholders, the assumed return on portfolio is multiplied by the total value of our assets at the beginning of the period to obtain an assumed return to us. From this amount, all interest expense expected to be accrued during the period is subtracted to determine the return available to stockholders. The return available to stockholders is then divided by the total value of our net assets as of the beginning of the period to determine the corresponding return to common stockholders.

Table of Contents

We are exposed to risks associated with changes in interest rates that may affect our cost of capital and net investment income.

Since we borrow money to make investments, our net investment income depends, in part, upon the difference between the rate at which we borrow funds and the rate at which we invest those funds. As a result, we can offer no assurance that a significant change in market interest rates will not have a material adverse effect on our net investment income. In periods of rising interest rates, our cost of funds will increase, which could reduce our net investment income. We may use interest rate risk management techniques, such as total return swaps and interest rate swaps, in an effort to limit our exposure to interest rate fluctuations. These techniques may include various interest rate hedging activities to the extent permitted by the 1940 Act. These activities may limit our ability to participate in the benefits of lower interest rates with respect to the hedged portfolio. Adverse developments resulting from changes in interest rates or hedging transactions could have a material adverse effect on our business, financial condition and results of operations. Also, we have limited experience in entering into hedging transactions, and we will initially have to purchase or develop such expertise. See Management Discussion and Analysis of Financial Condition and Results of Operations Quantitative and Qualitative Disclosures about Market Risk for more information.

A rise in the general level of interest rates can be expected to lead to higher interest rates applicable to our debt investments. Accordingly, an increase in interest rates would make it easier for us to meet or exceed the incentive fee hurdle and may result in a substantial increase of the amount of incentive fees payable to our Investment Adviser with respect to Pre-Incentive Fee Net Investment Income.

General interest rate fluctuations may have a substantial negative impact on our investments, the value of our common stock and our rate of return on invested capital. A reduction in the interest rates on new investments relative to interest rates on current investments could also have an adverse impact on our net interest income. An increase in interest rates could decrease the value of any investments we hold which earn fixed interest rates and also could increase our interest expense on any variable-rate borrowings, thereby decreasing our net income. Also, an increase in interest rates available to investors could make investment in our common stock less attractive if we are not able to increase our dividend rate, which could reduce the value of our common stock.

We may in the future determine to fund a portion of our investments with preferred stock, which would magnify the potential for loss and the risks of investing in us in the same way as our borrowings.

Preferred stock, which is another form of leverage, has the same risks to our common stockholders as borrowings because the dividends on any preferred stock we issue must be cumulative. If we issue preferred securities they would rank senior to common stock in our capital structure. Payment of dividends on, and repayment of the liquidation preference of, such preferred stock would typically take preference over any dividends or other payments to our common stockholders. Also, preferred stockholders are not, typically, subject to any of our expenses or losses and are not entitled to participate in any income or appreciation in excess of their stated preference. Furthermore, preferred stockholders would have separate voting rights and may have rights, preferences or privileges more favorable than those of our common stock. Also, the issuance of preferred securities could have the effect of delaying, deferring or preventing a transaction or a change of control that might involve a premium price for our common stockholders or otherwise be in your best interest.

We may in the future determine to fund a portion of our investments with debt securities, which would magnify the potential for loss and the risks of investing in us in the same way as our borrowings.

As a result of an issuance of debt securities, we would be exposed to typical risks associated with leverage, including an increased risk of loss and an increase in expenses, which are ultimately borne by our common stockholders. Payment of interest on such debt securities must take preference over any other dividends or other payments to our common stockholders. If we issue debt securities, it is likely that such securities will be governed by an indenture or other instrument containing covenants restricting our operating flexibility. In addition, such securities may be rated by rating agencies, and in obtaining a rating for such securities, we may be required to abide by operating and investment guidelines that could further restrict our operating flexibility. Furthermore, any amounts that we use to service our indebtedness would not be available for distributions to our common stockholders.

Our interests in Funding I are subordinated.

We own 100% of the equity interests in Funding I. We consolidate Funding I in our financial statements and treat the indebtedness of Funding I as our leverage. Our interests in Funding I (other than the management fees that the Investment Adviser has irrevocably directed to be paid to us) are subordinate in priority of payment to every other obligation of Funding I and are subject to certain payment restrictions set forth in the Credit Facility documents. We may receive cash distributions on our equity interests in Funding I only after it has made all (1) required cash interest and, if applicable, principal payments to the Lender, (2) required administrative expenses and (3) claims of other unsecured creditors of Funding I. We cannot assure you that there will be sufficient funds available to make any distributions to us or that such distributions will meet our expectations.

Our equity interests in Funding I are subordinate to all of the secured and unsecured creditors, known or unknown, of Funding I, including the Lender. Consequently, to the extent that the value of Funding I's portfolio of loan investments has been reduced as a result of conditions in the credit markets, defaulted loans, capital losses exceed gains on the underlying assets, prepayments or changes in interest rates, the return on our investment in Funding I could be reduced. Accordingly, our investment in Funding I is subject to loss of principal.

We may not receive cash on our equity interests from Funding I.

Except for management fees that PennantPark Investment Advisers has irrevocably directed to be paid to us, we receive cash from Funding I only to the extent that we receive distributions on our equity interests in Funding I. Funding I may make equity distributions on such interests only to the extent permitted by the payment

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

priority provisions of the Credit Facility. The Credit Facility generally provides that payments on such interests may not be made on any payment date unless all amounts owing to the Lender and other secured parties are paid in full. In the event that we fail to receive cash from Funding I, we could be unable to make distributions to our stockholders in amounts sufficient to qualify as a RIC. We also could be forced to sell investments in portfolio companies at less than their fair value in order to continue making such distributions.

Table of Contents

The ability to sell investments held by Funding I is limited.

The Credit Facility documents place restrictions on the collateral manager's ability to sell investments. As a result, there may be times or circumstances during which the collateral manager is unable to sell investments or take other actions that might be in our best interests.

If we issue preferred stock, debt securities or convertible debt securities the net asset value and market value of our common stock may become more volatile.

We cannot assure you that the issuance of preferred stock and/or debt securities would result in a higher yield or return to the holders of our common stock. The issuance of preferred stock and/or debt securities would likely cause the net asset value and market value of our common stock to become more volatile. If the dividend rate on the preferred stock, or the interest rate on the debt securities, were to approach the net rate of return on our investment portfolio, the benefit of leverage to the holders of our common stock would be reduced. If the dividend rate on the preferred stock, or the interest rate on the debt securities, were to exceed the net rate of return on our portfolio, the use of leverage would result in a lower rate of return to the holders of common stock than if we had not issued the preferred stock or debt securities. Any decline in the net asset value of our investment would be borne entirely by the holders of our common stock. Therefore, if the market value of our portfolio were to decline, the leverage would result in a greater decrease in net asset value to the holders of our common stock than if we were not leveraged through the issuance of preferred stock. This decline in net asset value would also tend to cause a greater decline in the market price for our common stock.

There is also a risk that, in the event of a sharp decline in the value of our net assets, we would be in danger of failing to maintain required asset coverage ratios which may be required by the 1940 Act and the terms of our preferred stock and/or debt securities or of a downgrade in the ratings of the preferred stock and/or debt securities or our current investment income might not be sufficient to meet the dividend requirements on the preferred stock or the interest payments on the debt securities. In order to counteract such an event, we might need to liquidate investments in order to fund redemption of some or all of the preferred stock and/or debt securities. In addition, we would pay (and the holders of our common stock would bear) all costs and expenses relating to the issuance and ongoing maintenance of the preferred stock and/or debt securities. Holders of preferred stock and/or debt securities may have different interests than holders of common stock and may at times have disproportionate influence over our affairs.

Holders of any preferred stock that we may issue will have the right to elect members of the board of directors and have class voting rights on certain matters.

The 1940 Act requires that holders of shares of preferred stock must be entitled as a class to elect two directors at all times and to elect a majority of the directors if dividends on such preferred stock are in arrears by two years or more, until such arrearage is eliminated. In addition, certain matters under the 1940 Act require the separate vote of the holders of any issued and outstanding preferred stock, including changes in fundamental investment restrictions and conversion to open-end status and, accordingly, preferred stockholders could veto any such changes. Restrictions imposed on the declarations and payment of dividends or other distributions to the holders of our common stock and preferred stock, both by the 1940 Act and by requirements imposed by rating agencies, might impair our ability to maintain our qualification as a RIC for U.S. federal income tax purposes, which could have a material adverse effect on our business, financial condition and results of operations.

We may in the future issue securities for which there is no public market and for which we expect no public market to develop.

In order to raise additional capital, we may issue debt or other securities for which no public market exists, and for which no public market is expected to develop. If we issue shares of our common stock as a component of a unit security, we would expect the common stock to separate from the other securities in such unit after a period of time or upon occurrence of an event and to trade publicly on the NASDAQ, which may cause volatility in our publicly traded common stock. To the extent we issue securities for which no public market exists and for which no public market develops, a purchaser of such securities may not be able to liquidate the investment without considerable delay, if at all. If a market should develop for our debt and other securities, the price may be highly volatile, and our debt and other securities may lose value.

There are significant potential conflicts of interest which could impact our investment returns.

The professionals of the Investment Adviser and Administrator serve as officers, directors or principals of entities that operate in the same or a related line of business as we do or of investment funds managed by affiliates of PennantPark Floating Rate Capital Ltd. that may be formed in the future. The Investment Adviser and Administrator may be engaged by such funds at any time and without the prior approval of our stockholders or our board of directors. Our board of directors monitors any potential conflict that may arise upon such a development. Accordingly, if new affiliated funds are formed, our board of directors, adviser and administrator may have obligations to investors in those entities, the fulfillment of which might not be in the best interests of us or our stockholders. Currently, the executive officers and directors, as well as the current senior investment professionals of the Investment Adviser, serve as officers and directors of PennantPark Investment Corporation, a publicly-traded BDC. Although the Investment Adviser endeavors to allocate investment opportunities in a fair and equitable manner, it is possible that, in the future, we may not be given the opportunity to participate in investments made by investment funds managed by the Investment Adviser or an investment manager affiliated with the Investment Adviser. In any such case, when the Investment Adviser identifies an investment, it is forced to choose which investment fund should make the investment. We may co-invest on a concurrent basis with PennantPark Investment Corporation, and any other affiliates that the Investment Adviser currently has or forms in the future, subject to compliance with applicable regulations and regulatory guidance and our allocation procedures. In certain circumstances, negotiated co-investments may be made only if we receive an order from the SEC permitting us to do so. There can be no assurance that any such order will be obtained.

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

In the ordinary course of our investing activities, we will pay investment advisory and incentive fees to the Investment Adviser, and will reimburse the Investment Adviser for certain expenses it incurs. As a result, investors in our common stock will invest on a gross basis and receive distributions on a net basis after expenses, resulting in a lower rate of return than an investor might achieve through direct investments. Accordingly, there may be times when the management team of the Investment Adviser has interests that differ from those of our stockholders, giving rise to a conflict.

In connection with our initial public offering, the Investment Adviser has paid to the underwriters 2% of the sales load, or \$2.1 million in the aggregate, with respect to the offering of shares of our common stock. We (and indirectly our stockholders) must reimburse this amount under certain circumstances. As a result of these arrangements, there may be times when the management team of the Investment Adviser has interests that differ from those of our stockholders, giving rise to a conflict. Furthermore, to ensure repayment, there is a risk the Investment Adviser will make more speculative investments.

Table of Contents

We have entered into a License Agreement with PennantPark Investment Advisers, pursuant to which the Investment Adviser has agreed to grant us a royalty-free non-exclusive license to use the name PennantPark. The License Agreement will expire (i) upon expiration or termination of the Investment Management Agreement, (ii) if the Investment Adviser ceases to serve as our investment adviser, (iii) by either party upon sixty days written notice or (iv) by the Investment Adviser at any time in the event we assign or attempt to assign or sublicense the License Agreement or any of our rights or duties thereunder without the prior written consent of the Investment Adviser. Other than with respect to this limited license, we have no legal right to the PennantPark name. In addition, we pay PennantPark Investment Administration, an affiliate of the Investment Adviser, our allocable portion of overhead and other expenses incurred by PennantPark Investment Administration in performing its obligations under the Administration Agreement, including rent and our allocable portion of the cost of our chief financial officer and chief compliance officer and their respective staffs. These arrangements may create conflicts of interest that our board of directors must monitor.

If we are required to repay in cash the amount paid to the underwriters of our initial public offering by the Investment Adviser, we may have to sell assets at a loss, and the amount that we have available for investment may be reduced, in order to pay the amount due.

In connection with our initial public offering, the Investment Adviser has paid to the underwriters 2% of the sales load, or \$2.1 million in the aggregate, with respect to the offering of shares of our common stock. We (and indirectly our stockholders) will be obligated to repay this amount (a) if during any four consecutive calendar quarter-periods ending on or after April 13, 2012, our Pre-Incentive Fee Net Investment Income equals or exceeds 1.75% (7.0% annualized) of our net assets at the beginning of such period (as adjusted for any issuances or repurchases of shares of our common stock) or (b) upon our liquidation. If one or more of these events does not occur on or before April 7, 2014, we will not be obligated to repay this amount. We will repay such amount to the Investment Adviser in cash, and the Investment Adviser has agreed to use such payment to purchase shares of our common stock in the secondary market.

If we are obligated to repay this amount to the Investment Adviser in cash while making distributions to our stockholders necessary to maintain our RIC status and/or avoid the imposition of federal income and excise taxes, we may have to dispose of a portion of our investments. Any such disposition could result in our realizing losses and reduce the amount that we have available for investment. Furthermore, to ensure repayment, there is a risk the Investment Adviser will make more speculative investments.

The trading market or market value of any publicly issued debt securities may be volatile.

If we publicly issue debt securities, they may or may not have an established trading market. We cannot assure investors that a trading market for our publicly issued debt securities would develop or be maintained if developed. In addition to our creditworthiness, many factors may materially adversely affect the trading market for, and market value of, our publicly issued debt securities. These factors include the following:

the time remaining to the maturity of these debt securities;

the outstanding principal amount of debt securities with terms identical to these debt securities;

the supply of debt securities trading in the secondary market, if any;

the redemption or repayment features, if any, of these debt securities;

the level, direction and volatility of market interest rates generally; and

market rates of interest higher or lower than rates borne by the debt securities.

There also may be a limited number of buyers for our debt securities. This too may materially adversely affect the market value of the debt securities or the trading market for the debt securities.

Our credit ratings may not reflect all risks of an investment in debt securities.

Our credit ratings, if any, are an assessment of our ability to pay our obligations. Consequently, real or anticipated changes in our credit ratings will generally affect the market value of any publicly issued debt securities. Our credit ratings, however, may not reflect the potential impact of risks related to market conditions generally or other factors discussed above on the market value of, or trading market for, any publicly issued debt securities.

Table of Contents

Terms relating to redemption may materially adversely affect the return on any debt securities.

If we issue debt securities that are redeemable at our option, we may choose to redeem the debt securities at times when prevailing interest rates are lower than the interest rate paid on the debt securities. In addition, if the debt securities are subject to mandatory redemption, we may be required to redeem the debt securities at times when prevailing interest rates are lower than the interest rate paid on the debt securities. In this circumstance, a holder of our debt securities may not be able to reinvest the redemption proceeds in a comparable security at an effective interest rate as high as the debt securities being redeemed.

If we issue subscription rights or warrants for our common stock, your interest in us may be diluted as a result of such rights or warrants offering.

Stockholders who do not fully exercise rights or warrants issued to them in an offering of subscription rights or warrants to purchase our common stock should expect that they will, at the completion of an offering, own a smaller proportional interest in us than would otherwise be the case if they fully exercised their rights or warrants. We cannot state precisely the amount of any such dilution in share ownership because we do not know what proportion of the common stock would be purchased as a result of any such offering.

In addition, if the subscription price or warrant exercise price is less than our net asset value per share of common stock at the time of an offering, then our stockholders would experience an immediate dilution of the aggregate net asset value of their shares as a result of the offering. The amount of any such decrease in net asset value is not predictable because it is not known at this time what the subscription price, warrant exercise price or net asset value per share will be on the expiration date of such rights offering or what proportion of our common stock will be purchased as a result of any such offering.

We may experience fluctuations in our quarterly results.

We could experience fluctuations in our quarterly operating results due to a number of factors, including the interest rate payable on the Floating Rate Loans we acquire, the default rate on such securities, the level of our expenses, variations in, and the timing of the recognition of, realized and unrealized gains or losses, the degree to which we encounter competition in our markets and general economic conditions. However, as a result of our irrevocable election to apply the fair value option to our Credit Facility future decreases of fair value of our debt will have a corresponding increase to our net asset value. Further increases of fair value of our debt will have the opposite effect. This will tend to mitigate volatility in our earnings and net asset value. As a result of these factors, results for any period should not be relied upon as being indicative of performance in future periods.

Changes in laws or regulations governing our operations may adversely affect our business.

We and our portfolio companies are subject to regulation by laws at the local, state and federal levels. These laws and regulations, as well as their interpretation, may be changed from time to time. Accordingly, any change in these laws or regulations could have a material adverse effect on our business. See Regulation for more information.

Our board of directors may change our investment objectives, operating policies and strategies without prior notice or stockholder approval.

Our board of directors have the authority to modify or waive certain of our operating policies and strategies without prior notice and without stockholder approval (except as required by the 1940 Act). However, absent stockholder approval, we may not change the nature of our business so as to cease to be, or withdraw our election as, a BDC. We cannot predict the effect any changes to our current operating policies and strategies would have on our business, operating results and value of our stock. Nevertheless, the effects may adversely affect our business and impact our ability to make distributions.

RISKS RELATING TO THE ILLIQUID NATURE OF OUR PORTFOLIO ASSETS

We invest in illiquid assets, and our valuation procedures with respect to such assets may result in recording values that are materially different than the values we ultimately receive upon disposition of such assets.

We expect most of our investments may be recorded using broker/dealers quotes or at fair value as determined in good faith by our board of directors. We expect that primarily most, if not all, of our investments (other than cash and cash equivalents) and the fair value of the Credit Facility will be classified as Level 3 under Financial Accounting Standards Board, or FASB, Accounting Standards Codification, or ASC, 820, Fair Value Measurement. This means that the portfolio valuations will be based on unobservable inputs and our own assumptions about how market participants would price the asset or liability. We expect that inputs into the determination of fair value of our portfolio investments and Credit Facility borrowings will require significant management judgment or estimation. Even if observable market data is available, such information may be the result of consensus pricing information or broker quotes, which include a disclaimer that the broker would not be held to such a price in an actual transaction. The non-binding nature of consensus pricing and/or quotes accompanied by such a disclaimer materially reduces the reliability of such information.

Determining fair value requires that judgment be applied to the specific facts and circumstances of each portfolio investment while employing a consistently applied valuation process for the types of investments we make. In determining fair value in good faith, we generally obtain financial and other information from portfolio companies, which may represent unaudited, projected or pro forma financial information. Unlike banks, we are not permitted to provide a general reserve for anticipated loan losses, we are instead required by the 1940 Act to specifically fair value each individual investment on a quarterly basis. We record unrealized appreciation if we believe that the underlying portfolio company has appreciated in value. Likewise, we record unrealized depreciation if we believe that the underlying portfolio company has depreciated in value. As a result, there will be uncertainty as to the value of our portfolio investments.

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

We adjust the valuation of our portfolio quarterly to reflect our board of directors' determination of the fair value of each investment in our portfolio. Any changes in fair value are recorded on our Consolidated Statement of Operations as net change in unrealized appreciation or depreciation.

Table of Contents

If we invest a greater percentage of our total assets in private investments, more of our portfolio assets will be recorded at fair value as determined in good faith by our board of directors. Our board of directors uses the services of one or more nationally recognized independent valuation firms to aid it in determining the fair value of these securities. The factors that may be considered in fair value pricing of our investments include the nature and realizable value of any collateral, the portfolio company's ability to make payments and its earnings and cash flows, the markets in which the portfolio company does business, comparison to publicly traded companies and other relevant factors. Because valuations may fluctuate over short periods of time and may be based on estimates, our determinations of fair value may differ materially from the value received in an actual transaction. Additionally, valuations of private securities and private companies are inherently uncertain. Our net asset value could be adversely affected if our determinations regarding the fair value of our investments were materially higher than the values that we ultimately realize upon the disposal of such securities.

The lack of liquidity in our investments may adversely affect our business.

We may acquire our investments directly from the issuer in privately negotiated transactions. Substantially all of these securities are subject to legal and other restrictions on resale or are otherwise less liquid than publicly traded securities. We typically exit our investments when the portfolio company has a liquidity event such as a sale, refinancing, or initial public offering of the company, but we are not required to do so.

The illiquidity of our investments may make it difficult or impossible for us to sell such investments if the need arises, particularly at times when the market appetite for illiquid securities is substantially diminished. In addition, if we are required to liquidate all or a portion of our portfolio quickly, we may realize significantly less than the value at which we have previously recorded our investments, which could have a material adverse effect on our business, financial condition and results of operations. In addition, we may face other restrictions on our ability to liquidate an investment in a portfolio company to the extent that we have material non-public information regarding such portfolio company.

Securities purchased by us that are liquid at the time of purchase may subsequently become illiquid due to events relating to the issuer of the securities, market events, economic conditions or investor perceptions. Domestic and foreign markets are complex and interrelated, so that events in one sector of the world markets or economy, or in one geographical region, can reverberate and have materially negative consequences for other market, economic or regional sectors in a manner that may not be foreseen and which may materially harm our business.

A general disruption in the credit markets could materially damage our business.

We are susceptible to the risk of significant loss if we are forced to discount the value of our investments in order to provide liquidity to meet our liability maturities. Funding I's borrowings under its Credit Facility are collateralized by the assets in our investment portfolio. A general disruption in the credit markets could result in a diminished appetite for our securities. In addition, with respect to over-the-counter traded securities, the continued viability of any over-the-counter secondary market depends on the continued willingness of dealers and other participants to purchase the securities.

If the fair value of our assets declines substantially, we may fail to maintain the asset coverage ratios stipulated by the 1940 Act, which could, in turn, cause us to lose our status as a BDC and materially impair our business operations. Our liquidity could be impaired further by an inability to access the capital markets or to draw down Funding I's Credit Facility. These situations may arise due to circumstances that we may be unable to control, such as a general disruption in the credit markets, a severe decline in the value of the U.S. dollar, a sharp economic downturn or an operational problem that affects third parties or us, and could materially damage our business.

We rely in part on our over-the-counter securities to provide us with adequate liquidity, but even these securities did face liquidity constraints under recent market conditions.

The market for other over-the-counter traded securities has weakened in the recent past as the viability of any over-the-counter secondary market depends on the continued willingness of dealers and other participants to purchase the securities.

RISKS RELATED TO OUR INVESTMENTS

Our investments in prospective portfolio companies may be risky, and you could lose all or part of your investment.

We intend to invest primarily in Floating Rate Loans issued by U.S. middle-market companies.

Floating Rate Loans. The Floating Rate Loans we invest in are usually rated below investment grade or may also be unrated. Investments in Floating Rate Loans rated below investment grade are considered speculative because of the credit risk of their issuers. Such companies are more likely than investment grade issuers to default on their payments of interest and principal owed to us, and such defaults could reduce our net asset value and income distributions. An economic downturn would generally lead to a higher non-payment rate by portfolio companies, and a Floating Rate Loan may lose significant market value before a default occurs and we may experience losses due to the inherent illiquidity of the investments. Moreover, any specific collateral used to secure a Floating Rate Loan may decline in value or become illiquid, which would adversely affect the Floating Rate Loan's value. Floating Rate Loans are subject to a number of risks, including liquidity risk and the risk of investing in below investment-grade, variable-rate securities.

Table of Contents

Floating Rate Loans are subject to the risk of non-payment of scheduled interest or principal. Such non-payment would result in a reduction of income to us, a reduction in the value of the investment and a potential decrease in our net asset value. There can be no assurance that the liquidation of any collateral securing a Floating Rate Loan would satisfy the borrower's obligation in the event of non-payment of scheduled interest or principal payments, or that the collateral could be readily liquidated. In the event of bankruptcy or insolvency of a borrower, we could experience delays or limitations with respect to our ability to realize the benefits of the collateral securing a Floating Rate Loan. The collateral securing a Floating Rate Loan may lose all or substantially all of its value in the event of the bankruptcy or insolvency of a borrower. Some loans are subject to the risk that a court, pursuant to fraudulent conveyance or other similar laws, could subordinate the rights in collateral of such loans to presently existing or future indebtedness of the borrower or take other action detrimental to the holders of loans including, in certain circumstances, invalidating such loans or causing interest previously paid to be refunded to the borrower. Either such step could materially negatively affect our performance.

We may acquire Floating Rate Loans through assignments or participations of interests in such loans. The purchaser of an assignment typically succeeds to all the rights and obligations of the assigning institution and becomes a lender under the credit agreement with respect to such debt obligation. However, the purchaser's rights can be more restricted than those of the assigning institution, and we may not be able to unilaterally enforce all rights and remedies under an assigned debt obligation and with regard to any associated collateral. A participation typically results in a contractual relationship only with the institution participating out the interest and not directly with the borrower. Sellers of participations typically include banks, broker-dealers, other financial institutions and lending institutions. In purchasing participations, we generally will have no right to enforce compliance by the borrower with the terms of the loan agreement against the borrower, and we may not directly benefit from the collateral supporting the debt obligation in which we have purchased the participation. As a result, we will be exposed to the credit risk of both the borrower and the institution selling the participation. Further, in purchasing participations in lending syndicates, we will not be able to conduct the same level of due diligence on a borrower or the quality of the Floating Rate Loan with respect to which we are buying a participation as we would conduct if we were investing directly in the Floating Rate Loan. This difference may result in us being exposed to greater credit or fraud risk with respect to such Floating Rate Loans than we expected when initially purchasing the participation.

In addition, investing in middle-market companies involves a number of significant risks including:

companies may have limited financial resources and may be unable to meet their obligations under their debt securities that we hold, which may be accompanied by a deterioration in the value of any collateral and a reduction in the likelihood of us realizing any guarantees we may have obtained in connection with our investment;

they typically have shorter operating histories, narrower product lines and smaller market shares than larger businesses, which tend to render them more vulnerable to competitors' actions and changing market conditions, as well as general economic downturns;

they are more likely to depend on the management talents and efforts of a small group of persons; therefore, the death, disability, resignation or termination of one or more of these persons could have a material adverse impact on our portfolio company and, in turn, on us;

they generally have less predictable operating results, may from time to time be parties to litigation, may be engaged in rapidly changing businesses with products subject to a substantial risk of obsolescence, and may require substantial additional capital to support their operations, finance expansion or maintain their competitive position. In addition, our executive officers, directors and our Investment Adviser may, in the ordinary course of business, be named as defendants in litigation arising from our investments in the portfolio companies; and

they may have difficulty accessing the capital markets to meet future capital needs, which may limit their ability to grow or to repay their outstanding indebtedness upon maturity.

We may invest up to 30% of our assets in investments that are not qualifying assets for business development companies under the 1940 Act. If we do not invest a sufficient portion of our assets in qualifying assets, we could be precluded from investing in assets that we deem to be attractive.

As a BDC, we may not acquire any asset other than qualifying assets, as defined under the 1940 Act, unless at the time the acquisition is made such qualifying assets represent at least 70% of the value of our total assets. Qualifying assets include investments in U.S. operating companies whose securities are not listed on a national securities exchange and companies listed on a national securities exchange subject to a market capitalization limit of \$250 million. Qualifying assets also include cash, cash equivalents, government securities and high quality debt securities maturing in one year or less from the time of investment.

We believe that most of our Floating Rate Loan investments will constitute qualifying assets. However, we may be precluded from investing in what we believe are attractive investments if such investments are not qualifying assets for purposes of the 1940 Act. If we do not invest a sufficient portion of our assets in qualifying assets, we will be prohibited from making any additional investment that is not a qualifying asset and could be forced to forgo attractive investment opportunities. Similarly, these rules could prevent us from making follow-on investments in existing portfolio companies (which could result in the dilution of our position) or could require us to dispose of investments at inappropriate times in order to comply with the 1940 Act. If we need to dispose of such investments

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

quickly, it would be difficult to dispose of such investments on favorable terms. For example, we may have difficulty in finding a buyer and, even if we do find a buyer, we may have to sell the investments at a substantial loss.

Table of Contents

We are a non-diversified investment company within the meaning of the 1940 Act, and therefore we generally are not limited with respect to the proportion of our assets that may be invested in securities of a single issuer.

We are classified as a non-diversified investment company within the meaning of the 1940 Act, which means that we are not limited by the 1940 Act with respect to the proportion of our assets that we may invest in securities of a single issuer, excluding limitations on investments, in other investment companies. To the extent that we assume large positions in the securities of a small number of issuers, our net asset value may fluctuate to a greater extent than that of a diversified investment company as a result of changes in the financial condition or the market's assessment of the issuer. We may also be more susceptible to any single economic or regulatory occurrence than a diversified investment company. Beyond our income tax diversification requirements, we do not have fixed guidelines for diversification, and our investments could be concentrated in relatively few portfolio companies.

Economic recessions or downturns could impair our portfolio companies and harm our operating results.

Many of our portfolio companies are susceptible to economic slowdowns or recessions and may be unable to repay our loans during these periods. Therefore, our non-performing assets are likely to increase, and the value of our portfolio is likely to decrease during these periods. Adverse economic conditions also may decrease the value of collateral securing some of our loans and the value of our equity investments. Economic slowdowns or recessions could lead to financial losses in our portfolio and a material decrease in revenues, net income and assets. Unfavorable economic conditions also could increase our funding costs, limit our access to the capital markets or result in a decision by lenders not to extend credit to us. These events could prevent us from increasing investments and materially harm our operating results.

A portfolio company's failure to satisfy financial or operating covenants imposed by us or other lenders could lead to defaults and potential termination of its loans and foreclosure on its secured assets, which could trigger cross-defaults under other agreements and jeopardize our portfolio company's ability to meet its obligations under the debt securities that we hold. We may incur expenses to the extent necessary to seek recovery upon default or to negotiate new terms with a defaulting portfolio company. Depending on the facts and circumstances of our investments and the extent of our involvement in the management of a portfolio company, upon the bankruptcy of a portfolio company, a bankruptcy court may recharacterize our debt investments as equity investments and subordinate all or a portion of our claim to that of other creditors. This could occur regardless of how we may have structured our investment.

If we fail to make follow-on investments in our portfolio companies, this could materially impair the value of our portfolio.

Following an initial investment in a portfolio company, we may make additional investments in that portfolio company as follow-on investments, in order to:

increase or maintain in whole or in part our equity ownership percentage;

exercise warrants, options or convertible securities that were acquired in the original or subsequent financing; or

attempt to preserve or enhance the value of our investment.

We have the discretion to make any follow-on investments, subject to the availability of capital resources. We may elect not to make follow-on investments or otherwise lack sufficient funds to make those investments. Any failure to make follow-on investments may, in some circumstances, jeopardize the continued viability of a portfolio company and our initial investment, or may result in a missed opportunity for us to increase our participation in a successful operation. Even if we have sufficient capital to make a desired follow-on investment, we may elect not to make a follow-on investment because we may not want to increase our concentration of risk, because we prefer other opportunities, or because we are inhibited by compliance with BDC requirements or the desire to maintain our tax status.

Because we do not generally hold controlling equity interests in our portfolio companies, we are not in a position to exercise control over our portfolio companies or to prevent decisions by management of our portfolio companies that could decrease the value of our investments.

Because we do not generally have controlling equity positions in our portfolio companies, we are subject to the risk that a portfolio company may make business decisions with which we disagree, and the stockholders and management of a portfolio company may take risks or otherwise act in ways that are adverse to our interests. Due to the lack of liquidity for the debt and equity investments that we typically hold in our portfolio companies, we may not be able to dispose of our investments in the event we disagree with the actions of a portfolio company, and may therefore suffer a decrease in the value of our investments.

An investment strategy focused primarily on privately held companies, including controlling equity interests, presents certain challenges, including the lack of available or comparable information about these companies, a dependence on the talents and efforts of only a few key portfolio company personnel and a greater vulnerability to economic downturns.

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

We have invested and intend to continue to invest primarily in privately held companies. Generally, little public information exists about these companies, and we rely on the ability of our Investment Adviser's investment professionals to obtain adequate information to evaluate the potential returns from investing in these companies. If they are unable to uncover all material information about these companies, we may not make a fully informed investment decision, and we may lose value on our investments. Also, privately held companies frequently have less diverse product lines and smaller market presence than larger competitors. These factors could have a material adverse impact on our investment returns as compared to companies investing primarily in the securities of public companies.

The effect of global climate change may impact the operations of our portfolio companies.

There may be evidence of global climate change. Climate change creates physical and financial risk and some of our portfolio companies may be adversely affected by climate change. For example, the needs of customers of energy companies vary with weather conditions, primarily temperature and humidity. To the extent weather conditions are affected by climate change, energy use could increase or decrease depending on the duration and magnitude of any changes. Increases in the cost of energy could adversely affect the cost of operations of our portfolio companies if the use of energy products or services is material to their business. A decrease in energy use due to weather changes may affect some of our portfolio companies' financial condition, through decreased revenues. Extreme weather conditions in general require more system backup, adding to costs, and can contribute to increased system stresses, including service interruptions.

Table of Contents

Our portfolio companies may incur debt that ranks equally with, or senior to, our investments in such companies.

We invest primarily in Floating Rate Loans issued by our portfolio companies. The portfolio companies usually may have, or may be permitted to incur, other debt that ranks equally with, or senior to, our investments. By their terms, such debt instruments may provide that the holders are entitled to receive payment of interest or principal on or before the dates on which we are entitled to receive payments in respect of the debt securities in which we invest. Also, in the event of insolvency, liquidation, dissolution, reorganization or bankruptcy of a portfolio company, holders of debt instruments ranking senior to our investment in that portfolio company would typically be entitled to receive payment in full before we receive any distribution in respect of our investment. After repaying such senior creditors, the portfolio company may not have any remaining assets to use for repaying its obligation to us. In the case of debt ranking equally with debt securities in which we invest, we would have to share on an equal basis any distributions with other creditors holding such debt in the event of an insolvency, liquidation, dissolution, reorganization or bankruptcy of the relevant portfolio company.

Our incentive fee may induce the Investment Adviser to make speculative investments.

The incentive fee payable by us to PennantPark Investment Advisers may create an incentive for PennantPark Investment Advisers to make investments on our behalf that are risky or more speculative than would be the case in the absence of such compensation arrangement. The incentive fee payable to our Investment Adviser is calculated based on a percentage of our return on invested capital. This may encourage our Investment Adviser to use leverage to increase the return on our investments. Under certain circumstances, the use of leverage may increase the likelihood of default, which would disfavor the holders of our common stock. In addition, our Investment Adviser will receive the incentive fee based, in part, upon net capital gains realized on our investments. Unlike that portion of the incentive fee based on income, there is no hurdle applicable to the portion of the incentive fee based on net capital gains. As a result, the Investment Adviser may have a tendency to invest more capital in investments that are likely to result in capital gains as compared to income producing securities. Such a practice could result in our investing in more speculative securities than would otherwise be the case, which could result in higher investment losses, particularly during economic downturns.

The part of our incentive fee payable by us to PennantPark Investment Advisers that relates to our investment income is computed and paid on income that may include interest that has been accrued but that has not been received in cash. PennantPark Investment Advisers is not obligated to reimburse us for any such incentive fees even if we subsequently incur losses or never receive in cash the deferred income that was previously accrued. As a result, there is a risk that we will pay incentive fees with respect to income that we never receive in cash.

We may make investments that cause our shareholders to bear investment advisory fees and other expenses on such investments in addition to our management fees and expenses.

We may invest, to the extent permitted by law, in the securities and instruments of other investment companies and companies that would be investment companies but are excluded from the definition of investment company provided in Section 3(c) of the 1940 Act. To the extent we so invest, we will bear our ratable share of any such investment company's expenses, including management and performance fees. We will also remain obligated to pay investment advisory fees, consisting of a base management fee and incentive fees, to PennantPark Investment Advisers with respect to investments in the securities and instruments of other investment companies under our Investment Management Agreement. With respect to any such investments, each of our stockholders will bear his or her share of the investment advisory fees of PennantPark Investment Advisers as well as indirectly bearing the investment advisory fees and other expenses of any investment companies in which we invest.

We may be obligated to pay our Investment Adviser incentive compensation even if we incur a loss.

Our Investment Adviser is entitled to incentive compensation for each fiscal quarter in an amount equal to a percentage of the excess of our investment income for that quarter (before deducting incentive compensation, net operating losses and certain other items) above a threshold return for that quarter. Our Pre-Incentive Fee Net Investment Income for incentive compensation purposes excludes realized and unrealized capital losses that we may incur in the fiscal quarter, even if such capital losses result in a net loss on our Consolidated Statement of Operations for that quarter. Thus, we may be required to pay the Investment Adviser incentive compensation for a fiscal quarter even if there is a decline in the value of our portfolio or we incur a net loss for that quarter.

Our investments in foreign securities may involve significant risks in addition to the risks inherent in U.S. investments.

Our investment strategy contemplates potential investments in securities of companies located outside of the United States. Investments in securities located outside the United States would not be qualifying assets under Section 55(a) of the 1940 Act. Investing in companies located outside of the United States may expose us to additional risks not typically associated with investing in U.S. companies. These risks include changes in exchange control regulations, political and social instability, expropriation, imposition of foreign taxes, less liquid markets and less available information than is generally the case in the United States, higher transaction costs, less government supervision of exchanges, brokers and issuers, less developed bankruptcy laws, difficulty in enforcing contractual obligations, lack of uniform accounting and auditing standards and greater price volatility.

Although most of our investments will be U.S. dollar-denominated, any investments denominated in a foreign currency will be subject to the risk that the value of a particular currency will change in relation to one or more other currencies. Among the factors that may affect currency values are trade balances, the level of short-term interest rates, differences in relative values of similar assets in different currencies, long-term opportunities for investment and capital appreciation, and political developments. We may employ hedging techniques to minimize these risks, but we can offer no assurance that we will, in fact, hedge currency risk or, that if we do, such strategies will be effective.

Table of Contents

We may expose ourselves to risks if we engage in hedging transactions.

If we engage in hedging transactions, we may expose ourselves to risks associated with such transactions. We may borrow under a Credit Facility in currencies selected to minimize our foreign currency exposure or use instruments such as forward contracts, currency options and interest rate swaps, caps, collars and floors to seek to hedge against fluctuations in the relative values of our portfolio positions from changes in currency exchange rates and market interest rates. Hedging against a decline in the values of our portfolio positions does not eliminate the possibility of fluctuations in the values of such positions or prevent losses if the values of such positions decline. However, such hedging can establish other positions designed to gain from those same developments, thereby offsetting the decline in the value of such portfolio positions. Such hedging transactions may also limit the opportunity for gain if the values of the underlying portfolio positions should increase. Moreover, it may not be possible to hedge against an exchange rate or interest rate fluctuation that is so generally anticipated that we are not able to enter into a hedging transaction at an acceptable price.

While we may enter into such transactions to seek to reduce currency exchange rate and interest rate risks, unanticipated changes in currency exchange rates or interest rates may result in poorer overall investment performance than if we had not engaged in any such hedging transactions. In addition, the degree of correlation between price movements of the instruments used in a hedging strategy and price movements in the portfolio positions being hedged may vary. Moreover, for a variety of reasons, we may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Any such imperfect correlation may prevent us from achieving the intended hedge and expose us to risk of loss. In addition, it may not be possible to hedge fully or perfectly against currency fluctuations affecting the value of securities denominated in non-U.S. currencies because the value of those securities is likely to fluctuate as a result of factors not related to currency fluctuations.

RISKS RELATING TO AN INVESTMENT IN OUR COMMON STOCK

There is a risk that our stockholders may not receive distributions or that our distributions may not grow over time.

We intend to make distributions on a monthly basis to our stockholders out of assets legally available for distribution. We cannot assure you that we will achieve investment results that will allow us to make a specified level of cash distributions or year-to-year increases in cash distributions. In addition, due to the asset coverage test applicable to us as a BDC, we may be limited in our ability to make distributions. Further, if more stockholders opt to receive cash dividends and other distributions rather than participate in our dividend reinvestment plan, we may be forced to liquidate some of our investments and raise cash in order to make distribution payments, which could materially harm our business. Finally, to the extent we make distributions to stockholders which include a return of capital, that portion of the distribution essentially constitutes a return of the stockholders' investment. Although such return of capital may not be taxable, such distributions may increase an investor's tax liability for capital gains upon the future sale of our common stock.

Investing in our shares may involve an above average degree of risk.

The investments we make in accordance with our investment objectives may result in a higher amount of risk and volatility than alternative investment options or loss of principal. Our investments in portfolio companies may be highly speculative and aggressive and therefore, an investment in our shares may not be suitable for someone with lower risk tolerance.

We may allocate the net proceeds from any offering of our securities in ways with which you may not agree.

We have significant flexibility in investing the net proceeds of an offering and may use the net proceeds from an offering in ways with which you may not agree or for purposes other than those contemplated at the time of the offering.

Our shares may trade at discounts from net asset value or at premiums that are unsustainable over the long term.

Shares of BDC's may trade at a market price that is less than the net asset value that is attributable to those shares. Our shares may trade above and below our net asset value, or NAV. Our shares traded on the NASDAQ Global Select Market at \$10.55 and \$11.75 as of September 30, 2011 and March 31, 2012, respectively. Our NAV was \$13.44 and \$14.12 as of September 30, 2011 and March 31, 2012, respectively. The possibility that our shares of common stock will trade at a discount from NAV or at a premium that is unsustainable over the long term is separate and distinct from the risk that our NAV will decrease. It is not possible to predict whether our shares will trade at, above or below NAV in the future.

Table of Contents

The market price of our common stock may fluctuate significantly.

The market price and liquidity of the market for shares of our common stock may be significantly affected by numerous factors, some of which are beyond our control and may not be directly related to our operating performance. These factors include:

significant volatility in the market price and trading volume of securities of BDCs or other companies in our sector, which are not necessarily related to the operating performance of these companies;

changes in regulatory policies or tax guidelines, particularly with respect to RICs or BDCs;

any loss of RIC status;

changes in earnings or variations in operating results;

changes in the value of our portfolio of investments;

any shortfall in revenue or net income or any increase in losses from levels expected by investors or securities analysts;

the inability of our Investment Adviser to employ additional experienced investment professionals or the departure of any of the Investment Adviser's key personnel;

operating performance of companies comparable to us;

general economic trends and other external factors;

conversion features of subscription rights, warrants or convertible debt; and

loss of a major funding source.

Since our initial listing on the NASDAQ Global Select Market, our shares of common stock have traded at a wide range of prices. We can offer no assurance that our shares of common stock will not display similar volatility in future periods.

We may be unable to invest the net proceeds raised from offerings on acceptable terms, which would harm our financial condition and operating results.

Until we identify new investment opportunities, we intend to either invest the net proceeds of future offerings in cash equivalents, U.S. government securities and other high-quality debt investments that mature in one year or less or use the net proceeds from such offerings to reduce then-outstanding obligations under our Credit Facility. We cannot assure you that we will be able to find enough appropriate investments that meet our investment criteria or that any investment we complete using the proceeds from an offering will produce a sufficient return.

Sales of substantial amounts of our securities may have an adverse effect on the market price of our securities.

Sales of substantial amounts of our securities, or the availability of such securities for sale, could adversely affect the prevailing market prices for our securities. If this occurs and continues it could impair our ability to raise additional capital through the sale of securities should we desire to do so.

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

You may have current tax liabilities on distributions you reinvest in our common stock.

Under the dividend reinvestment plan, if you own shares of our common stock registered in your own name, you will have all cash distributions automatically reinvested in additional shares of our common stock unless you opt out of the dividend reinvestment plan by delivering a written notice to the plan administrator prior to the record date of the next dividend or distribution. If you have not opted out of the dividend reinvestment plan, you will be deemed to have received, and for federal income tax purposes will be taxed on, the amount reinvested in our common stock to the extent the amount reinvested was not a tax-free return of capital. As a result, you may have to use funds from other sources to pay your federal income tax liability on the value of the common stock received. See Dividend Reinvestment Plan for more information.

There is a risk that our common stockholders may receive our stock as dividends in which case they may be required to pay taxes in excess of the cash they receive.

We may distribute our common stock as a dividend of our taxable income and a shareholder could receive a portion of the dividends declared and distributed by us in shares of our common stock with the remaining amount in cash. A shareholder will be considered to have recognized dividend income equal to the fair market value of the stock paid by us plus cash received with respect to such dividend. We have not elected to distribute stock as a dividend but reserve the right to do so.

We may obtain the approval of our stockholders to issue shares of our common stock at prices below the then current net asset value per share of our common stock. If we receive such approval from stockholders, in the future, we may issue shares of our common stock at a price below the then current net asset value per share of common stock. Any such issuance could materially dilute your interest in our common stock and reduce our net asset value per share.

We intend to seek to obtain from our stockholders and they may approve a proposal that authorizes us to sell shares of our common stock below the then current net asset value per share of our common stock in one or more offerings for a 12-month period. Such approval will allow us to access the capital markets in a way that we were previously unable to as a result of restrictions that, absent stockholder approval, apply to BDCs under the 1940 Act.

Any sale or other issuance of shares of our common stock at a price below net asset value per share will result in an immediate dilution to your interest in our common stock and a reduction of our net asset value per share. This dilution would occur as a result of a proportionately greater decrease in a stockholder's interest in our earnings and assets and voting interest in us than the increase in our assets resulting from such issuance. Because the number of future shares of common stock that may be issued below our net asset value per share and the price and timing of such issuances are not currently known, we cannot predict the actual dilutive effect of any such issuance. We also cannot determine the resulting reduction in our net asset value per share of any such issuance at this time. We caution you that such effects may be material, and we undertake to describe all the material risks and dilutive effects of any offerings we make at a price below our then current net asset value in the future in a prospectus supplement issued in connection with any such offering.

Table of Contents

We incur significant costs as a result of being a publicly traded company.

As a publicly traded company, we incur legal, accounting and other expenses, including costs associated with the periodic reporting requirements applicable to a company whose securities are registered under the Securities Exchange Act of 1934, as amended, or the Exchange Act, as well as additional corporate governance requirements, including requirements under the Sarbanes-Oxley Act of 2002, and other rules implemented by the SEC and the listing standards of the NASDAQ.

Provisions of the Maryland General Corporation Law and of our charter and bylaws could deter takeover attempts and have an adverse impact on the price of our common stock.

The Maryland General Corporation Law, our charter and our bylaws contain provisions that may discourage, delay or make more difficult a change in control of us or the removal of our directors. We are subject to the Maryland Business Combination Act, the application of which is subject to any applicable requirements of the 1940 Act. Our board of directors has adopted a resolution exempting from the Business Combination Act any business combination between us and any other person, subject to prior approval of such business combination by our board, including approval by a majority of our disinterested directors. If the resolution exempting business combinations is repealed or our board does not approve a business combination, the Business Combination Act may discourage third parties from trying to acquire control of us and increase the difficulty of consummating such an offer.

In addition, our bylaws exempt from the Maryland Control Share Acquisition Act acquisitions of our common stock by any person. If we amend our bylaws to repeal the exemption from such act, it may make it more difficult for a third party to obtain control of us and increase the difficulty of consummating such an offer. Our bylaws require us to consult with the SEC staff before we repeal such exemption. Also, our charter provides for classifying our board of directors in three classes serving staggered three-year terms, and provisions of our charter authorizes our board of directors to classify or reclassify shares of our stock in one or more classes or series, to cause the issuance of additional shares of our stock, and to amend our charter, without stockholder approval, to increase or decrease the number of shares of stock that we have authority to issue.

These anti-takeover provisions may inhibit a change of control in circumstances that could give our stockholders the opportunity to realize a premium over the market price for our common stock.

FORWARD-LOOKING STATEMENTS

This prospectus contains statements that constitute forward-looking statements, which relate to us and our consolidated subsidiary regarding future events or our future performance or financial condition. These forward-looking statements are not historical facts, but rather are based on current expectations, estimates and projections about our industry, our beliefs and our assumptions. The forward-looking statements contained in this prospectus involve risks and uncertainties, including statements as to:

our future operating results;

our business prospects and the prospects of our prospective portfolio companies;

the dependence of our future success on the general economy and its impact on the industries in which we invest;

the impact of a protracted decline in the liquidity of credit markets on our business;

the impact of investments that we expect to make;

the impact of fluctuations in interest rates on our business;

our contractual arrangements and relationships with third parties;

the valuation of our investments in portfolio companies, particularly those having no liquid trading market;

the ability of our prospective portfolio companies to achieve their objectives;

our expected financings and investments;

the adequacy of our cash resources and working capital;

the timing of cash flows, if any, from the operations of our prospective portfolio companies; and

the ability of our Investment Adviser to locate suitable investments for us and to monitor and administer our investments.

We use words such as anticipates, believes, expects, intends, seeks, plans, estimates and similar expressions to identify forward-looking statements. You should not place undue reliance on the forward looking statements as our actual results could differ materially from those projected in the forward-looking statements for any reason, including the factors set forth in our prospectus entitled "Risk Factors" and elsewhere.

Although we believe that the assumptions on which these forward-looking statements are based are reasonable, any of those assumptions could prove to be inaccurate, and as a result, the forward-looking statements based on those assumptions also could be inaccurate. Important assumptions include our ability to originate new loans and investments, certain margins and levels of profitability and the availability of additional capital. In light of these and other uncertainties, the inclusion of a projection or forward-looking statement in this prospectus should not be regarded as a representation by us that our plans and objectives will be achieved.

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

We have based the forward-looking statements included in this prospectus on information available to us on the date of this prospectus, and we assume no obligation to update any such forward-looking statements. Although we undertake no obligation to revise or update any forward-looking statements in this prospectus, whether as a result of new information, future events or otherwise, you are advised to consult any additional disclosures that we may make directly to you or through supplemental prospectus that we in the future may file with SEC including annual and quarterly reports on Form 10-K/Q and current reports on Form 8-K.

You should understand that, under Sections 27A(b)(2)(B) of the Securities Act of 1933, as amended, or the Securities Act, and Section 21E(b)(2)(B) of the Exchange Act the safe harbor provisions of the Private Securities Litigation Reform Act of 1995 do not apply to statements made in connection with any offering of securities pursuant to this prospectus or in periodic reports we file under the Exchange Act.

Table of Contents

USE OF PROCEEDS

We may use the net proceeds from selling securities pursuant to this prospectus to reduce our then-outstanding obligations under our Credit Facility, to invest in new or existing portfolio companies, to form and capitalize a subsidiary or for other general corporate purposes. Any supplements to this prospectus relating to an offering may more fully identify the use of the proceeds from such offering.

As of March 31, 2012, we had \$47.8 million in borrowings outstanding under our \$100.0 million Credit Facility. Borrowings under our Credit Facility bear interest at a commercial paper rate that approximates LIBOR plus 225 basis points per annum for the first three years, or the revolving period, and the rate resets to LIBOR plus 425 basis points for the remaining two years. At March 31, 2012, the interest rate at that time was 2.54%. The Credit Facility is a revolving facility with a stated maturity date of June 23, 2016 and is secured by all of the assets held by Funding I. Amounts repaid under our Credit Facility remain available for future borrowings during the revolving period. See Management's Discussion and Analysis of Financial Condition and Results of Operations Liquidity and Capital Resources for more information.

We may invest the proceeds from an offering of securities in new or existing portfolio companies, and such investments may take up to a year from the closing of such offering, in part because privately negotiated investments in illiquid securities or private middle-market companies require substantial due diligence and structuring. During this period, we may use the net proceeds from our offering to reduce then-outstanding obligations under our Credit Facility, which may dilute our net asset value per share, or to invest such proceeds in cash equivalents, U.S. government securities and other high-quality debt investments that mature in one year or less. We expect to earn yields on such investments, if any, that are lower than the interest income that we anticipate receiving in respect of investments in our assets. As a result, any distributions we make during this investment period may be lower than the distributions that we would expect to pay when such proceeds are fully invested in non-temporary investments. The management fee payable by us will not be reduced while our assets are invested in any such temporary investments. See Regulation Temporary Investments for more information.

Table of Contents**SELECTED FINANCIAL DATA**

We have derived the financial information below from our audited and unaudited financial data and, in the opinion of management, such information reflects all adjustments (consisting of normal recurring adjustments) that are necessary to present fairly the results of such periods. The Consolidated Statement of Operations data, Per share data and Consolidated Statement of Assets and Liabilities data for the six months ended March 31, 2012 are derived from our unaudited Consolidated Financial Statements. The selected financial data for the period from March 4, 2011 (commencement of operations) through September 30, 2011 are derived from our Consolidated Financial Statements which have been audited by KPMG LLP, our independent registered public accounting firm. This selected financial data should be read in conjunction with our Consolidated Financial Statements and related notes thereto and Management's Discussion and Analysis of Financial Condition and Results of Operations.

(Dollar amounts in thousands, except per share data)	Six Months ended March 31, 2012	For the period from March 4, 2011 (commencement of operations) through September 30, 2011
Consolidated Statement of Operations data:		
Total investment income	\$ 5,411	\$ 2,947
Total expenses before debt issuance costs	2,491	1,260 ⁽¹⁾
Net investment income	2,920	320

**MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS**

The information contained in this section should be read in conjunction with the selected financial data and our consolidated financial statements and notes thereto appearing elsewhere in this prospectus.

Overview

PennantPark Floating Rate Capital Ltd. is a BDC whose objectives are to generate current income and capital appreciation by investing primarily in Floating Rate Loans and other investments made to U.S. middle-market private companies.

We believe that Floating Rate Loans to private middle-market companies offer attractive risk adjusted returns due to a limited amount of capital available for such companies and the potential for rising interest rates. We use the term "middle-market" to refer to companies with annual revenues between \$50 million and \$1 billion. We may also invest in public middle-market U.S. companies that are thinly traded or have a small market-capitalization. Our investments are typically rated below investment grade. Securities rated below investment grade are often referred to as leverage loans or high yield securities or junk bonds and are often higher risk compared to debt instruments that are rated above investment grade and have speculative characteristics. However, when compared to junk bonds and other non-investment grade debt, Floating Rate Loans typically have more robust capital-preserving qualities, such as reduced credit risk, and have historically had lower default rates than junk bonds. Floating Rate Loans are typically the most senior source of capital in a borrower's capital structure and often have certain of the borrower's assets pledged as collateral. Our investments may have terms of three to ten years and are made to U.S. and, to a limited extent, non-U.S. corporations, partnerships and other business entities which operate in various industries and geographical regions.

Under normal market conditions, we generally expect that at least 80% of the value of our managed assets will be invested in Floating Rate Loans and other instruments bearing a variable rate of interest which may, from time to time, include variable rate derivative instruments. We generally expect that senior secured loans will represent at least 65% of our overall portfolio. We also generally expect to invest up to 35% of our overall portfolio opportunistically in other types of investments, including second-lien, high yield, mezzanine and distressed debt securities and equity investments. Our investment size may range between \$1 million and \$10 million, on average, although we expect that this investment size will vary proportionately with the size of our capital base.

Our investment activity depends on many factors, including the amount of debt and equity capital available to middle-market companies, the level of merger and acquisition activity for such companies, the general economic environment and the competitive environment for the types of investments we make. The turmoil in the credit markets in recent years has adversely affected each of these factors and has resulted in a broad-based reduction in the demand for middle-market debt instruments. These conditions may present us with attractive investment opportunities, as we believe that there are many middle-market companies that need senior secured and mezzanine debt financing. We have used, and expect to continue to use, our Credit Facility, proceeds from the rotation of our portfolio and proceeds from public and private offerings of securities to finance our investment objectives.

Organization and Structure of PennantPark Floating Rate Capital Ltd.

PennantPark Floating Rate Capital Ltd., a Maryland corporation organized in October 2010, is a closed-end, externally managed, non-diversified investment company that has elected to be treated as a BDC under the 1940 Act. As such, we are required to comply with certain regulatory requirements. For instance, we generally have to invest at least 70% of our total assets in "qualifying assets", including securities of U.S. private companies or thinly traded public companies, public companies with a market capitalization of less than \$250 million, cash, cash equivalents, U.S. government securities and high quality debt investments that mature in one year or less. In addition, for tax purposes we have elected to be treated, and intend to qualify annually, as a RIC under the Code.

Our investment activities are managed by PennantPark Investment Advisers. Under our Investment Management Agreement, we have agreed to pay our Investment Adviser an annual base management fee based on our average adjusted gross total assets as well as an incentive fee based on our investment performance. We have also entered into an Administration Agreement with PennantPark Investment Administration. Under our Administration Agreement, we have agreed to reimburse the Administrator for our allocable portion of overhead and other expenses incurred by the Administrator in performing its obligations under our Administration Agreement, including rent and our allocable portion of the costs of compensation and related expenses of our chief compliance officer, chief financial officer and their respective staffs. Our board of directors, a majority of whom are independent of us and the Investment Adviser supervise our activities.

Revenues

We generate revenue in the form of interest income on the debt securities we hold and capital gains and distributions, if any, on investment securities that we may acquire in portfolio companies. Our debt investments, whether in the form of senior secured loans or mezzanine debt, typically have a term of three to ten years and bear interest at a fixed or floating rate. Interest on debt securities is generally payable quarterly or semiannually. In some cases, some of our investments provide for deferred interest payments or PIK interest. The principal amount of the debt securities and any accrued but unpaid interest generally becomes due at the maturity date. In addition, we may generate revenue in the form of commitment, origination, structuring or diligence fees, fees for providing managerial assistance and possibly consulting fees. Loan origination fees, original issue discount and market discount or premium are capitalized, and we accrete or amortize such amounts as income. We record prepayment premiums on loans and debt securities as income. Dividend income, if any, is recognized on an accrual basis on the ex-dividend date to the extent that we expect to collect such amounts.

Table of Contents

Expenses

Our primary operating expenses include the payment of management fees to our Investment Adviser, our allocable portion of overhead under our Administration Agreement and other operating costs as detailed below. Our management fee compensates our Investment Adviser for its work in identifying, evaluating, negotiating, consummating and monitoring our investments. Additionally, we pay interest expense on the outstanding debt we accrue under our Credit Facility. We bear all other direct or indirect costs and expenses of our operations and transactions, including:

the cost of calculating our net asset value, including the cost of any third-party valuation services;

the cost of effecting sales and repurchases of shares of our common stock and other securities;

fees payable to third parties relating to, or associated with, making investments, including fees and expenses associated with performing due diligence and reviews of prospective investments or complementary businesses;

expenses incurred by the Investment Adviser in performing due diligence and reviews of investments;

transfer agent and custodial fees;

fees and expenses associated with marketing efforts;

federal and state registration fees and any stock exchange listing fees;

federal, state and local taxes;

independent directors' fees and expenses;

brokerage commissions;

fidelity bond, directors and officers/errors and omissions liability insurance and other insurance premiums;

direct costs such as printing, mailing, long distance telephone and staff;

fees and expenses associated with independent audits and outside legal costs;

costs associated with our reporting and compliance obligations under the 1940 Act and applicable federal and state securities laws; and

all other expenses incurred by either the Administrator or us in connection with administering our business, including payments under our Administration Agreement that will be based upon our allocable portion of overhead, and other expenses incurred by the Administrator in performing its obligations under

Edgar Filing: PennantPark Floating Rate Capital Ltd. - Form N-2/A

our Administration Agreement, including rent and our allocable portion of the costs of compensation and related expenses of our chief compliance officer, chief financial officer and their respective staffs.

During periods of asset growth, we expect our general and administrative expenses to be relatively stable or decline as a percentage of total assets and increase during periods of asset declines. Incentive fees, interest expense and costs relating to future offerings of securities would be additive.

Table of Contents

The SEC requires that estimated Total Annual Expenses be calculated as a percentage of net assets in the table on page 5 of this prospectus rather than as a percentage of total assets. Total assets include assets that have been funded with borrowed money (leverage). For reference, the table below illustrates our estimated Total Annual Expenses as a percentage of average total assets:

Estimated Annual Expenses (as a Percentage of Average Total Assets)

Base management fees	1.00 %	(1)
Incentive fees payable under the Investment Management Agreement	0.22 %	(2)
Interest payments on borrowed funds	1.01 %	(3)
Other expenses	1.50 %	(4)
Total annual expenses	3.73 %	(5)

- (1) The contractual management fee is calculated at an annual rate of 1.00% of our average adjusted gross assets. See Certain Relationships and Transactions Investment Management Agreement for more information.
- (2) The portion of incentive fees paid with respect to net investment income is based on actual amounts incurred and payable under our Investment Management Agreement during the three months ended March 31, 2012, annualized for a full year. Such incentive fees are based on performance, vary from year to year and are not paid unless our performance exceeds specified thresholds. Incentive fees in respect of net investment income do not include incentive fees in respect of net capital gains. The portion of our incentive fee paid in respect of net capital gains is determined and payable in arrears as of the end of each calendar year (or upon termination of the Investment Management Agreement, as of the termination date) and equals 20.0% of our realized capital gains, if any, on a cumulative basis from inception through the end of each calendar year, computed net of all realized capital losses and unrealized capital depreciation on a cumulative basis, less the aggregate amount of any previously paid capital gains incentive fees. As of March 31, 2012, our unrealized capital gains exceeded our cumulative realized and unrealized capital losses and we accrued a capital gains incentive fee of \$0.1 million in accordance with GAAP. However, Incentive fees payable under the Investment Management Agreement includes an accrual for capital gains incentive fee for the three months ended March 31, 2012 even though no capital gains incentive fee was payable under our Investment Management Agreement as of March 31, 2012, and we cannot assure you that we will recognize capital gains for the calendar year ending December 31, 2012 in amounts consistent with the accrual for the same period. For more detailed information about the incentive fee, please see Certain Relationships and Transactions Investment Management Agreement for more information.
- (3) As of March 31, 2012, we had \$47.8 million in borrowings outstanding under our \$100.0 million Credit Facility. We may use proceeds of an offering of securities under this registration statement to repay outstanding obligations under our Credit Facility. After completing any such offering, we may continue to borrow under our Credit Facility to finance our investment objectives. We have estimated the annual interest expense on borrowed funds and caution you that our actual interest expense will depend on prevailing interest rates and our rate of borrowing, which may be substantially higher than the estimate provided in this table. See Risk Factors Risks Relating To Our Business and Structure We currently use borrowed funds to make investments and are exposed to the typical risks associated with leverage for more information.
- (4) Other expenses includes our general and administrative expenses, professional fees, directors fees, insurance costs, expenses of our dividend reinvestment plan and the expenses of the Investment Adviser reimbursable under our Investment Management Agreement and of the Administrator reimbursable under our Administration Agreement. Such expenses are based on actual other expenses for the three months ended March 31, 2012. See the Consolidated Statement of Operations in our Consolidated Financial Statements.
- (5) The table above is intended to assist you in understanding the various costs and expenses that an investor in shares of our common stock will bear as a percentage of our average gross assets as of March 31, 2012. However, we caution you that these percentages are estimates and may vary with changes in the market value of our investments, the amount of equity capital raised and used to invest in portfolio companies and changes in the level of expenses as a percentage of our gross assets. We may borrow money to leverage our net assets and increase our total assets and such leverage will affect both the total annual expenses and gross assets used in deriving the ratios in the above table. Thus, any differences in the estimated expenses and the corresponding level of average asset balances will affect the estimated percentages and those differences could be material.

Critical Accounting Policies

The discussion of our financial condition and results of operation is based upon our Consolidated Financial Statements, which have been prepared in accordance with GAAP. The preparation of these Consolidated Financial Statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses during the reporting period. Actual results could differ from these estimates. We have eliminated all intercompany balances and transactions. References to the ASC serve as a single source of literature. Subsequent events are evaluated and disclosed as appropriate for events occurring through the date the Consolidated Financial Statements are issued. Changes in the economic environment, financial markets and any other parameters used in determining such estimates could cause actual results to differ. In addition to the discussion below, we describe our critical accounting policies in the notes to our Consolidated Financial Statements.

Valuation of Portfolio Investments

Our investments generally consist of illiquid securities including debt and equity investments. Our board of directors generally uses market quotations to assess the value of our investments for which market quotations are readily available. We obtain these market values from independent pricing services or at the bid prices obtained from at least two broker/dealers if available, otherwise by a principal market maker or a primary market dealer. If our board of directors has a bona fide reason to believe any such market quote does not reflect the fair value of an investment, it may independently value such investments by using the valuation procedure that it uses with respect to assets for which market quotations are not readily available. Investments, of sufficient credit quality, purchased within 60 days of maturity are valued at cost plus accreted discount, or minus amortized premium, which approximates fair value.

We expect that there may not be readily available market values for many of our investments which are or will be in our portfolio and we value such investments at fair value as determined in good faith by or under the direction of our board of directors using a documented valuation policy, described in this prospectus, and a consistently applied valuation process. With respect to investments for which there is no readily available market value, the factors that the board of directors may take into account in pricing our investments at fair value include, as relevant, the nature and realizable value of any collateral, the portfolio company's ability to make payments and its earnings and discounted cash flow, the markets in which the portfolio company does business, comparison to publicly traded securities and other relevant factors. When an external event such as a purchase transaction, public offering or subsequent equity sale occurs, we consider the pricing indicated by the external event to corroborate or revise our valuation. Due to the inherent uncertainty of determining the fair value of investments that do not have a readily available market value, the price used in an actual transaction may differ from our valuation and the differences could be material.

With respect to investments for which market quotations are not readily available, or for which market quotations are deemed not reflective of the fair value, our board of directors undertakes a multi-step valuation process each quarter, as described below:

- (1) Our quarterly valuation process begins with each portfolio company or investment being initially valued by the senior investment professionals of our Investment Adviser responsible for the portfolio investment;
- (2) Preliminary valuation conclusions are then documented and discussed with the management of our Investment Adviser;
- (3) Our board of directors also engages independent valuation firms to conduct independent appraisals of our investments for which market quotations are not readily available or are readily available but deemed not reflective of the fair value of the investment. The independent valuation firms review management's preliminary valuations in light of its own independent assessment and also in light of any market quotations obtained from an independent pricing service, broker, dealer or market maker;
- (4) The audit committee of our board of directors reviews the preliminary valuations of our Investment Adviser and that of the independent valuation firms and responds and supplements the valuation recommendations of the independent valuation firms to reflect any comments; and
- (5) Our board of directors discusses the valuations and determines the fair value of each investment in our portfolio in good faith, based on the input of our Investment Adviser, the respective independent valuation firms and the audit committee.

Table of Contents

Fair value, as defined under ASC 820, is the price that we would receive upon selling an investment or pay to transfer a liability in an orderly transaction to a market participant in the principal or most advantageous market for the investment or liability. ASC 820 emphasizes that valuation techniques maximize the use of observable market inputs and minimize the use of unobservable inputs. Inputs refer broadly to the assumptions that market participants would use in pricing an asset or liability, including assumptions about risk. Inputs may be observable or unobservable. Observable inputs reflect the assumptions market participants would use in pricing an asset or liability based on market data obtained from sources independent of us. Unobservable inputs reflect the assumptions market participants would use in pricing an asset or liability based on the best information available to us on the reporting period date.

ASC 820 classifies the inputs used to measure these fair values into the following hierarchies:

Level 1: Inputs that are quoted prices (unadjusted) in active markets for identical assets or liabilities, accessible by us at the measurement date.

Level 2: Inputs that are quoted prices for similar assets or liabilities in active markets, or that are quoted prices for identical or similar assets or liabilities in markets that are not active and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term, if applicable, of the financial instrument.

Level 3: Inputs that are unobservable for an asset or liability because they are based on our own assumptions about how market participants would price the asset or liability.

A financial instrument's categorization within the valuation hierarchy is based upon the lowest level of input that is significant to the fair value measurement. Generally, most of our investments and our Credit Facility are classified as Level 3. Due to the inherent uncertainty of determining the fair value of investments that do not have a readily available market value, the price used in an actual transaction may be different than our valuation and those differences may be material.

The inputs into the determination of fair value may require significant management judgment or estimation. Even if observable market data is available, such information may be the result of consensus pricing information or broker quotes which include a disclaimer that the broker would not be held to such a price in an actual transaction. The non-binding nature of consensus pricing and/or quotes accompanied by disclaimer would result in classification as Level 3 information, assuming no additional corroborating evidence was available. Corroborating evidence that would result in classifying these non-binding brokers/dealer bids as a Level 2 asset includes observable market-based transactions for the same or similar assets or other relevant observable market based inputs that may be used in pricing an asset.

Our investments are generally structured as Floating Rate Loans, mainly senior secured loans, but also may include second lien, high yield, mezzanine and distressed debt securities and equity investments. To the extent we invest in derivative instruments in the future, such instruments would be valued at fair value in accordance with our valuation policy. The transaction price, excluding transaction costs, is typically the best estimate of fair value at inception. When evidence supports a subsequent change to the carrying value from the original transaction price, adjustments are made to reflect the expected exit values. Ongoing reviews by our Investment Adviser and independent valuation firms are based on an assessment of each underlying investment, incorporating valuations that consider the evaluation of financing and sale transactions with third parties, expected cash flows and market-based information including comparable transactions, performance multiples and yields, among other factors. These non-public investments using unobservable inputs are included in Level 3 of the fair value hierarchy.

A review of fair value hierarchy classifications is conducted on a quarterly basis. Changes in our ability to observe valuation inputs may result in a reclassification for certain financial assets or liabilities. Reclassifications impacting Level 3 of the fair value hierarchy are reported as transfers in or out of the Level 3 category as of the end of the quarter in which the reclassifications occur. During the six months ended March 31, 2012, our ability to observe valuation inputs has resulted in no reclassification of assets from Level 3 to 2. There were no investments transferred between Levels 1 and 2 for the same period.

In addition to using the above inputs in cash equivalents, investments and our Credit Facility valuations, we employ the valuation policy approved by our board of directors that is consistent with ASC 820. Consistent with our valuation policy, we evaluate the source of inputs, including any markets in which our investments are trading, in determining fair value. See Note 2 to our Consolidated Financial Statements.

Table of Contents

In accordance with Accounting Standards Update 2011-04 and as outlined in the table below, our investments using a market approach valuation technique are valued using the average of the bids from brokers or dealers. The bids include a disclaimer, have no corroborating evidence and may be the result of consensus pricing. We do not adjust the bids.

The remainder of our portfolio was valued using a market comparable or enterprise valuation technique and our long-term Credit Facility used an income approach valuation technique. With respect to investments for which there is no readily available market value, the factors that the board of directors may take into account in pricing our investments at fair value include, as relevant, the nature and realizable value of any collateral, the portfolio company's ability to make payments, its earnings and discounted cash flow, the markets in which the portfolio company does business, comparison to publicly traded securities and other relevant factors. When an external event such as a purchase transaction, public offering or subsequent equity sale occurs, the pricing indicated by the external event is used to corroborate the valuation. When using earnings multiples to value a portfolio company, the multiple used requires the use of judgment and estimates in determining how a market participant would price such an asset. Generally, the sensitivity of unobservable inputs or combination of inputs such as industry comparable companies, market outlook, consistency, discount rates and reliability of earnings and prospects for growth, or lack thereof, affects the multiple used in pricing an investment. As a result, any change in any one of those factors may have a significant impact on the valuation of an investment.

Asset Category	Fair Value	Valuation Techniques	Unobservable Inputs	Range of Values/ Input
First lien, second lien, subordinated debt/corporate notes and preferred and common equity	90%	Market approach	Broker/Dealer bids	1 - 9
First lien, second lien, subordinated debt/corporate notes and preferred and common equity	10%	Market comparable / Enterprise value	EBITDA multiples	7.6x - 10.7x
Long-Term Credit Facility	100%	Market comparable / Income approach	Discount rate	3.5%

The carrying value of our consolidated financial liabilities approximates fair value. We adopted ASC 825-10, which provides companies with an option to report selected financial assets and liabilities at fair value, and made an irrevocable election to apply ASC 825-10 to our long-term Credit Facility. We elected to use the fair value option for our Credit Facility to align the measurement attributes of both our assets and liabilities while mitigating volatility in earnings from using different measurement attributes. ASC 825-10 establishes pre
