RANDGOLD RESOURCES LIMITED

(Exact name of Registrant as specified in its charter)

Not Applicable

(Translation of Registrant's name into English)

JERSEY, CHANNEL ISLANDS

(Jurisdiction of incorporation or organization)

3rd Floor Unity Chambers, 28 Halkett Street, St. Helier, Jersey JE2 4WJ, Channel Islands

(Address of principal executive offices)

Securities registered or to be registered pursuant to Section 12(b) of the Act.

Title of each class

Name of each exchange on which registered

American Depositary Shares each represented by one Ordinary Share NASDAQ Global Select Market

Ordinary Shares, par value US \$0.05 per Share*

* Not for trading, but only in connection with the listing of American Depositary Shares on the NASDAQ Global Select Market pursuant to the requirements of the Securities and Exchange Commission.

Securities registered or to be registered pursuant to Section 12(g) of the Act.

None

(Title of Class)

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act.

None

(Title of Class)

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the Annual Report.

As of December 31, 2014, the Registrant had outstanding 92,724,116 ordinary shares, par value \$0.05 per share.

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

If the report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP International Financial Reporting Standards as issued by the International Accounting Standards Board Other

If "Other" has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow. " Item 17 " Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). " Yes x No

Table of Contents

GLOSSARY OF MINING TECHNICAL TERMS

The following explanations are not intended as technical definitions, but rather are intended to assist the reader in understanding some of the terms as used in this annual report (Annual Report).

Albite:	A mineral within the Feldspar Group which is the sodium rich end member of the Albite-Anorthite Series. It is a common type of hydrothermal alteration.
Alteration:	The chemical change in a rock due to hydrothermal and other fluids.
Archaean:	A geological eon before 2.5 Ga.
Arsenopyrite:	An iron arsenic sulfide mineral.
Assay:	A chemical test performed on a sample of ores or minerals to determine the amount of valuable metals contained.
Banded iron formation:	A bedded deposit of iron minerals.
Basalt:	An extrusive volcanic rock composed primarily of plagioclase, pyroxene and some olivine.
bcm:	A measure of volume representing a cubic meter of in-situ rock.
Birimian:	Geological time era, about 2.1 billion years ago.
Breccia:	A rock in which angular fragments are surrounded by a mass of fine-grained minerals.
Cage:	The conveyance used to transport men and equipment between the surface and the mine levels.
Carbonate:	A mineral salt typically found in quartz veins and as a product of hydrothermal alteration of sedimentary rock.
Cemented Aggregate Fill:	A backfill method for filling open stopes that uses cement and rock aggregate.
Clastic:	Rocks built up of fragments of pre-existing rocks which have been produced by the processes of weathering and erosion.
Concentrate:	A fine, powdery product of the milling process containing a high percentage of valuable metal.
Cut-off grade:	The lowest grade of material that can be mined and processed considering all applicable costs, without incurring a loss or gaining a profit.

- Cyanidation:** A method of extracting exposed gold or silver grains from crushed or ground ore by dissolving it in a weak cyanide solution. Carried out in tanks inside a mill or in heaps of ore outside.
- Decline:** A sloping underground opening for machine access from level to level or from surface, also called a ramp.
- Development:** Underground work carried out for the purpose of opening up a mineral deposit which includes shaft sinking, crosscutting, drifting and raising.
- Diamond Drilling (DDH):** A rotary type of rock drilling that cuts a core of rock that is recovered in long cylindrical sections, two cm or more in diameter.

Table of Contents

Dilution (mining):	Rock that is, by necessity, removed along with the ore in the mining process, subsequently lowering the grade of the ore.
Dip:	The angle at which a vein, structure or rock bed is inclined from the horizontal as measured at right angles to the strike.
Discordant:	Structurally unconformable.
EEP:	Exclusive EP.
EP:	Exploration permit.
Exploration:	Prospecting, sampling, mapping, diamond drilling and other work involved in searching for ore.
Fault:	A break in the Earth's crust caused by tectonic forces which have moved the rock on one side with respect to the other.
Feasibility Study:	A comprehensive study of a mineral deposit in which all geological, engineering, legal, operating, economic, social, environmental and other relevant factors are considered in sufficient detail that it could reasonably serve as the basis for a final decision by a financial institution to finance the development of the deposit for mineral production.
Felsic:	A light colored igneous rock composed of quartz, feldspar and muscovite. Also a term used to describe light-colored rocks containing feldspar, feldspathoids and silica.
Feldspar:	An alumino-silicate mineral.
Footwall:	The underlying side of a fault, orebody or stope.
g/t:	Grams of gold per metric tonne.
Gabbro:	A dark, coarse-grained igneous rock.
Geophysical survey:	A scientific method of prospecting that measures the physical properties of rock formations. Common properties investigated include magnetism, specific gravity, electrical conductivity and radioactivity.
Gneiss:	A coarse-grained, foliated rock produced by metamorphism.
Gold reserves:	The gold contained within proven and probable reserves on the basis of mining recoverable material (reported as tonnes and head grade we expect to be delivered to the mill).
Gold sales:	Represents the sales of gold at spot and the gains/losses on hedge contracts which have been delivered into at the designated maturity date. It excludes gains/losses which have been rolled forward to match future sales. This adjustment is considered appropriate because no cash is received/paid in respect of such contracts.
Grade:	The quantity of metal per unit mass of ore expressed as a percentage or, for gold, as grams of gold per tonne of ore.

Granite: A coarse-grained intrusive igneous rock consisting of quartz, feldspar and mica.

- 2 -

Table of Contents

Greenstone belt:	An area underlain by metamorphosed volcanic and sedimentary rocks, usually in a continental shield.
Greywacke:	A dark gray, coarse grained, indurated sedimentary rock consisting essentially of quartz, feldspar, and fragments of other rock types.
Hangingwall:	The rock on the upper side of a vein or ore deposit.
Head grade:	The grade of the ore as delivered to the metallurgical plant.
Hematite:	An oxide of iron, and one of that metal's most common ore minerals
Hydrothermal:	Relating to hot fluids circulating in the earth's crust.
Igneous rocks:	Rocks formed by the solidification of molten material from far below the earth's surface.
In situ:	In place or within unbroken rock or still in the ground.
Kibalian:	A geological time era between 2.4 billion to 2.8 billion years before the present.
Lode:	A portion of a mineral deposit in solid rock.
Logging:	The process of recording geological observations of drill core either on paper or on computer disk.
Lower proterozoic:	Era of geological time between 2.5 billion and 1.8 billion years before the present.
Magnetite:	Black, magnetic iron ore, an iron oxide.
Measures:	Conversion factors from metric units to US units are provided below:

Metric Unit		US Equivalent
1 tonne	= 1 t	1.10231 tons
1 gram	= 1 g	0.03215 ounces
1 gram per ton	= 1 g/t	0.02917 ounces per ton
1 kilogram per ton	= 1 kg/t	29.16642 ounces per ton
1 kilometer	= 1 km	0.621371 miles
1 meter	= 1 m	3.28084 feet
1 centimeter	= 1 cm	0.3937 inches
1 millimeter	= 1 mm	0.03937 inches
1 square kilometer	= 1 sq km	0.3861 square miles

Metamorphism: The process by which the form or structure of rocks is changed by heat and pressure.

Mill delivered tonnes:

A quantity, expressed in tonnes, of ore delivered to the metallurgical plant.

Milling/mill:

The comminution of the ore, although the term has come to cover the broad range of machinery inside the treatment plant where the gold is separated from the ore/a revolving drum used for the grinding of ores in preparation for treatment.

Mineable:

That portion of a mineralized deposit for which extraction is technically and economically feasible.

Table of Contents

Mineralization: The presence of a target mineral in a mass of host rock.

Mineralized material: A mineralized body which has been delineated by appropriately spaced drilling and/or underground sampling to support a sufficient tonnage and average grade of metals to warrant further exploration. A deposit of mineralized material does not qualify as a reserve until a comprehensive evaluation based upon unit cost, grade, recoveries, and other material factors conclude legal and economic feasibility.

Moz: Million troy ounces.

Mt: Million metric tonnes.

Nugget: A small mass of precious metal, found free in nature.

Open pit: A mine that is entirely on surface. Also referred to as open-cut or open-cast mine.

Ore: A mixture of ore minerals and gangue from which at least one of the metals can be extracted at a profit.

Orebody: A natural concentration of valuable material that can be extracted and sold at a profit.

Ounce: One troy ounce, which equals 31.10348 grams.

Outcrop: An exposure of rock or mineral deposit that can be seen on surface that is, not covered by soil or water.

Oxide Ore: Soft, weathered rock that is oxidized.

Paste Backfill: A backfill method for filling open stopes that uses cement and tailings material.

Plutonic: Refers to rocks of igneous origin that have come from great depth.

Porphyry: Any igneous rock in which relatively large crystals, called phenocrysts, are set in a fine-grained groundmass.

Prefeasibility Study: A comprehensive study of the viability of a mineral project that has advanced to a stage where the mining method, in the case of underground mining, or the pit configuration, in the case of an open pit, has been established, and which, if an effective method of mineral processing has been determined and includes a financial analysis based on reasonable assumptions of technical, engineering, operating, economic, social and environmental factors and the evaluation of other relevant factors which are sufficient for a qualified person, acting reasonably, to determine if all or part of the mineral material may be classified as a mineral reserve.

Probable reserves: Reserves for which quantity and grade and/or quality are computed from information similar to that used for proven reserves, but the sites for inspection, sampling, and measurement are farther apart or are otherwise less adequately spaced. The degree of assurance, although lower than that for proven reserves, is high enough to assume continuity between points of observation.

Prospect:

An area of land with insufficient data available on the mineralization to determine if it is economically recoverable, but warranting further investigation.

Proven reserves:

Reserves for which quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade and/or quality are computed from the results of detailed sampling; and the sites for inspection, sampling and measurement are spaced so closely and the geologic character is so well defined that size, shape, depth and mineral content of reserves are well-established.

Table of Contents

Pyrite:	A yellow iron sulphide mineral, normally of little value. It is sometimes referred to as “fool’s gold”.
Pyrrhotite:	A bronze-colored, magnetic iron sulphide mineral.
Quartz:	A mineral compound of silicon and oxygen.
Quartzite:	Metamorphic rock with interlocking quartz grains displaying a mosaic texture.
Reconnaissance:	A preliminary survey of ground.
Refining:	The final stage of metal production in which final impurities are removed from the molten metal by introducing air and fluxes. The impurities are removed as gases or slag.
Rehabilitation:	The process of restoring mined land to a condition approximating its original state.
Reserve:	That part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination.
RP:	Reconnaissance Permit.
Sampling:	Selecting a fractional but representative sample for analysis.
Satellite deposit:	A smaller subsidiary deposit proximal to a main deposit.
Sedimentary:	Pertaining to or containing sediment. Used in reference to rocks which are derived from weathering and are deposited by natural agents, such as air, water and ice.
Shaft:	A vertical or inclined excavation in rock for the purpose of providing access to an orebody. Usually equipped with a hoist at the top, which lowers and raises a conveyance for handling ore, workers or materials.
Shear zone:	A zone in which shearing has occurred on a large scale.
Silica:	Silicon dioxide. Quartz is a common example.
Slag:	The vitreous mass separated from the fused metals in the smelting process.
Stockpile:	Broken ore heaped on surface, pending treatment.
Stope:	An excavation in a mine from which ore is, or has been, extracted.
Strike length:	The direction and length of a geological plane.
Stripping:	The process of removing overburden to expose ore.
Sulfide:	A mineral characterized by the linkages of sulfur with a metal or semi-metal, such as pyrite or iron sulfide. Also a zone in which sulfide minerals occur.

Sump: An excavation where water accumulates before being pumped to surface.

Tailings: Material rejected from a mill after most of the recoverable valuable minerals have been extracted.

- 5 -

Table of Contents

Tonnage:	Quantities where the ton or tonne is an appropriate unit of measure. Typically used to measure reserves of gold-bearing material in situ or quantities of ore and waste material mined, transported or milled.
Tonne:	One tonne is equal to 1,000 kilograms (also known as a “metric” ton).
Total cash costs:	Total cash costs, as defined in the Gold Institute standard, include mine production, transport and refinery costs, general and administrative costs, movement in production inventories and ore stockpiles, transfers to and from deferred stripping where relevant and royalties.
Trend:	The direction, in the horizontal plane, of a linear geological feature, such as an ore zone, or a group of orebodies measured from true north.
Ultramafic:	An igneous rock with a very low silica content and rich in iron magnesium minerals.
Vein:	A fissure, fault or crack in a rock filled by minerals that have travelled upwards from some deep source.
Volcaniclastic:	Where volcanic derived material has been transported and reworked through mechanical processes.
Volcanisedimentary:	Where volcanic and sedimentary material have been transported and reworked through mechanical processes.
Waste:	Rock mined with an insufficient gold content to justify processing.
Weathered or weathering:	Rock broken down by surface elements of temperature and water.

Statements in this Annual Report concerning our business outlook or future economic performance; anticipated revenues, expenses or other financial items; and statements concerning assumptions made or expectations as to any future events, conditions, performance or other matters, are “forward-looking statements” as that term is defined under the United States federal securities laws. Forward-looking statements are subject to risks, uncertainties and other factors which could cause actual results to differ materially from those stated in such statements. Factors that could cause or contribute to such differences include, but are not limited to, those set forth under “PART I. Item 3. Key Information – D. Risk Factors” in this Annual Report as well as those discussed elsewhere in this Annual Report and in our other filings with the Securities and Exchange Commission.

We are incorporated under the laws of Jersey, Channel Islands with the majority of our operations located in West and Central Africa. Our books of account are maintained in US dollars and our annual and interim financial statements are prepared on a historical cost basis, except as otherwise required under International Financial Reporting Standards as issued by International Accounting Standards Board (IFRS), and in accordance with IFRS. IFRS differs in significant respects from generally accepted accounting principles in the United States, or US GAAP. This Annual Report includes our audited consolidated financial statements prepared in accordance with IFRS. The financial information included in this Annual Report has been prepared in accordance with IFRS and, except where otherwise indicated, is

presented in US dollars. For a definition of cash costs and other non-GAAP measures, please see “PART I. Item 3. Key Information – A. Selected Financial Data”.

Unless the context otherwise requires, “us”, “we”, “our”, “company”, “group” or words of similar import, refer to Randgold Resources Limited and its subsidiaries and affiliated companies.

Unless the context otherwise requires, “Morila” refers to Société des Mines de Morila SA, “Loulo” refers to Société des Mines de Loulo SA, “Goukoto” refers to Société des Mines de Goukoto SA, “Tongon” refers to Société des Mines de Tongon SA, “Kibali” refers to Kibali Goldmines SA and “Massawa” refers to the Massawa feasibility project.

A. SELECTED FINANCIAL DATA

The following selected historical consolidated financial data has been derived from, and should be read in conjunction with, the more detailed information and financial statements, including our audited consolidated financial statements for the years ended December 31, 2014, 2013 and 2012 and as at December 31, 2014 and December 31, 2013, which appear elsewhere in this Annual Report. The historical consolidated financial data as at December 31, 2012, 2011 and 2010, and for the years ended December 31, 2011 and 2010 have been derived from our audited consolidated financial statements not included in this Annual Report.

The financial data have been prepared in accordance with IFRS, unless otherwise noted.

Year Ended December 31, 2014	Year Ended December 31, 2013	Year Ended December 31, 2012	Year Ended December 31, 2011	Year Ended December 31, 2010

Total cash costs (\$ per ounce sold) ³	698	715	735	688	681

¹ Profit from operations is calculated as profit before income tax under IFRS, excluding net finance income/(costs) and share of profits of equity accounted joint ventures. Profit from operations all arises from continuing operations.

² Dividend distribution to the company's shareholders is recognized as a liability in the group's financial statements in the period in which the dividends are approved by the board of directors and declared to shareholders.

³ Refer to explanation of non-GAAP measures provided.

Following the introduction and adoption of IFRS 11 Joint arrangements in 2013, the group changed its accounting policy on joint ventures from January 1, 2013 with prior periods 2011 and 2012 restated accordingly (refer to the prior year Annual Report Form 20-F). IFRS 11 did not require restatement for earlier years, therefore the information extracted from the Statement of Comprehensive Income for 2010 and the Statement of Financial Position for that year were not restated.

Table of Contents

Non-GAAP Measures

We have identified certain measures that we believe will assist understanding of the performance of the business. As the measures are not defined under IFRS they may not be directly comparable with other companies' adjusted measures. The non-GAAP measures are not intended to be a substitute for, or superior to, any IFRS measures of performance but management has included them as these are considered to be important comparables and key measures used within the business for assessing performance.

These measures are further explained below:

Total cash costs and cash cost per ounce are non-GAAP measures. Total cash costs and total cash cost per ounce are calculated using guidance issued by the Gold Institute. The Gold Institute was a non-profit industry association comprising leading gold producers, refiners, bullion suppliers and manufacturers. This institute has now been incorporated into the National Mining Association. The guidance was first issued in 1996 and revised in November 1999. Total cash costs, as defined in the Gold Institute's guidance, include mine production, transport and refinery costs, general and administrative costs, movement in production inventories and ore stockpiles, transfers to and from deferred stripping where relevant and royalties. Total cash costs and cash cost per ounce also include our share of our equity accounted joint ventures' total cash costs and cash cost per ounce.

Total cash cost per ounce is calculated by dividing total cash costs, as determined using the Gold Institute guidance, by gold ounces sold for the periods presented. Total cash costs and total cash cost per ounce are calculated on a consistent basis for the periods presented. Total cash costs and total cash cost per ounce should not be considered by investors as an alternative to operating profit or net profit attributable to shareholders, as an alternative to other IFRS measures or an indicator of our performance. The data does not have a meaning prescribed by IFRS and therefore amounts presented may not be comparable to data presented by gold producers who do not follow the guidance provided by the Gold Institute. In particular depreciation and amortization would be included in a measure of total costs of producing gold under IFRS, but are not included in total cash costs under the guidance provided by the Gold Institute. Furthermore, while the Gold Institute has provided a definition for the calculation of total cash costs and total cash cost per ounce, the calculation of these numbers may vary from company to company and may not be comparable to other similarly titled measures of other companies. However, we believe that total cash cost per ounce is a useful indicator to investors and management of a mining company's performance as it provides an indication of a company's profitability and efficiency, the trends in cash costs as the company's operations mature, and a benchmark of performance to allow for comparison against other companies.

Table of Contents

Cash operating costs and cash operating cost per ounce are calculated by deducting royalties from total cash costs. Cash operating cost per ounce is calculated by dividing cash operating costs by gold ounces sold for the periods presented. Total cash operating costs and cash operating cost per ounce include our share of joint ventures' total operating cash cost and operating cash cost per ounce.

Gold sales is a non-GAAP measure. It represents the sales of gold at spot and the gains/losses on hedge contracts which have been delivered into at the designated maturity date. It excludes gains/losses on hedge contracts which have been rolled forward to match future sales. This adjustment is considered appropriate because no cash is received/paid in respect of these contracts. We currently do not have any hedge positions. Gold sales include our share of our equity accounted joint ventures' gold sales.

Profit from mining activity is calculated by subtracting total cash costs from gold sales for all periods presented. Profit from mining includes our share of our equity accounted joint ventures.

Gold on hand represents gold in doré at the mines multiplied by the prevailing spot gold price at the end of the period. Gold on hand includes our share of our equity accounted joint ventures' gold on hand.

The following table lists the costs of producing gold, based on IFRS figures extracted from the financial statements of the Company, and reconciles this measure to total cash costs as defined by the Gold Institute's guidance, as a non-GAAP measure, for each of the periods set forth below:

\$000:	Year Ended December 31, 2014	Year Ended December 31, 2013	Year Ended December 31, 2012	Year Ended December 31, 2011	Year Ended December 31, 2010

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Total cost of producing gold ²	1,024,701	807,911	715,065	576,784	309,756
Less: Non-cash costs included in total cost of producing gold: Depreciation and amortization under IFRS	(146,762)	(130,638)	(117,991)	(65,562)	(28,127)
Less: Non-cash costs included in total cost of producing gold: Depreciation and amortization for joint ventures	(86,183)	(19,322)	(13,750)	(16,498)	—
Total cash costs using the Gold Institute's guidance ²	791,756	657,951	583,324	494,724	281,629
Ounces sold ¹	1,134,941	920,248	793,852	718,762	413,262
Total cost of producing gold per ounce (\$ per ounce) ²	903	878	901	802	750
Total cash costs per ounce (\$ per ounce) ²	698	715	735	688	681

1. 40% share of Morila, 45% share of Kibali and 100% share of Loulo, Tongon and Goukoto

2. Refer to explanation of non-GAAP measures provided. Randgold consolidates 100% of Loulo, Goukoto and Tongon, 40% of Morila and 45% of Kibali in the consolidated non-GAAP measures.

3. Comparative figures excluded transport and refining costs from mine production costs and disclosed such costs separately. Given its immateriality, it has now been included in mine production costs. Transport and refining costs total \$3.0 million for 2014 (2013:\$2.7 million; 2012:\$2.7 million; 2011: \$2.4 million; 2010: \$1.7million) and are now included in mine production costs.

Table of Contents

B. CAPITALIZATION AND INDEBTEDNESS

Not applicable.

C. REASONS FOR THE OFFER AND USE OF PROCEEDS

Not applicable.

D. RISK FACTORS

In addition to the other information included in this Annual Report, you should carefully consider the following factors, which individually or in combination could have a material adverse effect on our business, financial condition and results of operations. There may be additional risks and uncertainties not presently known to us, or that we currently see as immaterial, which may also harm our business. If any of the risks or uncertainties described below or any such additional risks and uncertainties actually occur, our business, results of operations and financial condition could be materially and adversely affected. In this case, the trading price of our ordinary shares and American Depositary Shares, or ADS, could decline and you might lose all or part of your investment.

Risks Relating to Our Operations

The profitability of our operations, and the cash flows generated by our operations, are affected by changes in the market price for gold which in the past has fluctuated widely.

Substantially all of our revenue and cash flows have come from the sale of gold. Historically, the market price for gold has fluctuated widely and has been affected by numerous factors, over which we have no control, including:

• the demand for gold for investment purposes including Exchange Traded Funds, industrial uses and for use in jewelry;

- international or regional political and economic trends;

- the strength of the US dollar, the currency in which gold prices generally are quoted, and of other currencies;

- market expectations regarding inflation rates;

- interest rates;

- speculative activities;

actual or expected purchases and sales of gold bullion holdings by central banks, the International Monetary Fund, or other large gold bullion holders or dealers;

- hedging activities by gold producers; and

- the production and cost levels for gold in major gold-producing nations.

The volatility of gold prices is illustrated in the following table, which shows the approximate annual high, low and average of the afternoon London Bullion Market fixing price of gold in US dollars for the past ten years.

Year	Price Per Ounce (\$)		
	High	Low	Average
2005	537	411	444
2006	725	525	604
2007	841	608	695
2008	1,011	712	871
2009	1,213	810	972
2010	1,421	1,058	1,224
2011	1,895	1,319	1,571
2012	1,792	1,540	1,669
2013	1,694	1,192	1,411
2014	1,385	1,142	1,266
2015 (through February)	1,296	1,172	1,240

The market price of gold has been and continues to be significantly volatile. In 2014, there was a 17.5% reduction in the gold price. If gold prices should fall below and remain below our cost of production for any sustained period we may experience losses, and if gold prices should fall below our cash costs of production we may be forced to re-plan and mine higher grade ore which will have a negative impact on our reserves and life of mine plans. Low gold prices for an extended period could result in us having to curtail or suspend some or all of our mining operations. In addition, we would also have to assess the economic impact of low gold prices on our ability to recover from any losses we may incur during that period and on our ability to maintain adequate reserves. Our total cash cost of production per

ounce of gold sold was \$698 in the year ended December 31, 2014, \$715 in the year ended December 31, 2013 and \$735 in the year ended December 31, 2012.

- 10 -

Table of Contents

Our mining operations may yield less gold under actual production conditions than indicated by our gold reserve figures, which are estimates based on a number of assumptions, including assumptions as to mining and recovery factors, production costs and the price of gold.

The ore reserve estimates contained in this Annual Report are estimates of the mill delivered quantity and grade of gold in our deposits. They represent the amount of gold that we believe can be mined, processed and sold at prices sufficient to recover our estimated total cash costs of production, remaining investment and anticipated additional capital expenditure. Our ore reserves are estimated based upon many factors, including:

- the results of exploratory drilling and an ongoing sampling of the orebodies;
- past experience with mining properties;
- depletion from past mining;
- mining method and associated dilution and ore loss factors;
- gold price; and
- operating costs.

Because our ore reserve estimates are calculated based on current estimates of future production costs and gold prices, they should not be interpreted as assurances of the economic life of our gold deposits or the profitability of our future operations.

Reserve estimates may require revisions based on actual production experience. Further, a sustained decline in the market price of gold may render the recovery of ore reserves containing relatively lower grades of gold mineralization uneconomical and ultimately result in a restatement of reserves. The failure of the reserves to meet our recovery expectations may have a material adverse effect on our business, financial condition and results of operations.

We are subject to various political and economic uncertainties associated with operating in Mali that could significantly affect our mines in Mali and our results of operations and financial condition.

We are subject to risks associated with operating gold mines in Mali. In 2014, gold produced in Mali represented approximately 60% of our consolidated group gold production, including joint ventures. On March 21, 2012, Mali was subject to an attempted coup d'état that resulted in the suspension of the constitution, the partial closing of the borders and the general disruption of business activities in the country. The supply of consumables to our mines in Mali was temporarily interrupted as a result of the political situation. The borders were reopened shortly after these events and an interim government was installed within a month. In January 2013, following military conflicts with terrorist insurgents, the Malian State requested the assistance of the French Government to assist the Malian army to repel the insurgents who had been occupying parts of the north of the country and beginning to move towards the southern part of the country. During 2013, French and other foreign troops occupied the northern part of the country to assist the Malian State in maintaining control of this region and presidential and parliamentary elections took place during the middle of 2013. Although we have continued to produce and sell gold during the political crisis, there can be no assurance that the political situation will not disrupt our ability to continue gold production, or our ability to sell and ship our gold from our mines in Mali. Furthermore, there can be no assurance that the political situation in Mali will not have a material adverse effect on our operations and financial condition.

Our business and results of operations may be adversely affected if the State of Mali and the State of Democratic Republic of Congo (DRC) fail to repay Value Added Tax (TVA), owing to the Morila, Loulo, Gounkoto and Kibali mines.

Our mining companies operating in Mali are exonerated by their Establishment Conventions from paying TVA for the three years following first commercial production. After that, TVA is payable and reimbursable. During 2012, 2013 and 2014 Loulo and Morila has offset TVA reimbursements it was owed against corporate and other taxes payable to the State of Mali under the terms of its legally binding mining conventions. At December 31, 2013, TVA owed by the State of Mali to Loulo stood at \$115.6 million. This amount has decreased to \$91.3 million at December 31, 2014 inclusive of exchange rate variances of \$12.1 million. As of December 31, 2012, December 31, 2013 and December 31, 2014, TVA owed by the State of Mali to Morila amounted to \$6.4 million (our 40%), \$4.4 million (our 40%) and \$10.5 million (our 40%) respectively. By December 31, 2013 and December 31, 2014, TVA refunds of \$10.1 million and \$14.5 million respectively remained owing to Gounkoto by the State of Mali.

By December 31, 2012, December 31, 2013 and December 31, 2014, TVA owing to Kibali by the DRC State amounted to \$18.5 million (our 45%), \$35.3 million (our 45%) and \$50.5 million (our 45%), respectively. Kibali has received TVA refunds during the year, but the process has been slower than set out by law, due to additional administrative requirements imposed by the relevant State departments.

Table of Contents

Our business, cash flow and results of operations will be adversely affected to the extent the TVA amounts owing to the group are not paid.

Our business may be adversely affected if we fail to resolve disputed tax claims with the State of Mali.

As at December 31, 2014, the group had received claims for various taxes from the State of Mali totaling \$313.0 million, in particular with respect to the Loulo, Goukoto and Morila mines. The claims have increased by \$190.0 million in the year, substantially representing \$201.3 million of additional claims received in respect of Loulo and Goukoto following the tax audits during the year, offset by foreign exchange movements. Having taken professional advice, the group considers the material claims to be without foundation and is strongly defending its position, including following the appropriate legal process for such disputes in Mali. Loulo, Goukoto and Morila have legally binding mining conventions which guarantee fiscal stability, govern the taxes applicable for the companies and allow for international arbitration in the event that a dispute cannot be resolved in the country. Management continues to engage with the Malian authorities at the highest level to resolve this issue. On November 25, 2013, Loulo instigated arbitration proceedings against the State of Mali pursuant to the terms of Loulo's Establishment Convention at the International Center for Settlement of Investment Disputes in respect of \$57.0 million of the tax claims. The arbitration process is ongoing, with hearings being held in the first quarter of 2015. The outcome of the process is expected to be concluded during 2015. Management continues to engage with the Malian authorities at the highest level to resolve this issue and the other unresolved tax claims. However, it may be necessary to instigate additional arbitration proceedings to resolve these disputes. If for any reason these disputed tax claims become due and payable the results of Morila, Goukoto and Loulo's operations and financial position would be adversely affected, as would their ability to pay dividends to their shareholders. Accordingly, our business, cash flows and financial condition will be adversely affected if anticipated dividends are not paid.

Changes in mining legislation can have significant effects on our operations.

While we have entered into binding mining conventions with the governments of Côte d'Ivoire, Mali and Senegal, changes in mining legislation in the countries in which we operate could have significant adverse effects on our results of operations. In addition, changes in mining legislation may discourage future investments in these jurisdictions, which may have an adverse impact on our ability to develop new mines and reduce future growth opportunities. Among the jurisdictions in which we currently have major operations, there are several proposed or recently adopted changes in mining legislation that could materially affect us. The governments in these jurisdictions may require us to renegotiate our mining conventions. If so, there can be no assurance that the outcome of our negotiations will not have a material adverse impact on our financial condition or operational results.

Our success may depend on our social and environmental performance.

Our ability to operate successfully in communities will likely depend on our ability to develop, operate and close mines in a manner that is consistent with the health, safety and well-being of our employees, the protection of the environment, and the creation of long term economic and social opportunities in the countries in which we operate. Mining companies are required to make a fair contribution and provide benefits to the communities and countries in which they operate, and are subject to extensive environmental, health and safety laws and regulations. As a result of public concern about the real or perceived detrimental effects of economic globalization and global climate impacts, businesses generally and large multinational corporations in natural resources industries, in particular, face increasing public scrutiny of their activities. These businesses are under pressure to demonstrate that, as they seek to generate satisfactory returns on investment to shareholders, other stakeholders, including employees, governments, communities surrounding operations and the countries in which they operate, benefit and will continue to benefit from their commercial activities. Such pressures tend to be particularly focused on companies whose activities relate to non-renewable resources and are perceived to have a high impact on their social and physical environment. The potential consequences of these pressures include reputational damage and legal suits.

Certain non-governmental organizations oppose globalization and resource development and are often vocal critics of the mining industry and its practices. Adverse publicity by such non-governmental agencies could have an adverse effect on our reputation and financial condition and could have an impact on the communities within which we operate.

In addition, our ability to successfully obtain key permits and approvals to explore for, develop and operate mines and to successfully operate in communities around the world will likely depend on our ability to develop, operate and close mines in a manner that is consistent with the creation of social and economic benefits in the surrounding communities, which may or may not be required by law. Mining operations should be designed to minimize the negative impact on such communities and the environment, for example, by modifying mining plans and operations or by relocating those affected to an agreed location. The cost of these measures could increase capital and operating costs and therefore could have an adverse impact upon our financial conditions and operations. We seek to promote improvements in health and safety, environmental performance and community relations. However, our ability to operate could be adversely impacted by accidents or events detrimental (or perceived to be detrimental) to the health, safety and well-being of our employees, the environment or the communities in which we operate.

Table of Contents

Any appreciation of the currencies in which we incur costs against the US dollar could adversely affect our results of operations and financial condition.

While our revenue is derived from the sale of gold in US dollars, a significant portion of our input costs are incurred in currencies other than the dollar, primarily Euro, Communauté Financière Africaine Franc and South African Rand. Accordingly, any appreciation in such other currencies could adversely affect our results of operations.

The profitability of our operations and the cash flows generated by these operations are significantly affected by the fluctuations in the price, cost and supply of fuel and other inputs, and we would be adversely affected by future increases in the prices of fuel and other inputs.

Fuel, power and consumables, including diesel, steel, chemical reagents, explosives and tires, form a relatively large part of our operating costs. The cost of these consumables is impacted to varying degrees by fluctuations in the price of oil, exchange rates and availability of supplies. Such fluctuations have a significant impact upon our operating costs and capital expenditure estimates and, in the absence of other economic fluctuations, could result in significant changes in the total expenditure estimates for mining projects, new and existing, and could even render certain projects non-viable.

Fuel is the primary input utilized in our mining operations, and our results are significantly affected by the price and availability of fuel, which are in turn affected by a number of factors beyond our control. Historically, fuel costs have been subject to wide price fluctuations based on geopolitical factors and supply and demand. Political unrest in certain oil producing countries has in the past led to an increase in the cost of fuel. If there are additional outbreaks of hostilities or other conflicts in oil producing areas or elsewhere, or a reduction in refining capacity (due to weather events, for example), or governmental limits on the production or sale of fuel, or restrictions on the transport of fuel, there could be reductions in the supply of fuel and significant increases in the cost of fuel.

During 2014, the average price of our landed fuel was lower than 2013. In the year ended December 31, 2014, the cost of fuel and other power generation costs comprised approximately 23% of our operating costs (2013: 20%; 2012: 25%).

While we do not currently anticipate a significant reduction in fuel availability, factors beyond our control make it impossible to predict the future availability of fuel. We are not parties to any agreements that protect us against price increases or guarantee the availability of fuel. Major reductions in the availability of fuel or significant increases in its cost for a significant period of time, would adversely affect our results of operations and profitability.

Our underground mines at Loulo and Kibali are subject to all of the risks associated with underground mining.

The business of underground mining by its nature involves significant risks and hazards. In particular, our underground mining operations could be subject to:

• rockbursts;

• seismic events;

• underground fires;

• cave-ins or falls of ground;

• discharges of gases or toxic chemicals and other environmental hazards;

• flooding;

• accidents; and

• other conditions resulting from drilling, blasting and the removal of material from an underground mine.

We are at risk of experiencing any and all of these hazards. The occurrence of any of these hazards could delay the development of the mine, production, increase cash operating costs and result in additional financial liability for us.

The use of mining contractors at certain of our operations may expose it to delays or suspensions in mining activities.

Mining contractors are used at Tongon, Loulo, Goukoto, Kibali and Morila to mine and deliver ore to processing plants and at Loulo and Kibali to develop the underground mine. As a result of our use of mining contractors, our operations are subject to a number of risks, some of which are outside our control, including:

• Negotiating agreements with contractors on acceptable terms;

The inability to replace a contractor and its operating equipment in the event that either party terminates the agreement;

- Reduced control over those aspects of operations which are the responsibility of the contractor;

- 13 -

Table of Contents

• Failure of a contractor to perform under its agreement;

• Interruption of operations or increased costs in the event that a contractor ceases its business due to insolvency or other unforeseen events;

• Failure of a contractor to comply with applicable legal and regulatory requirements, to the extent it is responsible for such compliance; and

• Problems of a contractor with managing its workforce, labor unrest or other employment issues.

In addition, we may incur liability to third parties as a result of the actions of our contractors. The occurrence of one or more of these risks could adversely affect our results of operations and financial position. We have reviewed the underground mining activities at the Loulo mine and decided to take over the mining and development activities previously managed by the underground mining contractor. Consequently, the Loulo mine is working with the contractor to agree to an orderly changeover, which is expected to be completed over the course of 2015. Any disruption to our workforce resulting from the changeover could have a material adverse effect on our operations.

The Ebola virus poses a risk to our operations.

Ebola virus cases have been identified in Mali and Senegal along with epidemics in neighboring countries, and we have formed a crisis management team to spearhead a major campaign to safeguard our employees and host communities. If the incidence of the Ebola virus spreads, it could pose risks to us in terms of potentially reduced productivity and increased medical and insurance costs. An Ebola virus outbreak could cause the closing of borders of the countries in which we operate, or neighboring countries, which poses a risk in operation of our supply chain.

Actual cash costs of production, production results, capital expenditure costs and economic returns may differ significantly from those anticipated by our feasibility studies for new development projects.

Feasibility studies and other project evaluation activities necessary to determine the current or future viability of a mining operation are often not economically beneficial. Activities often require substantial expenditure on exploration drilling to determine the extent and grade of mineralized material. It typically takes a number of years from initial feasibility studies of a mining project until development is completed and, during that time, the economic feasibility of production may change. The economic feasibility of development projects is based on many factors, including the accuracy of estimated reserves, metallurgical recoveries, capital and operating costs and future gold prices. The capital expenditure and time required to develop new mines or other projects are considerable, and changes in costs or construction schedules can affect project economics. Thus it is possible that actual costs and economic returns may

differ materially from our estimates.

In addition, there are a number of uncertainties inherent in the development and construction of any new mine, including:

- the availability and timing of necessary environmental and governmental permits;
- the timing and cost necessary to construct mining and processing facilities, which can be considerable;
 - the availability and cost of skilled labor, power, water and other materials;
- the accessibility of transportation and other infrastructure, particularly in remote locations; and
- the availability of funds to finance construction and development activities.

Kibali completed an optimized feasibility during 2011 and construction of the mine started in 2012. At Kibali, open pit mining started in July 2012 and the mine's first gold was produced in September 2013. However, there can be no assurance that the mine will not be subject to the risks and uncertainties listed above, all of which could have a material adverse effect on our operating results and financial condition.

At Massawa (Senegal), a technical and financial study was completed on the open pit enabling us to declare mineral reserves in 2010. In 2012 it was decided to focus on understanding the geological and metallurgical controls of the project. The current plan is to progress the Massawa project review and make a decision on revising the feasibility study scope in 2015. There can be no assurance that the Massawa project will ultimately result in a new commercial mining operation, or that such new commercial mining operations would be successful.

The underground feasibility study on Goukoto was successfully completed at the end of 2014. Work on the portal in the south of the pit is planned to start in 2018 with access to ore anticipated in 2019. However, there can be no assurance that the Goukoto underground project will not be subject to the risks and uncertainties listed in this section, all of which could have a material adverse effect on our operating results and financial condition.

We conduct mining, development and exploration activities in countries with developing economies and are subject to the risks of political and economic instability associated with these countries.

We currently conduct mining, development and exploration activities in countries with developing economies. These countries and other emerging markets in which we may conduct operations have, from time to time, experienced economic or political instability. It is difficult to predict the future political, social and economic direction of the countries in which we operate, and the impact government decisions may have on our business. Any political or economic instability in the countries in which we currently operate could have a material adverse effect on our business and results of operations.

- 14 -

Table of Contents

The countries of Mali, Senegal, DRC and Côte d'Ivoire have, since independence, experienced some form of political upheaval with varying forms of changes of government taking place.

Goods are supplied to our operations in Mali primarily by road through Senegal and Côte d'Ivoire, which at times have been disrupted by geopolitical issues. Any present or future policy changes in the countries in which we operate, or through which we are supplied, may in some way have a significant effect on our operations and interests.

The mining laws of Mali, Côte d'Ivoire, Senegal and DRC stipulate that, should an economic orebody be discovered on a property subject to an EP, a permit that allows processing operations to be undertaken must be issued to the holder. Legislation in certain countries currently provides for the relevant government to acquire a free ownership interest in any mining project. The requirements of the various governments as to the foreign ownership and control of mining companies may change in a manner which adversely affects us.

In addition, unforeseen events, including war, terrorism and other international conflicts could disrupt our operations and disrupt the operations of our suppliers. Such events could make it difficult or impossible for us to conduct our mining operations, including delivering our products and receiving materials from suppliers.

We are subject to various political and economic uncertainties associated with operating in the DRC, and the success of the Kibali mine will depend in large part on our ability to overcome significant challenges.

We are subject to risks associated with operating the Kibali mine in the DRC. The Kibali mine is located in the north-east region of the DRC and is subject to various levels of political, economic and other risks and uncertainties associated with operating in the DRC. Some of these risks include political and economic instability, high rates of inflation, severely limited infrastructure, lack of law enforcement, labor unrest, and war and civil conflict. In addition, the Kibali mine is subject to the risks inherent in operating in any foreign jurisdiction including changes in government policy, restrictions on foreign exchange, changes in taxation policies, and renegotiation or nullification of existing concessions, licenses, permits and contracts.

The DRC is an impoverished country with physical and institutional infrastructure that is in a poor condition. It is in transition from a largely state-controlled economy to one based on free market principles, and from a non-democratic political system with a centralized ethnic power base to one based on more democratic principles. There can be no assurance that these changes will be effected or that the achievement of these objectives will not have material adverse consequences for the Kibali mine.

Any changes in mining or investment policies or shifts in political attitude in the DRC may adversely affect operations and/or profitability of the Kibali mine. Operations may be affected in varying degrees by government regulations with respect to, but not limited to, restrictions on production, price controls, export controls, currency remittance, income taxes, foreign investment, maintenance of claims, environmental legislation, land use, land claims of local people, water use and mine safety. These changes may impact the profitability and viability of the Kibali mine.

Furthermore, the Kibali mine is located in a remote area of the DRC, which lacks basic infrastructure, including adequate roads and other transport, sources of power, water, housing, food and transport. In order to develop any of the mineral interests, facilities and material necessary to support operations in the remote locations in which they are situated must be established. The remoteness of the mineral interests would affect the potential viability of mining operations, as we would also need to establish substantially greater sources of power, water, physical plant, roads and other transport infrastructure than are currently present in the area. Hydropower stations are utilized at Kibali, which necessarily involve maintaining existing stations and building new hydropower stations and also obtaining certain government licenses relating to their operation. The first of three hydropower stations was completed in 2014 and a further additional two hydropower stations are still to be completed.

Moreover, the north-east region of the DRC has undergone civil unrest and instability that could have an impact on political, social or economic conditions in the DRC generally. There has been recent turmoil in the Eastern DRC, to the south of Kibali, following the defeat of the M23 rebel group in late 2013. A sufficient level of stability must be maintained in order for us to continue to operate the Kibali mine. The impact of unrest and instability on political, social or economic conditions in the DRC could result in the impairment of the exploration, development and operations at the Kibali mine.

We are subject to various political and economic uncertainties associated with operating in Côte d'Ivoire, that could significantly affect the success of the Tongon mine.

We have been subject to risks associated with operating the Tongon mine in Côte d'Ivoire. Côte d'Ivoire has experienced several years of political disruptions, including an attempted coup d'état and civil war. A dispute over the Côte d'Ivoire presidential election in November 2010 resulted in the establishment of two rival governments and the imposition of targeted sanctions. The political impasse, however, was resolved during 2011, and while the Tongon mine continued to operate throughout the crisis, at times we were unable to ship and sell our Tongon gold production, which resulted in timing discrepancy between our gold produced and the

Table of Contents

recognition of revenue from gold sales. While all our gold production was subsequently sold and the country reverted to normality, there can be no assurance that similar events may not occur in the future which would have a material adverse effect on our gold production and financial results. Our operations and financial conditions could be impacted by future political and economic instabilities.

Certain factors may affect our ability to support the carrying value of our property, plant and equipment, and other assets on our consolidated statement of financial position.

We review and test the carrying amount of our assets on an annual basis when events or changes in circumstances suggest that the net book value may not be recoverable. If there are indications that impairment may have occurred, we prepare estimates of expected future discounted cash flows for each group of assets. Assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units) for purposes of assessing impairment. Expected future cash flows are inherently uncertain, and could materially change over time. Such cash flows are significantly affected by reserve and production estimates, together with economic factors such as spot and forward gold prices, discount rates, currency exchange rates, estimates of costs to produce reserves and future capital expenditure to extract reserves under the approved life of mine plan.

We may incur losses or lose opportunities for gains as a result of any future use of derivative instruments to protect us against low gold prices.

We have from time to time used derivative instruments to protect the selling price of some of our anticipated gold production. The intended effect of our derivative transactions was to lock in a fixed sale price for some of our future gold production to provide some protection against a subsequent fall in gold prices. Although we currently do not use derivative instruments to protect us against low gold prices at our operations, we may in the future determine to implement the use of derivatives in connection with a portion of our anticipated gold production.

Derivative transactions can result in a reduction in revenue if the instrument price is less than the market price at the time the hedged sales are recognized. Moreover, our decision to enter into a given instrument would be based upon market assumptions. If these assumptions are not ultimately met, significant losses or lost opportunities for significant gains may result. In all, the use of these instruments may result in significant losses which would prevent us from realizing the positive impact of any subsequent increase in the price of gold on the portion of production covered by the instrument.

Under our joint venture agreements with AngloGold Ashanti Limited, or AngloGold Ashanti, we operate the Morila mine and the Kibali mine by means of a joint venture committee, and any disputes with AngloGold Ashanti over the management of the Morila mine or the Kibali mine could adversely affect our business.

We jointly control Morila, the owner of the Morila mine, and Kibali, the owner of the Kibali mine, with AngloGold Ashanti under joint venture agreements. We are responsible for the day-to-day operations of Morila and Kibali, subject to the overall management control of Morila and Kibali boards, respectively. Substantially all major management decisions, including approval of a budget for the Morila mine and the Kibali mine, must be approved by the Morila and Kibali boards, respectively. We and AngloGold Ashanti retain equal representation on the boards, with neither party holding a deciding vote. If a dispute arises between us and AngloGold Ashanti with respect to the management of Morila or Kibali, and we are unable to amicably resolve the dispute, we may have to participate in arbitration or other proceedings to resolve the dispute, which could materially and adversely affect our business.

Our mines and projects face many risks related to their present or future operations that may impact cash flows and profitability.

Our mines and projects are subject to all of the operating hazards and risks normally incident to exploring for, developing and operating mineral properties and mines, such as:

- encountering unusual or unexpected formations;
 - environmental pollution;
 - mechanical breakdowns;
 - safety-related stoppages;
- work stoppages or other disruptions in labor force;
- electrical power and fuel supply interruptions;
- unanticipated ground conditions; and
- personal injury and flooding.

Table of Contents

During 2011, Tongon's operations were negatively impacted by flooding as a result of the rainy season and by problems encountered during the change-over from diesel generated power to Côte d'Ivoire's national grid. Also, in November 2011, the Tongon mine suffered a major failure of the barring gear at its No 1 mill. As a result, management also shut down Tongon's No 2 mill as well in the interests of personal safety and to protect the No 2 mill from a similar failure. In November 2011 and March 2012, the Tongon mine experienced temporary work stoppages during the course of negotiating a mine level agreement with a newly established union. During 2012 the Tongon mine was plagued by a series of operational challenges, including underperformance in the mining of the open pit as the mine struggled to manage the transition from softer oxide material to fresh rock. Also, the mine experienced frequent outages of grid power which disrupted the processing plant. Additionally, during December 2012 there was a fire in the milling circuits which resulted in both mills being offline for one week followed by lower throughput and recoveries. These issues led to gold production at Tongon missing its target by 26%. The plant was restored to full production by the end of January 2013 and the power problems were addressed during 2013. The mine continued to experience problems with recovery in 2013 and 2014 which contributed to Tongon missing its target by 17% in 2013 and 13% in 2014, as well as issues associated with the crushing circuit, which required certain of the installed crushers to be replaced in 2014. The mine continues to engineer out key process deficiencies and improve operator skills and plant maintenance. Upgrades to the flotation circuits at the mine are forecasting for completion in the first quarter of 2015.

During 2011, the Goukoto's mine operations were disrupted by flooding following unusually heavy rains. In July 2009, the Loulo mine experienced some disruption, caused by a small group of disaffected people unable to secure long term employment at the mine. The disruption resulted in some damage to the tailings pipeline as well as to some accommodation units and other property. All operations were suspended for 36 hours, following which all mining and processing operations were restored and operating back at normal capacity.

There can be no assurance that similar operational issues will not happen in the future, or that such events will not adversely affect our results of operations.

Mining operations and projects are vulnerable to supply chain disruption and our operations could be adversely affected by shortages of, as well as lead times to deliver fuel, strategic spares, critical consumables, mining equipment or metallurgical plant.

Our operations could be adversely affected by both shortages and long lead times to deliver fuel, strategic spares, critical consumables, mining equipment and metallurgical plant. We have limited influence over suppliers and manufacturers of these items. In certain cases there are a limited number of suppliers for fuel, certain strategic spares, critical consumables, mining equipment or metallurgical plant who command superior bargaining power relative to us. We could at times face limited supply or increased lead time in the delivery of such items. There can be no assurance that such limited supply or increased lead time in the delivery of items will not happen in the future, or that such events will not adversely affect our results of operations.

Failure to comply with the U.S. Foreign Corrupt Practices Act, Corruption (Jersey) Law and the UK Bribery Act could subject us to penalties and other adverse consequences. We could suffer losses from corrupt or fraudulent business practices.

We abide by the provisions of the US Foreign Corrupt Practices Act, Corruption (Jersey) Law and the UK Bribery Act, which generally prohibit companies and their intermediaries from making improper payments to officials for the purpose of obtaining or retaining business. In addition, we are required to maintain records that represent our transactions and have an adequate system of internal accounting controls. The compliance mechanisms and monitoring programs that we have in place may not adequately prevent or detect possible violations under applicable anti-bribery and corruption legislation. There can be no assurance that our internal control policies and procedures always will protect us from recklessness, fraudulent behavior, dishonesty or other inappropriate acts committed by our affiliates, employees or agents. As such, our corporate policies and processes may not prevent all potential breaches of law or other governance practices. Failure to comply with such legislation may result in severe criminal or civil sanctions, and we may be subject to other liabilities, including fines, prosecution, potential debarment from public procurement and reputational damage, all of which could have a material adverse effect on our business, consolidated results of operations, and consolidated financial condition. In addition, investigations by governmental authorities could have a material adverse effect on our business, consolidated results of operations, and consolidated financial condition. We are also subject to the risks that our employees, joint venture partners, and agents may fail to comply with other applicable laws.

We may be required to seek funding from the global credit and capital markets to develop our properties, and weakness in those markets could adversely affect our ability to obtain financing and capital resources.

We require substantial funding to develop our properties, and may be required to seek funding from the credit and capital markets to finance these activities. Our ability to obtain outside financing will depend upon the price of gold and the market's perception of its future price, and other factors outside of our control. We may not be able to obtain funding on acceptable terms when required, or at all.

The credit and capital markets experienced serious deterioration in 2008, including the failure of significant and established financial institutions in the US and abroad, which continued throughout 2014 and may continue in 2015 and beyond, and the

Table of Contents

conditions in these markets have continued to be difficult since then and may continue to be difficult in the future, which could have an impact on the availability and terms of credit and capital in the near term. Although general global economic conditions have improved, the credit and capital markets for commodities have not improved to the same degree. The deteriorating financial condition of certain government authorities has significantly increased the potential for sovereign defaults in a number of jurisdictions, including within the European Union. If uncertainties in these markets continue, or these markets deteriorate further, it could have a material adverse effect on our ability to raise capital. Failure to raise capital when needed or on reasonable terms may have a material adverse effect on our business, financial condition and results of operations. A continued or worsened slowdown in the financial markets or other economic conditions, including but not limited to consumer spending, employment rates, inflation, fuel and energy costs, lack of available credit, the state of the financial markets, interest rates and tax rates may affect our growth and profitability.

To ensure additional liquidity, in 2013 we entered into a \$200.0 million unsecured revolving credit facility with HSBC and a syndicate of three other banks. In 2014 we cancelled the existing credit facility, which was undrawn at that time, and entered into a new \$400.0 million unsecured revolving credit facility with HSBC and an extended banking syndicate. If any of the lenders are unable to fulfill their future commitments, our liquidity could be impacted, which could have a material unfavorable impact on our results of operations and financial condition.

If we draw down on our credit facility, our indebtedness could adversely impact our business.

Under the terms of the credit facility we entered into in 2014 we are obligated to meet certain financial and other covenants. Our ability to meet these covenants and to service our debt (should the credit facility be drawn down) will depend on our future financial performance which will be affected by our operating performance as well as by financial and other factors, some of which are beyond our control.

Our operations are located in countries where tax laws and policies may change rapidly and unpredictably and such changes and policies may adversely affect our financial condition and results of operations.

Our failure to adapt to changes in tax regimes and regulations in the countries in which we operate may result in fines, financial losses and have a negative impact on our corporate reputation. In addition, if we fail to react to tax notifications from authorities, we could incur financial losses or the seizure of our assets. If we are unable to enforce existing tax legislation or incorrectly applied tax legislation, we may pursue arbitration or other proceedings to resolve the matter, all of which could materially and adversely affect our business.

The failure of any bank in which we deposit our funds could reduce the amount of cash we have available for operations.

Most of our cash deposited with banks is not insured and would be subject to the risk of bank failure. If any of the banking institutions in which we have deposited funds ultimately fails, we may lose our deposits. The loss of our deposits would reduce the amount of cash we have available for operations and additional investments in our business, and would have a material adverse effect on our financial condition.

The SEC has adopted rules that may affect mining operations in the DRC.

The SEC adopted final rules pursuant to the Dodd Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) regarding disclosure on potential conflict minerals that are necessary to the functionality or production of a product manufactured by a company that files reports with the SEC. Under the final rules, an issuer that mines conflict minerals, such as Randgold, is not deemed to be manufacturing or contracting to manufacture those minerals, unless the issuer also engages in manufacturing, whether directly or indirectly through contract. Though we are not subject to the disclosure requirements of the final rules, we may be called upon by other entities we contract with to provide information to them for their own supply-chain due diligence investigations. This may result in the increased cost of demonstrating compliance in connection with the sale of gold emanating from the DRC and its neighbors. The complexities of the gold supply chain, especially as they relate to 'scrap' or recycled gold, and the fragmented and often unregulated supply of artisanal and small-scale mined gold are such that there may be significant uncertainties at each stage in the chain as to the origin of the gold, and as a result of uncertainties in the process, the costs of due diligence and audit, or the reputational risks of defining their product or a constituent part as containing a 'conflict mineral' may be too burdensome for the buyers of our gold. Accordingly, they may decide to switch supply sources. This could have a material negative impact on the gold industry, our relationship with the buyers of our gold, and our financial results.

Inflation may have a material adverse effect on our operations.

Some of our operations are located in countries that have and may continue to experience high rates of inflation during certain periods. It is possible that significantly higher future inflation in countries in which we operate may result in increased future operational costs in local currencies. This could have a material adverse effect upon our operations and financial conditions.

Table of Contents

Regulations and pending legislation governing issues involving climate change could result in increased operating costs which could have a material adverse effect on our business.

A number of governments or governmental bodies have introduced or are contemplating regulatory changes in response to various climate change interest groups and the potential impact of climate change. Legislation and increased regulation regarding climate change could impose significant costs on us, our venture partners and our suppliers, including increased energy, capital equipment, environmental monitoring and reporting and other costs to comply with such regulations. Any adopted future climate change regulations could also negatively impact our ability to compete with companies situated in areas not subject to such limitations. Given the political significance and uncertainty around the impacts of climate change and how it should be dealt with, we cannot predict how legislation and regulation will affect our financial condition, operating performance and ability to compete. Furthermore, even without such regulation, increased awareness and any adverse publicity in the global marketplace about potential impacts on climate change by us or other companies in our industry could harm our reputation. The potential physical impacts of climate change on our operations are highly uncertain, and would be particular to the geographic circumstances in areas in which we operate. These may include changes in rainfall and storm patterns and intensities, water shortages, changing sea levels and changing temperatures. These impacts may adversely impact the cost, production and financial performance of our operations.

Some of our operations are carried out in geographical areas which lack adequate infrastructure.

Mining, processing, development and exploration activities depend, in some part, on adequate infrastructure. Reliable roads, power sources and water supply are important factors which affect our operating costs. A lack of infrastructure or varying weather phenomena, sabotage, terrorism or other interferences in the maintenance or provision of such infrastructure could affect our operations and financial conditions.

Establishing infrastructure for our development projects requires significant resources, identification of adequate sources of raw materials and supplies, and necessary cooperation from national and regional governments, none of which can be assured.

We may not pay dividends to shareholders in the future.

We paid our eighth dividend to ordinary shareholders in 2014. It is our policy to pay dividends if profits and funds are available for that purpose. Whether or not funds are available depends on a variety of factors, including capital expenditure. We cannot guarantee that dividends will be paid in the future.

If we are unable to attract and retain key personnel our business may be harmed.

Our ability to bring additional mineral properties into production and explore our extensive portfolio of mineral rights will depend, in large part, upon the skills and efforts of a small group of management and technical personnel, including D. Mark Bristow, our Chief Executive Officer. If we are not successful in retaining, developing or attracting highly qualified individuals in key management positions our business may be harmed. The loss of any of our key personnel could adversely impact our ability to execute our business plan.

Our insurance coverage may prove inadequate to satisfy future claims against us.

We may become subject to liabilities, including liabilities for pollution or other hazards, against which we have not insured adequately or at all, or cannot insure. Our insurance policies contain exclusions and limitations on coverage. Our current insurance policies provide worldwide indemnity of \$100.0 million in relation to legal liability incurred as a result of death, injury, disease of persons and/or loss of or damage to property. Main exclusions under this insurance policy, which relates to our industry, include war, nuclear risks, silicosis, asbestosis or other fibrosis of the lungs or diseases of the respiratory system with regard to employees, and gradual pollution. In addition, our insurance policies may not continue to be available at economically acceptable premiums. As a result, in the future our insurance coverage may not cover the extent of claims against us.

It may be difficult for you to effect service of process and enforce legal judgments against us or our affiliates.

We are incorporated in Jersey, Channel Islands and a majority of our directors and senior executives are not residents of the United States. Virtually all of our assets and the assets of those persons are located outside the United States. As a result, it may not be possible for you to effect service of process within the United States upon those persons or us. Furthermore, the United States and Jersey currently do not have a treaty providing for the reciprocal recognition and enforcement of judgments (other than arbitration awards) in civil and commercial matters. Consequently, it may not be possible for you to enforce a final judgment for payment rendered by any federal or state court in the United States based on civil liability, whether or not predicated solely upon United States Federal securities laws against those persons or us.

Table of Contents

In order to enforce any judgment rendered by any Federal or state court in the United States in Jersey, proceedings must be initiated by way of common law action before a court of competent jurisdiction in Jersey. The entry of an enforcement order by a court in Jersey is conditional upon the following:

• that the court which pronounced the judgment has jurisdiction to entertain the case according to the principles recognized by Jersey law with reference to the jurisdiction of the foreign courts;

- that the judgment is final and conclusive – it cannot be altered by the courts which pronounced it;

• that there is payable pursuant to a judgment a sum of money, not being a sum payable in respect of tax or other charges of a like nature or in respect of a fine or other penalty;

- that the judgment has not been prescribed;

- that the courts of the foreign country have jurisdiction in the circumstances of the case;

- that the judgment was not obtained by fraud; and

that the recognition and enforcement of the judgment is not contrary to public policy in Jersey, including observance of the rules of natural justice which require that documents in the United States proceeding were properly served on the defendant and that the defendant was given the right to be heard and represented by counsel in a free and fair trial before an impartial tribunal.

Furthermore, it is doubtful whether you could bring an original action based on United States Federal securities laws in a Jersey court.

We are subject to significant corporate regulation as a public company and failure to comply with all applicable regulations could subject us to liability or negatively affect our share price.

As a publicly traded company we are subject to a significant body of regulation. While we have developed and instituted a corporate compliance program based on what we believe are the current best practices in corporate governance and continue to update this program in response to newly implemented or changing regulatory requirements, there can be no assurance that we are or will be in compliance with all potentially applicable corporate regulations. For example, there can be no assurance that in the future our management will not find a material weakness in connection with its annual review of our internal control over financial reporting pursuant to Section 404

of the US Sarbanes-Oxley Act of 2002. If we fail to comply with any of these regulations, we could be subject to a range of regulatory actions, fines or other sanctions or litigation. If we must disclose any material weakness in our internal control over financial reporting, our share price could decline.

We utilize information technology and communications systems, the failure of which could significantly impact our operations and business.

We are dependent upon information technology systems in the conduct of our operations. Our information technology systems are subject to disruption, damage or failure from a variety of sources, including, without limitation, computer viruses, security breaches, cyber-attacks, natural disasters and defects in design. Cybersecurity incidents, in particular, are evolving and include, but are not limited to, malicious software, attempts to gain unauthorized access to data and other electronic security breaches that could lead to disruptions in systems, unauthorized release of confidential or otherwise protected information and the corruption of data. Various measures have been implemented to manage our risks related to information technology systems and network disruptions. However, given the unpredictability of the timing, nature and scope of information technology disruptions, we could potentially be subject to production downtimes, operational delays, the compromising of confidential or otherwise protected information, destruction or corruption of data, security breaches, other manipulation or improper use of our systems and networks or financial losses from remedial actions, any of which could have a material adverse effect on our cash flows, competitive position, financial condition or results of operations.

We maintain global information technology and communication networks and applications to support our business activities. Information technology security processes may not prevent future malicious actions, denial-of-service attacks, or fraud, resulting in corruption of operating systems, theft of commercially sensitive data, misappropriation of funds and business and operational disruption. Material system breaches and failures could result in significant interruptions that could in turn affect our operating results and reputation.

Risks Relating to Our Industry

The exploration of mineral properties is highly speculative in nature, involves substantial expenditures, and is frequently unproductive.

We must continually seek to replace our ore reserves depleted by production to maintain production levels over the long term. Ore reserves can be replaced by expanding known orebodies or exploring for new deposits. Exploration for gold is highly speculative

Table of Contents

in nature. Our future growth and profitability will depend, in part, on our ability to identify and acquire additional mineral rights, and on the costs and results of our continued exploration and development programs. Many exploration programs, including some of ours, do not result in the discovery of mineralization and any mineralization discovered may not be of sufficient quantity or quality to be profitably mined. Our mineral exploration rights may not contain commercially exploitable reserves of gold. Uncertainties as to the metallurgical recovery of any gold discovered may not warrant mining on the basis of available technology.

If we discover a viable deposit, it usually takes several years from the initial phases of exploration until production is possible. During this time, the economic feasibility of production may change.

Moreover, we will use the evaluation work of professional geologists, geophysicists, and engineers for estimates in determining whether to commence or continue mining. These estimates generally rely on scientific and economic assumptions, which in some instances may not be correct, and could result in the expenditure of substantial amounts of money on a deposit before it can be determined whether or not the deposit contains economically recoverable mineralization. As a result of these uncertainties, we may not successfully acquire additional mineral rights, or identify new proven and probable reserves in sufficient quantities to justify commercial operations in any of our properties.

If management determines that capitalized costs associated with any of our gold interests are not likely to be recovered, we would recognize an impairment provision against the amounts capitalized for that interest. All of these factors may result in losses in relation to amounts spent which are found not to be recoverable.

Title to our mineral properties may be challenged which may prevent or severely curtail our use of the affected properties.

Title to our properties may be challenged or impugned, and title insurance is generally not available. Each sovereign state is the sole authority able to grant mineral property rights, and our ability to ensure that we have obtained secure title to individual mineral properties or mining concessions may be severely constrained. Our mineral properties may be subject to prior unregistered agreements, transfers or claims, and title may be affected by, among other things, undetected defects. In addition, we may be unable to operate our properties as permitted or to enforce our rights with respect to our properties.

Our ability to obtain desirable mineral exploration projects in the future may be adversely affected by competition from other exploration companies.

We compete with other mining companies in connection with the search for and acquisition of properties producing or possessing the potential to produce gold. Existing or future competition in the mining industry could materially and adversely affect our prospects for mineral exploration and success in the future.

In addition, we compete with other mining companies to attract and retain key executives, skilled labor, contractors and other employees. We also compete with other mining companies for specialized equipment, components and supplies necessary for exploration and development, as well as for rights to mine properties. If we are unable to continue to attract and retain skilled and experienced employees, obtain the services of skilled personnel and contractors or specialized equipment or supplies, or acquire additional rights to mine properties, our competitive position or results of operations could be adversely impacted.

Artisanal mining can disrupt our business and expose us to liability.

Artisanal miners are active on, or adjacent to, many of our properties. Artisanal mining is associated with a number of negative impacts, including environmental degradation, human rights abuse and funding of conflict. We do not purchase any gold from artisanal miners. There is a misconception that artisanally-mined gold is channeled through large-scale mining operators and such misconceptions have a negative impact on the reputation of the mining industry. The activities of illegal miners could cause damage to our properties, including pollution, underground fires, or personal injury or death. We could potentially be held responsible. Illegal mining and theft could result in lost gold reserves, mine stoppages, and have a material adverse effect on our operations and financial condition.

Our operations are subject to extensive governmental and environmental regulations, which could cause us to incur costs that adversely affect our results of operations.

Our mining facilities and operations are subject to substantial government laws and regulations, concerning mine safety, land use and environmental protection. We must comply with requirements regarding exploration operations, public safety, employee health and safety, use of explosives, air quality, water pollution, noxious odor, noise and dust controls, reclamation, solid waste, hazardous waste and wildlife as well as laws protecting the rights of other property owners and the public.

Any failure on our part to be in compliance with these laws, regulations, and requirements with respect to our properties could result in us being subject to substantial penalties, fees and expenses, significant delays in our operations or even the complete shutdown of our operations. We provide for estimated environmental rehabilitation costs when the related environmental disturbance takes place. Estimates of rehabilitation costs are subject to revision as a result of future changes in regulations and cost estimates. The costs associated with compliance with government regulations may ultimately be material and adversely affect our results of operations and financial condition.

Table of Contents

If our environmental and other governmental permits are not renewed or additional conditions are imposed on our permits, our financial condition and results of operations may be adversely affected.

Generally, compliance with environmental and other government regulations requires us to obtain permits issued by governmental agencies. Some permits require periodic renewal or review of their conditions. We cannot predict whether we will be able to renew these permits or whether material changes in permit conditions will be imposed. Non-renewal of a permit may cause us to discontinue the operations requiring the permit, and the imposition of additional conditions on a permit may cause us to incur additional compliance costs, either of which could have a material adverse effect on our financial condition and results of operations.

Labor disruptions could have an adverse effect on our operating results and financial condition.

Our operations are highly unionized, and strikes are legal in the countries in which we operate. Therefore, our operations are at risk of having work interrupted for indefinite periods due to industrial action, such as strikes by employee collectives. Should long disruptions take place on our operations, the results from our operations and their financial condition could be materially and adversely affected.

AIDS and tropical disease outbreaks pose risks to us in terms of productivity and costs.

The incidence of AIDS in the DRC, Mali, Côte d'Ivoire and Senegal, which has been forecast to increase over the next decade, poses risks to us in terms of potentially reduced productivity and increased medical and insurance costs. The exact extent to which our workforce is infected is not known at present. The prevalence of AIDS in the countries in which we operate and among our workforce could become significant. Significant increases in the incidence of AIDS infection and AIDS-related diseases among members of our workforce in the future could adversely impact our operations and financial condition.

Malaria and other tropical diseases pose significant health risks at all of our operations in West Africa and Central Africa where such diseases may assume epidemic proportions. Malaria is a major cause of death and also gives rise to absenteeism in employees and contractors. Consequently, if uncontrolled, the disease could adversely impact our operations and financial condition.

Item 4. Information on the Company

A. HISTORY AND DEVELOPMENT OF THE COMPANY

Randgold Resources Limited was incorporated under the laws of Jersey, Channel Islands in August 1995, to engage in the exploration and development of gold deposits in Sub-Saharan Africa. Our principal executive offices are located at 3rd Floor Unity Chambers, 28 Halkett Street, St. Helier, Jersey, JE2 4WJ Channel Islands and our telephone number is (011 44) 1534 735-333. Our agent in the United States is CT Corporation System, 111 Eighth Avenue, New York, New York 10011.

We discovered the Morila deposit during December 1996 and we subsequently financed, built and commissioned the Morila mine.

During July 2000, we concluded the sale of 50% of our interest in Morila Limited (and also a shareholder loan made by us to Morila Limited) to AngloGold Ashanti for \$132.0 million in cash.

We have an 80% controlling interest in Société des Mines de Loulo SA, or Loulo, through a series of transactions culminating in April 2001. In February 2004, we announced that we would develop a new mine at Loulo in western Mali. The Loulo mine commenced operations in October 2005 and mines the Gara (formerly Loulo 0) and Yalea deposits. In addition, the board agreed to proceed with the development of the underground mine and, after the award of the development contract, work commenced with the construction of the boxcut at the Yalea mine in August 2006. We accessed first ore at Yalea in April 2008 with full production beginning in 2010. We commenced development of Loulo's second underground mine, Gara, and started mining in 2011. We discovered the Yalea deposit in 1997.

Table of Contents

We have an 80% controlling interest in Goukoto, which owns the Goukoto mine. The Goukoto mine commenced mining in January 2011 and processes its ore by way of a toll treatment agreement with the Loulo mine, in June 2011.

We have an 89% controlling interest in Tongon, which owns the Tongon mine. The Tongon mine commenced mining in April 2010 and first gold was produced in 2010.

In April 2004, Resolute Mining Limited, or Resolute, acquired the Syama mine from us. The agreement entered into in June 2004 between the parties provides for the payment of a production royalty by Resolute to us relating to Syama's production equal to \$10/oz on the first million ounces produced by Syama and \$5/oz on the next 3Moz produced by Syama. This royalty payment is capped at \$25.0 million. We received our first royalties in 2009. During 2014, quarterly royalty payments were received from Resolute throughout the year.

Effective on June 11, 2004, we undertook a split of our ordinary shares, which increased our issued share capital from 29,263,385 to 58,526,770 ordinary shares. In connection with this share split, our ordinary shareholders of record on June 11, 2004 received two \$0.05 ordinary shares for every one \$0.10 ordinary share they held. Following the share split, each shareholder held the same percentage interest in us; however, the trading price of each share was adjusted to reflect the share split. ADS holders were affected the same way as shareholders and the ADS ratio remains one ADS to one ordinary share.

On October 15, 2009, we completed the acquisition of 50% of Moto Goldmines Limited (Moto Goldmines), in a joint venture with AngloGold Ashanti, which resulted in joint control of a 70% interest in the Kibali mine in the DRC. On December 22, 2009 we completed a further acquisition of a 20% interest, on behalf of the joint venture, from Société des Mines d'Or de Kilo-Moto SA (SOKIMO), the parastatal mining company of the DRC, resulting in an effective interest in the Kibali mine of 45%. The Kibali mine commenced mining in 2012 and first gold was produced in 2013.

During November 2009, we completed the sale of our Kiaka gold project to Volta Resources Inc., for CAD\$4.0 million in cash and 20 million Volta Resources Inc. shares. During 2010, we sold 15.5 million Volta Resources Inc. shares for a net profit of \$19.3 million. We had received CAD\$4.0 million in full by the end of 2011.

Effective December 19, 2013, Volta Resources Inc. and B2 Gold Corp completed a Canadian law combination which resulted in Volta Resources Inc. becoming a wholly-owned subsidiary of B2 Gold Corp. As a result of this combination we received 898,003 shares in B2 Gold Corp in exchange for our Volta Resources Inc. shares.

We conduct our mining operations through:

- a 50% joint venture interest in Morila Limited (which in turn owns an 80% interest in the Morila mine);
 - an 80% interest in Loulo;
 - an 80% interest in Goukoto;
 - an 89% interest in Tongon; and

a 50% joint venture interest in Kibali (Jersey) Limited (which in turn indirectly owns a 90% interest in the Kibali mine).

We also have an 83.25% interest in the Massawa feasibility project.

Principal Capital Expenditure

Capital expenditure incurred for the year ended December 31, 2014 totaled \$179.3 million compared to \$303.1 million for the year ended December 31, 2013, and \$272.2 million for the year ended December 31, 2012. Although lower than 2014, significant capital expenditure is forecasted to be incurred across the group during the year to support the planned continued growth in production, especially at Kibali, of approximately \$280.0 million (100% of the project), and the ongoing development of the underground mines at Loulo, where total capital at the Loulo-Goukoto complex is forecast at \$155.0 million. Project and sustaining capital at Tongon, including completion of the flotation circuit upgrade, is estimated at \$20.0 million, and \$12.0 million will be spent at Morila (100% of the project), with Massawa capital expenditure estimated at \$10.0 million. Consequently, total group capital expenditure for 2015 is expected to be approximately \$330.0 million (including attributable share of joint ventures). The capital expenditure is projected to be financed out of internal funds.

Table of Contents

Recent Developments

The Kibali gold mine in the DRC poured its first gold on September 24, 2013, ahead of the originally forecasted date for the fourth quarter of 2013 and the mine moved into commercial production on one mill stream during October 2013. The secondary crushing, flotation and concentrate handling circuits were completed in 2014. The first hydropower plant entered operation in 2014. A sophisticated paste backfill system was installed at the Yalea and Gara underground mines. The feasibility study into the viability of an underground mine below the Goukoto pit was successfully completed at the end of 2014.

B. BUSINESS OVERVIEW

OVERVIEW

We engage in gold mining, exploration and related activities. Our activities are focused on West and Central Africa, some of the most promising areas for gold discovery in the world. In Mali, we have an 80% controlling interest in the Loulo mine through Loulo. The Loulo mine is currently mining from two underground mines. We also have an 80% controlling interest in the Goukoto mine through Goukoto. We own 50% of Morila Limited, which in turn owns 80% of Morila, the owner of the Morila mine in Mali. In addition, we own an effective 89% controlling interest in the Tongon mine located in the neighboring country of Côte d'Ivoire, which was commissioned in November 2010. We also own an effective 83.25% controlling interest in the Massawa project in Senegal where we completed a technical and financial study in December 2009. In 2009, we acquired an effective 45% interest in the Kibali mine, which is located in the DRC. Since that time we have updated the feasibility study and constructed the mine such that we commissioned the first mill stream in 2013 and commissioned the second mill stream in 2014. We also have exploration permits and licenses covering substantial areas in Côte d'Ivoire, DRC, Mali, and Senegal. At December 31, 2014, we declared proven and probable reserves of 15Moz attributable to our percentage ownership interests in Loulo, Morila, Tongon, Goukoto, Massawa and Kibali.

Our strategy is to create value for all our stakeholders by finding, developing and operating profitable gold mines. We seek to discover significant gold deposits, either from our own phased exploration programs or the acquisition of early stage to mature exploration programs. We actively manage both our portfolio of exploration and development properties and our risk exposure to any particular geographical area. We also routinely review opportunities to acquire development projects and existing mining operations and companies.

Loulo

In February 2004, we announced that we would develop a new mine at Loulo in western Mali. In 2005, we commenced open pit mining operations at the Gara and Yalea pits. In 2010, an application was made to split the Loulo and Goukoto permits. In 2011 mining ceased in the Gara open pit. In 2014, its ninth year of production, the Loulo mine produced 382,263 oz of gold at a total cash cost of \$713/oz. We currently anticipate that mining at Loulo will continue through 2028.

We commenced development of the Yalea underground mine in August 2006, where first ore was accessed in April 2008. We commenced development of Loulo's second underground mine, Gara, in 2010 with first ore being intersected during the second quarter of 2011 and stoping began in November 2011. From June 2011, ore from Goukoto was processed through the Loulo processing plant following the conclusion of a toll-treatment agreement between the two mines. The commencement of the toll-treatment of ore from Goukoto resulted in a reduction of ore processing with respect to the Loulo mine. Mining of the Yalea South pushback pit was completed in 2013. In 2013, cemented aggregate fill (CAF) came into full production at both Yalea and Gara and the Gara underground conveyor and crushing system was commissioned.

The Yalea, Gara and Baboto grade and tonnage models were updated during 2014. This included additional infill drilling on the Gara and Yalea deposits, while infill reverse circulation (RC) drilling was completed on Baboto. The Yalea and Gara underground mines are now in full production and paste backfill plants at both mines have been commissioned and are operational.

The focus of exploration at Loulo is to continue to explore and discover additional orebodies within the Loulo permit.

Goukoto

The Goukoto mine is located approximately 25km south of Loulo's plant. Following the completion of the feasibility study in 2010, construction of the mine commenced in late 2010.

In January 2011, mining commenced at Goukoto. In June 2011, the Loulo plant started to treat Goukoto ore. 2012 represented the first full year of production for Goukoto. During 2014 a total of 1.7Mt of Goukoto ore at a grade of 5.3g/t was fed to the Loulo plant and 256,957oz were produced at a total cash cost of \$613/oz. We currently anticipate that mining at Goukoto will continue through 2025.

Table of Contents

The Goukoto grade and tonnage model was updated during 2014 to include the additional drilling that was completed in 2014. The underground feasibility study on Goukoto was successfully completed at the end of 2014. Work on the portal in the south of the pit is planned to start in 2018 with access to ore anticipated in 2019.

The focus of exploration at Goukoto is to continue to explore and discover additional orebodies within the Goukoto permit. The viability of an enlarged pit or an underground project beneath the current pit in the Jog Zone is currently being investigated.

Morila

In 1996, we discovered the Morila deposit, which we financed and developed and was our major gold producing asset through 2009. Morila's total production for 2014 was 110,272oz at a cash cost of \$1,143/oz. Consistent with the mine plan, Morila ceased open pit mining in April 2009 and is currently processing lower grade stockpiles. During 2010 a study of the reprocessing of the Morila Tailings Storage Facility (TSF) was completed and in 2011 a feasibility study on the viability of treating the TSF material, marginal ore and mineralized waste stockpiles was completed and approved by the board in January 2012. During 2012, a feasibility study on the viability of the Pit 4S pushback was completed, and approved by the board in January 2013. Closure of the operation was originally scheduled for 2013, but, together with the Pit 4S pushback and the tailings treatment projects, processing of the marginal ore and mineralized waste should extend its life to 2017.

Tongon

The Tongon mine is located within the Nielle exploitation permit in the north of Côte d'Ivoire, approximately 55km south of the border with Mali.

We commenced construction of the Tongon mine at the end of 2008, and commissioned the first stream in the fourth quarter of 2010, with first gold production being recorded. We completed and commissioned the second stream including secondary and tertiary crushing circuit and the sulfide circuit of the processing plant in 2011. Tongon has two main pits, South Zone (SZ) and the smaller North Zone (NZ). In 2014, we produced 227,103oz at a total cash cost of \$872/oz. The Tongon mine has a remaining mine life of 7 years (to 2021) but has the potential to extend this with nearby discoveries and satellite pits.

The focus of exploration at Tongon is to evaluate near-mine targets with a 15km radius and Greenfield programs beyond the near-mine 15km radius.

Kibali

Our interest in the Kibali mine was acquired in 2009 following the acquisition of Moto Goldmines, in conjunction with AngloGold Ashanti, and the further acquisition of a 20% interest from Sokimo on behalf of the joint venture. The Kibali mine is located approximately 560km northeast of the city of Kisangani and 180km west of the Ugandan border town of Arua in the northeast of the DRC. We are managing the development and operation of the Kibali mine.

First gold production at the Kibali mine was recorded in the third quarter of 2013. In 2014, we produced 526,627oz at a total cash cost of \$573/oz.

The Kibali mine is being developed in two phases. Phase 1, which includes the KCD open pit operation and processing plant, the mine infrastructure and the first of three hydropower stations was completed in December 2014. Phase 2 comprises the underground mine development and two additional hydropower stations. A key achievement in 2014 was the commissioning of the sulphide circuit and subsequent ramp up to design production level by the end of 2014. The mine is expected to operate through 2031.

The focus of exploration at Kibali is to evaluate extension to the known deposits, especially KCD where mineralization has been confirmed.

Exploration

We are exploring in four African countries (Mali, Senegal, Côte d'Ivoire and the DRC) with a portfolio of 115 targets on 12,213km² of ground holding, of these 64 are satellite targets located near existing operations while 51 are potential stand-alone operations. We target profitable gold deposits that have the potential to host mineable gold reserves. Our business strategy of organic growth through exploration has been validated by our discovery and development track record, including the Morila mine, Loulou mine, Goukoto mine, Tongon mine and the Kibali mine and the Massawa discovery.

In 2014, the exploration strategy and management system was thoroughly reviewed to ensure that the team was properly equipped and motivated. Consequently, there were a number of changes within the team, including a number of internal promotions. The group's portfolio of mineral rights was expanded through the acquisition of new permits as well as additional joint ventures.

Table of Contents

OWNERSHIP OF MINES AND SUBSIDIARIES

The Morila mine is owned by Morila, which in turn is owned 80% by Morila Limited and 20% by the State of Mali. Morila Limited is jointly owned by us and AngloGold Ashanti and the mine is controlled by a 50:50 joint venture management committee. Responsibility for the day-to-day operations rests with us.

The Loulo mine is owned by a Malian Company, Loulo, which is owned 80% by us and 20% by the State of Mali.

The Goukoto mine is owned by a Malian company, Goukoto, which is owned 80% by us and 20% by the State of Mali.

The Tongon mine is owned by an Ivorian company, Tongon, in which we have an 89% interest, the State of Côte d'Ivoire 10% and 1% is held by a local Ivorian company.

The Kibali mine is controlled by a 50:50 joint venture, between ourselves and AngloGold Ashanti, which holds an effective 90% interest in Kibali. The remaining 10% of the shares are held by SOKIMO, the parastatal mining company of DRC. We thus have an effective 45% interest in the Kibali mine. Our interest in this mine was acquired following the acquisition of Moto Goldmines, in conjunction with AngloGold Ashanti, and the further acquisition of a 20% interest from Sokimo on behalf of the joint venture.

We hold an effective 83.25% interest in the Massawa project. The government of Senegal retains a 10% carried interest in the project, with the balance held by our Senegalese joint venture partner.

GEOLOGY

West Africa is one of the more geologically prospective regions for gold deposits in the world. Lower Proterozoic rocks are known to contain significant gold occurrences and exist in West Africa in abundance. The Birimian greenstone belts, part of the Lower Proterozoic, which are younger than the Archaean greenstones of Canada, Australia and South Africa, contain similar types of ore deposits and are located in Ghana, Côte d'Ivoire, Burkina Faso, Guinea, Mali, Senegal and Niger. Although a significant amount of geological information has been collected by government and quasi-government agencies in West Africa, the region has largely been under-explored by mining and exploration companies using modern day technology. Most of our exploration properties are situated within the

Birimian Formation, a series of Lower Proterozoic volcanic and sedimentary rocks. The West African Birimian sequences host a number of world class gold deposits and producing gold mines.

The Central African gold belts have a long history of gold production, particularly during the colonial era but due to regional instability they have seen little modern exploration. The Kibalian greenstone belts of northeastern DRC are comprised of Archaean Kibalian (Upper and Lower) volcanisedimentary rocks and ironstone-chert horizons metamorphosed to greenschist facies. They are cut by regional-scale north, east, northeast and northwest trending faults and are bounded to the north by the Middle Achaean West Nile granite-gneiss complex and cut to the south by the Upper Congo granitic complex. Our Kibali mine is located within the Moto greenstone.

Our strategy was initiated before the current entry of our competitors into West Africa and we believe that this enabled us to secure promising exploration permits in the countries of Côte d'Ivoire, Mali, Burkina Faso, and Senegal at relatively low entry costs.

ORE RESERVES

Only those reserves which qualify as proven and probable reserves for purposes of the SEC's Industry Guide Number 7 are presented. Pit optimization is carried out at a gold price of \$1,000/oz, except for Morila which is reported at \$1,300/oz. Underground reserves are also based on a gold price of \$1,000/oz.

The Morila, Loulo, Goukoto, Tongon and Massawa open pit ore reserves were calculated by Mr. Shaun Gillespie, an officer of the company and competent person. The Kibali open pit ore reserves were calculated by Mr. Nicholas Coomson, an officer of the company and competent person, while the underground ore reserves were calculated by Mr. Tim Peters, an independent consultant and competent person. The Loulo underground ore reserves were calculated by Mr. Andrew Fox, an independent consultant and competent person. The Goukoto underground ore reserves were calculated by Mr. Tim Peters, an independent consultant and competent person. All reserves were verified and approved by Mr. Rodney Quick, our Group General Manager of Evaluation and Lead Competent Person. Total reserves as of December 31, 2014 amounted to 201Mt at an average grade of 3.6g/t, for 24Moz of gold of which 15Moz are attributable to us.

In calculating proven and probable reserves, current industry standard estimation methods are used. The geological estimates were calculated using classical geostatistical techniques, following geological modeling of the borehole information. The sampling and assaying is done to internationally acceptable standards and routine quality control procedures are in place.

All reserves are based on technical and financial studies. Factors such as grade distribution of the orebody, planned production rates, forecast working costs, dilution and mining recovery factors, geotechnical parameters and

metallurgical factors as well as current forecast gold price are all used to determine a cut-off grade from which a life of mine plan is developed in order to optimize the profitability of the operation.

- 26 -

Table of Contents

The following table summarizes the declared reserves at our mines as of December 31, 2014:

Operation/Project ²	Proven Reserves			Probable Reserves			Total Reserves		
	Tonnes (Mt)	Grade (g/t)	Gold (Moz)	Tonnes (Mt)	Grade (g/t)	Gold (Moz)	Tonnes (Mt)	Grade (g/t)	Gold (Moz)
Morila ¹	0.02	4.0	0.003	13	0.7	0.3	13	0.7	0.3
Loulo ¹	2.2	1.8	0.1	31	4.8	4.7	33	4.6	4.9
Tongon ¹	7.1	2.2	0.5	23	2.4	1.7	30	2.3	2.2
Goukoto ¹	4.4	3.8	0.5	18	4.6	2.6	22	4.4	3.2
Massawa ¹	-	-	-	21	3.1	2.0	21	3.1	2.0
Kibali ¹	5.4	1.8	0.3	78	4.3	11	83	4.1	11
Total	19	2.4	1.5	182	3.8	22	201	3.6	24

¹ Our attributable share of Morila is 40%, Loulo 80%, Goukoto 80%, Tongon 89%, Massawa 83.25% and Kibali 45%. The figures stated above represent the 100% values.

The reporting of ore reserves is in accordance with SEC Industry Guide 7. Open pit reserves are calculated at a weighted average cut off of 1.0g/t and within an \$1,000/oz open pit designs except for Morila which are reported within a \$1,300/oz pit design. Underground reserves are reported at a weighted average cutoff of 2.4g/t, calculated at \$1,000/oz gold price. Dilution and ore loss are incorporated into the calculation of reserves. Addition of individual line items may not sum to sub totals because numbers are reported to the second significant digit.

At Loulo, Goukoto, Kibali and Massawa open pit reserves, a 10% mining dilution at zero grade and an ore loss of 3% has been incorporated into the estimates of reserves and are reported as mill delivered tonnes and head grades. At the Tongon project a dilution of 13% at zero grade and an ore loss of 2% has been modeled for the Southern Zone and 10% dilution and 2% ore loss for the Northern Zone. Kibali underground dilution varies between 1% and 6.7% depending on stope design and ore loss of 3%. Metallurgical recovery factors have not been applied to the reserve figures since these are the estimates of the material to be delivered to the mill. Operating costs, metallurgical recovery, royalties, dilution and ore loss factors are used to determine the cut off grade at which to report ore reserves. The weighted average metallurgical recovery factors used are 60.5% for the Morila mine, 93.5% for the Loulo open pit material and 91.6% for Loulo underground material, 87.5% for the Tongon mine, 91.8% for the Goukoto underground material, 89% for the Massawa open pit material and 87.9% for the Kibali mine.

MINING OPERATIONS**Loulo-Goukoto Mine Complex**

The Loulo and Goukoto mines, known as the Loulo-Goukoto complex, are located in the west of Mali, bordering Senegal, adjacent to the Falémé River. The complex lies within the Kedougou-Kéniéba inlier of Birimian rocks which hosts a number of major gold deposits in Mali, including Gara, Yalea and Goukoto, Sadiola, Segala and Tabakoto as well as Sabodala across the border in Senegal. The Loulo mine officially opened in November 2005 with the approval for an underground feasibility study in the same year and underground mine development started in 2006. Goukoto was discovered in 2009. Open pit mining commenced in January 2011 and first ore was delivered to Loulo plant, under a toll treating agreement in June 2011.

The complex is effectively owned 80% by us and 20% by the State of Mali. In 2010, an application was made to split the Loulo and Goukoto permits, and a separate company was created for Goukoto in December 2010 with the same corporate structure and shareholding as Loulo. A new mining convention, which dictates the fiscal and regulatory environment applicable to the mine, was negotiated with the State of Mali and signed in March 2012. The convention includes an initial two year corporate tax holiday starting from the date of first production, and a further tax holiday, up to a maximum of five years in total, in the event of further investment such as an underground mine. It also includes royalties of 6% of revenues and a 10% priority dividend payment for the State of Mali.

In 2014, gold sales totaled \$799.7 million for the year. Total royalties paid to the state amounted to \$47.9 million and cash operating costs totaled \$376.8 million, resulting in profit from mining activities of \$375.3 million. Goukoto's corporate tax holiday ended in June 2013, which contributed to the group's higher overall tax charge of \$81.9 million in 2014 compared to \$76.7 million in 2013.

Capital expenditure amounted to \$142.6 million at the Loulo-Goukoto complex spent primarily on the underground development, backfill project, the plant upgrade (including four carbon-in-leach (CIL) tanks), the power plant expansion and the completion of the Goukoto infrastructure together with work undertaken on the underground feasibility study.

Table of Contents

Production results for the 12 months ended December 31,	2014	2013
MINING		
Tonnes mined (000)	27,025	33,188

Cash operating costs ¹ (\$/oz)	597	621
Total cash costs ¹ (\$/oz)	672	704
Gold on hand at period end ² (\$000)	9,708	–
Profit from mining activity ¹ (\$000)	375,293	394,633
Gold sales ¹ (\$000)	799,718	808,311

1. Refer to explanation of non-GAAP measures provided in the section “Non-GAAP Measures” above.

2. Gold on hand represents gold in doré at the mines multiplied by the prevailing spot gold price at the end of the period.

LOULO*Mining and Operations*

Gold production at Loulo increased 24% year on year to 382,263oz while the head grade milled increased 9% to 4.9g/t, in line with the plan. The increase in ounces, together with a higher recovery of 90.1%, resulted in a decrease in total cash costs to \$713/oz.

Gold sales amounted to \$475.9 million resulting in profit from mining activities (before interest, tax and depreciation) of \$207.5 million.

Capital expenditure for the year of \$142.6 million included the continued development of the Yalea and Gara underground mines as well as the construction of the Yalea and Gara paste backfill plants. Expenditure also covered the installation of an additional secondary crusher to improve availability of the crushing circuit, and expansion of the power generating station with the addition of two medium speed CM32 generators (7MW), capable of operating on cheaper heavy fuel oil (HFO).

The Yalea and Gara underground mines are now in full production and paste backfill plants at both mines have been commissioned and are operational. During 2014, 16,432 development meters were completed and 2,699kt of ore at 5.3g/t was hoisted to surface. In line with plan, development meters decreased during the course of the year as backfill production increased.

Ventilation in the mines was considerably improved, with two additional primary ventilation shafts at Yalea and one at Gara completed in 2014.

Following a review of the underground mining activities, the mine has taken a decision to take over the mining and development activities that were previously managed by the underground mining contractor. Consequently, the mine is working with the contractor to agree to an orderly change over which is expected to be completed over the course of 2015. The mine is reviewing its operating and capital expenditure estimates to incorporate this change, which will be updated in due course.

Production results for the 12 months ended December 31,	2014	2013

Table of Contents

Randgold owns 80% of Loulo with the State of Mali owning 20%. The State's share is not a free carried interest. Randgold has funded the State portion of the investment in Loulo by way of shareholder loans and therefore controls 100% of the cash flows from Loulo until the shareholder loans are repaid. Randgold consolidates 100% of Loulo and show the non-controlling interest separately.

1. Refer to explanation of non-GAAP measures provided in the section "Non-GAAP Measures" above.
2. Gold on hand represents gold in doré at the mines multiplied by the prevailing spot gold price at the end of the period.

Ore Reserves

at December 31	Category	Tonnes		Grade		Gold		Attributable gold ²	
		(Mt) 2014	(Mt) 2013	(g/t) 2014	(g/t) 2013	(Moz) 2014	(Moz) 2013	(80%) 2014	(80%) 2013
Ore reserves¹									
	Stockpiles	2.2	2.2	1.8	1.9	0.1	0.1	0.1	0.1
	Open pits								
	Proven	—	—	—	—	—	—	—	—
	Probable	4.2	2.9	2.5	2.9	0.3	0.3	0.3	0.2
	Underground								
	Probable	27	29	5.1	5.3	4.4	4.9	3.5	3.9
	TOTAL ORE RESERVES	33	34	4.6	4.9	4.9	5.3	3.9	4.2

Open pit ore reserves are reported at a gold price of \$1,000/oz and an average cut-off of 1.1g/t and include dilution and ore loss factors. Open pit ore reserves were calculated by Mr. Shaun Gillespie, an officer of the company and competent person. Underground ore reserves are reported at a gold price of \$1,000/oz and a cut-off 1. of 2.5g/t for Yalea underground and 2.2g/t for Gara underground, and include dilution and ore loss factors. Underground ore reserves were calculated by Mr. Andrew Fox, an independent consultant and competent person. Addition of individual line items may not sum to sub totals because of numbers being reported to second significant digit.

2. Attributable gold (Moz) refers to the quantity attributable to ourselves based on our 80% interest in Loulo.

Processing Plant and Engineering

A total of 4,396kt (including 1,686kt from Goukoto) at 5.0g/t was treated and milled, compared to 4,463kt at 4.6g/t in 2013.

Overall gold recovery and plant utilization for the year were 90.2% and 91.7% respectively. While recovery increased year on year, it was still slightly below target. Given the capital projects undertaken during the year, including the upgrade of the oxygen plant and the new REA-400 generator installed in the CIL process section, gold recovery is expected to improve further in the year ahead.

The plant feed contribution for the year was 61% from Loulo (28% Gara underground, 33% Yalea underground) and 39% from Goukoto in line with the 60:40 plan to balance the mines' respective reserves.

In the metallurgical plant, the availability of the mills and crusher was 93.2% (2013: 93.9%) and 88.9% (2013: 89.3%) respectively. Mill availability was impacted by the replacement of the secondary drive and motor as well as the installation of the new upgraded cyclone pumps. However, crusher availability was sustained during the year due to the commissioning of another secondary crusher unit at the plant.

The power plant produced a total of 287.7GWh of electricity (2013: 258.3GWh), an 11% increase mainly reflecting the increased underground demand and usage including the paste backfill plants and primary ventilation upgrades.

Power stability and management systems are planned to be implemented over the next two years to manage the increases in load and capacity. Ten medium speed generators can now run on cheaper HFO which together with the lower diesel price towards the end of the year contributed to a significant improvement in power costs during the fourth quarter.

Table of Contents**GOUNKOTO**

Mining at Goukoto started in January 2011, although first ore was fed to the Loulo plant in June 2011 and 2012 represented the first full year of production from the mine. Total material mined during 2014 was 24.2Mt compared to 28.9Mt in 2013.

Production results for the 12 months ended December 31,	2014	2013
MINING		
Tonnes mined (000)	24,206	28,936
Ore tonnes mined (000)	1,841	2,624
MILLING		
Tonnes processed (000)	1,686	2,032
Head grade milled (g/t)	5.3	4.7
Recovery (%)	90.2	88.8
Ounces produced	256,957	271,943
Ounces sold	254,634	274,802
Average price received (\$/oz)	1,272	1,351
Cash operating costs ¹ (\$/oz)	537	541
Total cash costs ¹ (\$/oz)	613	622
Gold on hand at period end ² (\$000)	2,786	–
Profit from mining activity ¹ (\$000)	167,797	200,444
Gold sales ¹ (\$000)	323,857	371,361

Randgold owns 80% of Goukoto with the State of Mali owning 20%. Randgold consolidates 100% of Goukoto and show the non-controlling interest separately.

1. Refer to explanation of non-GAAP measures provided in the section “Non-GAAP Measures” above.

2. Gold on hand represents gold in doré at the mines multiplied by the prevailing spot gold price at the end of the period.

Mining and Operations

Goukoto produced 256,957oz of gold, 6% fewer than the previous year in line with the plan to balance production from Loulo and Goukoto according to their reserves. Tonnes processed decreased during the year but head grade milled increased by 13% to 5.3g/t, in line with the mining plan. Improved recovery at 90.2%, together with the increase in head grade milled, resulted in a decrease in total cash costs to \$613/oz.

Gold sales amounted to \$323.9 million resulting in profit from mining activities (before interest, tax and depreciation) of \$167.8 million. Capital expenditure totaled to \$8.7 million, most of which was related to the underground feasibility study and exploration.

During the year, Goukoto paid a total of \$50.6 million in dividends to its shareholders.

A total of 24.2Mt was mined, including 1.8Mt of ore at an average grade of 5.3g/ t, compared to 28.9Mt including 2.6Mt of ore at 4.7g/t in 2013. The increase in grade reflects the current improved grade profile in the pit. The strip ratio was 12.2 in 2014 compared to 10.0 in 2013, higher than the life of mine (LoM) strip ratio of 10.2. A total of 1,686kt of ore was fed from Goukoto to the Loulo plant at an average head grade of 5.3g/t compared to 2,032kt of ore at 4.7g/t in 2013.

Goukoto Underground Project

The underground feasibility study on Goukoto was completed at the end of the year. Work on the portal in the south of the pit is planned to start in 2018 with access of ore anticipated in 2019. A ramp up in stoping is scheduled for 2020, as the mining in the south of the pit comes to an end. The mining method proposed comprises longhole open stoping with backfill to support a 60 to 70ktpm operation.

Capital expenditure has been minimized by the following:

- Ore handling method to be decline and truck with no underground crushing, alleviating the need for expensive capital excavations and underground engineering;
- Portal position to be located in the south of the pit to ensure a straight decline route to the top of the ore, reducing the requirement for spiral declines;
- Ventilation raised to hole into the open pit with preparation of the holing positions during the pit development; and
- Backfill to be a combination of CAF and cemented rock fill (CRF) by using batching and CAF facilities available at Loulo, which will be transferred to Goukoto.

Table of Contents

An economic assessment on the financial viability of the Goukoto project underground reserve has been carried out based on the parameters summarized below:

- Total ore mined of 4.7Mt containing 0.9Moz of gold at an average grade of 6g/t;
- Average mining costs of \$83.84/ore tonne delivered to the Goukoto RoM pad;
- Average crush and haul costs of \$5.90/t ore;
- Average mill throughput of 657,000t per year to be treated at the Loulo plant over eight years of production;
- Average plant processing costs of \$20.60/ore tonne;
- G&A cost at \$9.30/ore tonne processed over LoM, including engineering services costs; and
- Capital cost of \$137.5 million, including underground development, surface capital, sustaining capital and project management.

A financial model using a \$1,000/oz gold price together with a 30% tax rate and 6% royalty, produced a nine year project with a total after tax cashflow of \$107 million and an internal rate of return of 31%.

Integrating the Goukoto underground mine schedule into that of Loulo-Goukoto should enable the complex to produce over 600,000oz per year until 2024 on current reserves. This excludes further opportunities currently being explored to expand the mineralized material at the three principal orebodies of Yalea, Gara and Goukoto.

Table of Contents

Ore Reserves

at December 31	Category	Tonnes		Grade		Gold		Attributable gold ²

Open pit ore reserves are reported at a gold price of \$1,000/oz and 1.3g/t cut-off and include dilution and ore loss factors. Open pit ore reserves were calculated by Mr. Shaun Gillespie, an officer of the company and competent person. Underground ore reserves are reported at a gold price of \$1,000/oz and 3g/t cut-off and include dilution and ore loss factors. Underground ore reserves were calculated by Mr Tim Peters, an independent consultant and a competent person. Addition of individual line items may not sum to sub totals because of reporting to the second significant digit.

2. Attributable gold (Moz) refers to the quantity attributable to ourselves based on our 80% interest in Goukoto.

*Health, safety and the environment*Loulo

The Lost Time Injury Frequency Rate (LTIFR) decreased from 0.82 per million hours worked in 2013 to 0.62 in 2014. The safety management system was fully implemented as per OHSAS 18001 requirements and recertified during the year.

Counseling and voluntary testing (VCT) of 924 volunteers for HIV was conducted with a positivity rate of 1.08%, 42% lower than in 2013.

The Malaria incidence rate (MIR) of 33.6% was down 1% on the previous year.

An Ebola prevention policy, which includes an implementation plan, was developed and, following the confirmed case of the virus in Mali, further control measures were introduced together with Randgold's other West African operations as part of an industry-wide private initiative in partnership with state and regional health authorities. Mali was officially declared Ebola-free at the beginning of 2015 by the United Nations Mission for Ebola Emergency Response.

The mine retained its environmental management system (EMS) certification for ISO 14001 following the recertification audit during the year, while management reviews and inspections were also undertaken. A water balance action plan was implemented to optimize existing water usage in the circuit.

Completion of the sludge treatment plant at Gara in the first quarter of 2015 will support further water saving initiatives. In terms of biodiversity actions, 3.8ha of land were cleared and 5ha rehabilitated during the year while 6 478 trees were planted in partnership with the Kenieba forestry department.

Goukoto

As in 2013, no LTIs were recorded during the year. Consequently the LTI frequency rate was zero and the mine achieved over 5 million LTI free hours. Compared to the previous year, the MIR decreased by 7% to 51.3%. VCT of 315 volunteers for HIV was conducted resulting in a positivity rate of 0.32%, a 56% decrease from 2013.

An Ebola prevention policy was developed with a response and implementation plan in conjunction with Randgold's other West African operations as part of an industry-wide private initiative in partnership with state and regional health authorities.

The OHSAS 18001 surveillance audit was successfully completed and the mine retained its certification. The mine retained its environmental management system certification to ISO 14001 following the surveillance audit carried out. A management review forum was held where 32 environmental inspections were undertaken to ensure continued improvement.

Table of Contents

Human Resources

Loulo

The operational labor complement at Loulo comprises 945 personnel (excluding persons employed by contractors and temporary laborers) of which 93% are Malians. The increase in nationals and the decrease in expatriate staff are mainly due to the localization program implemented in collaboration with all contractors to increase the number of national workers. The program included the underground mining, capital projects, engineering and procurement departments. Total manpower decreased during 2014 as most capital project activities reached completion.

Industrial relations at mine level were stable during the year. Although both the UNTM and SECNAMI unions called for national strikes in October 2014 and November 2014 respectively, these strikes did not affect any of our mines in Mali.

The personnel representatives received capacity building training in their key company roles, including workplace conflict resolution and social dialogue. During 2014, union representatives from Tongon made a benchmark visit to the Loulo site.

Goukoto

Operational employees decreased to 151, excluding contractors, after a rightsizing exercise was undertaken at Goukoto's opencast mining operation. Similar reductions were also made with respect to contractors. The total mine operational complement is now 1,013, including persons employed by contractors.

Industrial relations were stable at the mine during the course of the year. Training of senior staff and union representatives was undertaken to increase awareness of compulsory health insurance. Union representatives from Tongon made a benchmark visit to the Goukoto site.

Exploration

At Loulo, drilling confirmed strong mineralization at the margins of the Yalea and Gara orebodies with exploration drillholes highlighting significant potential up to 400m from the existing block models as part of a broader conversion program. Greenfields exploration continued to generate targets across the Loulo permit and a gradient array survey was carried out to add a new layer of data for new target generation. Work on a number of targets, including Waraba, Gara South and Yalea Ridge South, resulted in their removal from the resource triangle.

At Goukoto, drilling during 2014 delivered 4.69Mt at 6.0g/t for 910,000 reserve ounces in the underground feasibility study. Drill results around the underground project also highlighted considerable potential for additional underground mineralized material which will be further evaluated in 2015. Exploration across the Goukoto permit continued to generate new models and targets. During the year, work on the targets of Sahnou, Djiguibah and Findogoleh and the follow-up target of Toronto confirmed only limited potential for mineralization and they were removed from the resource triangle.

MORILA

The Morila mine is situated 280km south-east of Bamako, the capital of Mali. The Morila mine is owned by a Malian company, Morila, which in turn is owned 80% by Morila Limited and 20% by the State of Mali. Morila Limited is jointly owned by ourselves and AngloGold Ashanti Limited and the mine is controlled by a 50:50 joint venture management committee. Responsibility for the day-to-day operations rests with us. Under its stewardship the mine was successfully converted from open pit mining to a stockpile treatment operation during 2009.

Closure of operations at Morila was originally scheduled for 2013 but, together with the Pit 4S pushback and the tailings treatment projects, processing of the marginal ore and mineralized waste should extend its life to 2017.

Table of Contents*Operations*

2014 gold production of 110,272oz was 22% down on the prior year due to lower grade ore milled and lower throughput as the mine progressed through remaining stockpiles. The reduction in throughput resulted from the planned change in the milling configuration with the shutdown of the SAG mill in July 2013.

Production results for the 12 months ended December 31,	2014	2013
Mining

Randgold owns 40% of Morila with the State of Mali and joint venture partner owning 20% and 40% respectively. The group equity accounts for its 40% joint venture holding in Morila.

1. Refer to explanation of non-GAAP measures provided in the section “Non-GAAP Measures” above.

2. Gold on hand represents gold in doré at the mines multiplied by the prevailing spot gold price at the end of the period.

Ore Reserves

Marginal stockpiles and open pit material along with the higher grade portion of the TSF are reported in ore reserves and form the bulk of the feed for the current life of mine plan.

at December 31	Category	Tonnes		Grade		Gold		Attributable gold ²	
		(Mt)	(Mt)	(g/t)	(g/t)	(Moz)	(Moz)	40%	40%

Open pit ore reserves are located within the \$1,300/oz pit shell, but reported at \$1,000/oz cut-off grade of 0.9g/t.

1. Stockpile ore reserves are reported at a \$1,000/oz cut-off grade of 0.9g/t. TSF ore reserves are reported at a \$1,000/oz cut-off grade of 0.5g/t. Ore reserves were calculated by Mr. Shaun Gillespie, an officer of the company and competent person.

2. Attributable gold (Moz) refers to the quantity attributable to ourselves based on our 40% interest in the Morila gold mine.

Processing

In 2014, the throughput rate decreased to 402tph from 436tph in 2013, after taking the SAG mill offline in July 2013, as per the business plan. The milling and crushing circuits were reconfigured along with an upgraded three stage crushing plant. The current oxygenation plant production is sustaining the recovery rate despite the lower grade ore processed. The installation of a new oxygen

Table of Contents

unit including the Aachen reactors, designed to improve recovery rates as well as cyanide consumption during the TSF treatment, is expected to be completed early in 2015.

An incinerator has been ordered and will also be installed. This will be used as part of a project to recover gold from stockpiled fine carbon which is planned to start in 2015.

Engineering

Engineering availability for the year was 80.3% for crushing and 94.2% for milling, slightly below plan. The vertical vibration of the ball mill gearbox increased between 10.83mm/s and 12.28mm/s depending on the load. The spare drive was rebuilt and ready for use in November 2014 but a decision was taken to continue to run the mill until the end of the year while managing and monitoring vibrations.

Total power consumption of 101.9GWh was 20% lower than the prior year and generated at an efficiency of 0.2381/kWh, resulting in a total power cost of \$0.303/kWh (2013: \$0.284/kWh).

Pit 4S pushback project

During 2014, the pit 4S pushback mining operation continued with waste stripping and ore mining. Waste was hauled and dumped in both Pit4N and Pit5, the designated in-pit dumping areas, while ore was fed to the plant. Tonnes mined of 18.4Mt was 8% above plan. This included 1.0Mt at 2.26g/t of ore and 17.4Mt of waste material. Ore grade mined was lower than plan due to the low grade gains achieved during the year and the inability to achieve the plan in the final quarter of the year due to flooding of the pit. This, however, will result in more ore being available for mining in the first quarter of 2015.

TSF Project

In 2014, the TSF project model and feasibility study were updated to reflect a selective mining approach. A mining schedule, using a gold price of \$1,000/oz, was produced by Fraser Alexander, the specialist TSF contractors, who envisage that the main mining and processing of the TSF will start in October 2015 and end in the third quarter of 2017.

The plan includes:

- 44.1Mt at 0.24g/t of very low grade material stripped and pumped directly into the pit; and
- 11.9Mt at 0.53g/t (204koz) of higher grade material mined and processed through the plant, with the tailings also being deposited in the pit.

It is envisaged that all the TSF material will ultimately be reclaimed and deposited in the pit, reducing the long term environmental impact and liability. The civil work relating to the decapping and sluicing station, as well as the water tank, was completed in December 2014. A total of 750kt of TSF material at 0.48g/t from the TSF wall B was mined and fed to the plant during 2014.

Agribusiness

As per the mine closure strategy, Morila is continuing to establish a viable agricenter by 2017.

This aims to:

- Provide an alternative income source to former mineworkers and the surrounding communities;
- Contribute towards ensuring food security in the community and the country;
- Promote local economic development; and
- Improve the community's economic welfare.

The poultry project comprises 7,000 laying chickens in a facility which has the capacity to house 10,000 chickens. Six new fish ponds have been constructed to breed tilapia in addition to the seven existing tilapia ponds. One test floating cage has been installed in the Morila fresh water dam and an additional 11 floating cages are planned.

This focus is on:

- Expanding the current poultry project;

- Expanding the current fish project;

- 35 -

Table of Contents

- Expanding the current mango project;
- Establishing a honey producing unit with a partner;
- Establishing a juice/pulp producing unit with a partner;
- Investigating the possibility of ecotourism with a partner;
- Establishing greenhouse tomato production with a partner; and
- Improving community food production.

Health, safety and the environment

During the year the mine was recertified in accordance with OHSAS 18001 requirements. Three LTIs were recorded and the LTIFR was 1.11 compared to 0.49 in 2013. The MIR increased slightly during the year to 26.25% compared to 23.49% in the prior year, but was still well contained. Morila health workers joined other Randgold operations in managing the Ebola virus threat during the latter part of the year.

Morila's environmental management system successfully completed its ISO 14001 annual surveillance assessment. The conformity assessment found that the mine's EMS is being implemented effectively and that there is a clear and extensive evidence of continual improvement in the mine's pollution prevention and environment management programs.

The mine closure plan was updated in November 2014 to meet the requirements of the government and the communities and to prevent or minimize any adverse long term environmental impact while creating a self-sustaining natural ecosystem.

Human resources

Total manpower recorded at the end of the year was 1,280 (including 978 persons employed by contractors) of which 99% are Malian. The growth in manpower from year to year relates primarily to the mining contractor and the pit pushback project. During the year the industrial relations climate was stable. Several training and employee capacity building activities took place.

Total	18	1,262	1,280	21	1,147	1,168

Tongon

The Tongon mine is located within the Nielle exploration permit in the north of Côte d'Ivoire, 55km south of the border with Mali. The Tongon mine is owned by an Ivorian company, Tongon, of which Randgold has an 89% interest, the government of Côte d'Ivoire 10% and 1% is held by a local company. Tongon is an open pit mining operation and employs the four standard mining practices of drill, blast, load and haul.

Operations

The mine produced 227,103oz of gold in 2014, 3% less than the prior year as a result of the lower head grade milled, despite a 3% improvement in mill throughput and a 1% improvement in recovery. The mine successfully completed the hydrocone crushing circuit upgrade in the fourth quarter following repeated breakdowns due to mechanical deficiencies of the vibrocone crushers.

The mine also continued to engineer out key process deficiencies and improve operator skills and plant maintenance. The electricity grid supply issues which challenged the mine in previous years were resolved, resulting in a grid to generated power ratio of 97:3 in the fourth quarter. By year end the mine had completed Phase 1 of the flotation circuit upgrade, designed to increase recoveries into the upper 80s percentile, and is forecasting completion of the full project by the end of the first quarter of 2015.

Gold sales amounted to \$287.0 million at a total cash cost of \$872/oz, resulting in a profit from mining activity (before interest, tax and depreciation) of \$89.0 million.

Capital expenditure for the year totaled \$19.2 million, which related primarily to the crusher and flotation circuit upgrades.

Table of Contents

Mining and production

Mining continued in the SZ pit where development was based mainly on hard ore mining to supply the plant. As in 2014, mining activities for 2015 will focus primarily on the SZ pit although mining of both ore and waste in the NZ pit will start to ramp up from the second quarter of 2015. The LoM schedule is broadly categorized as follows:

- Mining in SZ pit, which started in 2010, will continue to 2019 to the final pit bottom;

Mining in the NZ pit, started in 2011, will start ramping up in the second quarter of 2015 - consisting mainly of

- waste stripping. Mining will, however, be suspended during the rainy season and start again in the fourth quarter of 2015 with an increasing proportion of ore being mined. Ore mining will continue to 2020; and

- SZ and NZ satellite pits have been introduced into the plan and the SZ oxide pit will be mined from 2016 and the NZ east pit from 2019.

Total material mined in 2014 at 26.1Mt, was 4% below the prior year. Total ore mined at 3,566kt was 13% below the previous year, mainly as a result of difficulties experienced in mining multiple thin orebody sections, predominantly found in the SZ pit, and controlling dilution. The strip ratio for the year of 6.3 was up 11% on the prior year, in line with the LoM plan. SZ pit mining activity centered on hard rock mining (ore and waste) with an oxide/saprolite pushback which started in the second quarter of 2014 in the northern side of the pit.

Mining production improved in the second quarter, reducing in the rainy season in the third quarter as per plan and picking up once more in the fourth quarter. Groundwater and surface water management received continued attention and was well controlled during the year. The SZ pit 260RL stage pumping installation, including pipes and tanks, was completed in the third quarter of 2014.

Preparation for the 2015 rainy season will start in the first quarter of 2015, with deep sumps being developed in the northern and southern parts of the SZ pit. In the NZ pit, eight borehole pumps were installed in the perimeter of the pit together with an upgrade of the in-pit dewatering system. Dewatering forms an integral part of the mining strategy in Tongon as the pit lies in the catchment area of the old river system and is downstream of the water storage dam.

Mining schedules and plans are developed with a view to ensuring two low spots (sumps) in the pit at any time in the mining cycle, to allow mining to take place in dry ground while the water is pumped away in the sumps.

Production results for the 12 months ended December 31, 2014 2013

Gold sales ¹ (\$000)	287,026	329,448

Randgold owns 89% of Tongon with the State of Côte d'Ivoire and outside shareholders owning 10% and 1% respectively. Randgold funded all the investments in Tongon by way of shareholder loans and therefore control 100% of the cash flows from Tongon until the shareholder loans are repaid. Randgold consolidates 100% of Tongon and show the non-controlling interest separately.

1. Refer to explanation of non-GAAP measures provided in the section "Non-GAAP Measures" above.

2. Gold on hand represents gold in doré at the mines multiplied by the prevailing spot gold price at the end of the period.

Open pit ore reserves are reported at a gold price of \$1,000/oz and 0.8g/t cut-off and include dilution and ore loss factors. Open pit ore reserves were calculated by Mr. Shaun Gillespie, an officer of the Company and competent person. Addition of individual line items may not sum to sub totals because of reporting to second significant digit. 2. Attributable gold (Moz) refers to the quantity attributable to ourselves based on our 89% interest in Tongon.

Processing

Year on year mill availability and throughput increased by 1% and 3% respectively with 3,984kt of fresh sulphide ore being treated in 2014.

The change-out of the old hydrocone crushers to vibrocone crushers was completed in the first quarter of 2014 as planned. Although the vibrocone crushers delivered an improvement in crusher throughput and fineness of crushed product, this improvement could not be sustained due to repeated mechanical failures. Consequently, it was agreed with the supplier to replace the vibrocone crushers with upgraded hydrocone crushers within a new circuit configuration, which was completed in the fourth quarter of 2014.

The mine is currently optimizing the new crushing circuit installation and is expecting to ramp up mill tonnage throughput to 4.3mtpa in 2015 with an eventual target of 4.8mtpa. Year on year, gold recovery improved by 1% to 78%, and by the fourth quarter of 2014, had improved to 80%, mainly as a result of improving and sustaining the existing flash flotation concentrate mass pull and its treatment, while sustaining previous improvements and gains

made in operating parameters and management of the process plant. Despite the increase in mill throughput and recovery, gold production decreased by 3% year on year to 227,103oz due to the lower head grade milled.

The strategy for increasing gold production is to improve mill throughput and gold recovery. The first 2% gain in recovery has been achieved by optimizing most aspects of the existing recovery circuit. The next recovery gain, to the targeted upper 80s percentile, requires the installation of a rougher flotation plant with upgraded ultrafine grinding facilities.

Gold and arsenopyrite deportment studies of the Tongon plant feed have confirmed that a rougher flotation circuit together with ultrafine grinding facilities will effectively recover arsenopyrite associated gold thus increasing overall gold recovery to the original feasibility specifications.

Phase 1 of the new flotation circuit was completed in the fourth quarter of 2014 and consists of one rougher cell, dewatering cyclones and related pumping and control facilities. The final phase of the flotation installation and additional ultrafine grinding capacity is scheduled for completion by the end of the first quarter of 2015.

Engineering and power supply

Overall mill availability for 2014 was 91.4%, an improvement of 1% on 2013 and 14% on 2012.

Continued engineering improvements and uplifting of local workforce skills contributed positively to the overall increase in engineering mechanical availability and subsequent overall mill availability improvement. This positive trend in plant availability was attributable to more efficient planned maintenance, less controllable downtime stemming from mechanical failures in the milling circuit and improved power management.

Improved maintenance of key recovery related equipment, such as regeneration kilns, acid wash pumps and the elution circuit, also contributed to the overall recovery improvement. Power supply management and stability improved during 2014, and in the fourth quarter the targeted 97:3 ratio of grid and generated power was achieved, with power supply costs reaching an all-time low.

Table of Contents

Regarding the national grid supply, critical repairs and maintenance work was carried out at the AZITO power plant in the second quarter and the third quarter of 2014, following the failure of a turbine and transformer which resulted in a national grid reduction of 300MW. The mainline transformer situated at Man was also replaced. Lower grid availability was absorbed by increased usage of generated power.

The close cooperation between the CIE national supply authority and Tongon mine was enhanced during the year to ensure effective utilization and smooth synchronization during extended power outage periods and to improve power stability and reduce the effect of outages. The completion of the 225kV ringline passing from Leboa to Ferkessedougou is a high priority and the replacement of the Leboa transformer and powerline is scheduled for completion by the end of 2015.

The power generation plant achieved overall mechanical and electrical availability of 96% in 2014. Power demand consumption from the grid increased from 18.7MW to an average 21.8MW for the year. Total mine consumption increased in line with the raised operational availability and utilization and an increase in the number of process units demanding power as new projects were installed during the year. The cost of power at \$0.099/kWh was down by 24% on 2013 and by 48% on 2012.

Health, safety and the environment

Continued focus on effective occupational health and safety management paid dividends and enabled the mine to achieve 401 days without a LTI, equivalent to 5,030,453 LTI free hours. Attention to safety remains a priority and the workforce continues to conduct risk assessments prior to starting each task. The LTIFR decreased from 0.45 in December 2013 to nil in December 2014. Tongon mine maintained its OHSAS 18001 accreditation.

The mine introduced and set up an Ebola awareness and preparedness campaign together with Randgold's other West African operations as part of an industry-wide private initiative in partnership with state and regional health authorities.

The mine continued with the implementation and maintenance of malaria control programs which resulted in the number of malaria cases reducing 17% year on year and a consequent decrease in the MIR by 16% from 2013.

Tongon mine maintained its ISO 14001 accreditation. One Class 1 environmental incident occurred two weeks before year end when a ruptured tailings pipeline caused process water to leave the mine perimeter along a stream causeway. The mine responded effectively and the environmental impact was assessed as negligible to zero.

Human resources

The operational labor complement for Tongon comprises 449 personnel, excluding persons employed by contractors and temporary laborers. Of this, 95% are Ivoirians. All recruitment has been based on the company's policy of giving preference to nationals of its host countries. Locally the policy of spreading recruitment between the villages, according to agreed percentages, has been applied. To date, 75% of the operational labor is from local villages. This same recruitment approach has been applied to all operational contractors.

Open and continuous engagement between Tongon's workforce, union and management ensured a constructive work environment was maintained and a Mine Closure Fund convention was concluded and approved.

As part of Tongon's succession plan, training workshops were held for 249 workers. These consisted mainly of engineering employees identified for promotion to higher levels of responsibility and in some cases to replace expatriates in the medium term.

Exploration

Exploration in the Nielle permit comprised a drill program below the \$1,000/oz pit of the SZ pit with six priority holes totaling 1,007m drilled to validate the conceptual model. Wider zones of mineralization with higher grades are being targeted at the intersections between flat and steeper structures. The new drilling focused on testing areas where the pit is highly flexible to changes in depth at gold prices between \$1,000/oz and \$1,300/oz.

This drilling has the potential to add to the current pit reserves and extend the LoM as indicated by the results of the most recent drill intersections of 8.20m at 3.20g/t and 12.90m at 3.03g/t, including 10.20m at 3.72g/t obtained in the northern portion of the pit.

Table of Contents

Infill RC drilling in near mine targets provided a better understanding of the continuity and the geometry of the mineralized zones at Sekala and Seydou North with indications of favorable metallurgical recoveries. Greenfields work focused on the 15km Bladonon target in a belt parallel corridor in the southwest of the Nielle permit which has not received much attention in the past but is an area of belt margin structures and elevated soil anomalism.

Kibali

The Kibali mine is a gold development property which covers an area of 1,836km² on the Moto Goldfields in the north east of the DRC. It is located some 560km north east of the city of Kisangani and 150km west of the Ugandan border town of Arua. Kibali is a joint venture between Randgold (45%), AngloGold Ashanti (45%) and a Congolese parastatal, SOKIMO (10%).

The mine is being operated by Randgold. The mine comprises an integrated open pit and underground operation with the core capital program scheduled to run until early 2016. It is planned that the mine will ultimately be supplied by four hydropower stations supported by a thermal power station for low rainfall periods and back-up.

Open pit mining started in July 2012 and commissioning of the oxide circuit began in the third quarter of 2013. Kibali poured its first gold in September 2013, ahead of plan, and started commercial production in the fourth quarter of 2013.

Operations

The Kibali mine is being developed in two phases. Phase 1, which includes the KCD open pit operation and processing plant, the mine infrastructure (including a 36 unit high speed thermal power station) and the first of three hydropower stations, was completed in December 2014.

Phase 2 comprises the underground mine development and two additional hydropower stations. The mine is expected to produce an average of 600,000oz of gold per annum over the first 12 years of its life, which currently extends to 2031.

Open pit mining started in July 2012 and commissioning of the oxide circuit began in the third quarter of 2013. Kibali poured its first gold in September 2013, ahead of plan, and started commercial production in the fourth quarter of

2013. Commissioning of the sulphide circuit started at the end of the first quarter of 2014 and, by year end, the mine had ramped up to design levels.

Kibali produced 526,627oz at a total cash cost of \$573/oz in 2014. Gold sales amounted to \$650.3 million resulting in a profit from mining activity (before interest, tax and depreciation) of \$354.2 million.

The capital estimate for Phases 1 and 2 of the project was updated at the end of the second quarter of the year and is currently estimated at \$1.83 billion, excluding mining preproduction expenses. In 2014, capital expenditure totaled \$386.5 million.

Open pit mining

The total volume of rock of 2.6 million BCMs which was mined from the open pit exceeded the plan, and ore tonnes of 5.6Mt mined were in line with plan.

At the end of the year, tonnes stockpiled totaled 370,000t at 3.1g/t of medium and high grade material and 3.35Mt at 1.2g/t of low grade ore.

Mofu, the first satellite open pit, was successfully established during the year and included the construction of a haul road which will also service the Mengu Hill open pit, where mining is scheduled to begin in 2015. The dewatering of Mengu Hill was initiated in preparation for mining.

Underground mining

During 2014, 90,839t of ore was mined from underground. Although this was mostly from development, stoping started in December 2014 in the C5630mL_XC 2 stope as per the mine schedule. A total of 8,103t of ore was trammed from the stope to the ROM pad with 10,583t of blasted stocks underground by December 2014. Stopping is planned to ramp up during 2015 and is scheduled to produce 700,000t of ore for the year.

Processing

A key achievement in 2014 was the commissioning of the sulphide circuit and subsequent ramp up to design production levels by the end of the year, including the rougher flotation, ultra-fine grind (UFG) and pumpcell carbon-in-pulp (CIP) circuits.

Flash flotation and gravity recovery units were also commissioned during the year. The plant treated 5.6Mt, comprising both oxide and sulphide material, at an average grade of 3.7g/t. Although the average recovery for the year was 79%, optimization of the processing facility in the latter half of the year resulted in a steady improvement in performance, with December averaging 86%.

- 40 -

Table of Contents

Engineering and power supply

Due to improvements in planned maintenance, plant availability increased throughout the year, reaching 90% in December.

A major milestone for Kibali during 2014 was the commissioning of the Nzoro II hydropower station which consists of four turbines with a capacity of 22MW. After all four turbines were commissioned, a breaker failure resulted in only three turbines operating in the last quarter with a steady supply of 16.8MW and a 55/45% split between hydropower and thermal power.

Further optimization of the hydropower and synchronization of power produced from Nzoro II with the diesel power plant via a power management system (PMS) is expected to increase the contribution from hydropower in 2015 and beyond.

Before Nzoro 2 was successfully commissioned, the cost of power was \$0.46/kWh reducing to \$0.21/kWh after its commissioning. We expect a further reduction in power cost in 2015 due to lower fuel prices and better synchronization between the hydro and thermal power stations.

Once construction of the planned hydropower stations is completed and they are running as intended, the cost is expected to reduce to between \$0.10/kWh and \$0.12/kWh.

Construction and underground mine development

The project team kept the construction program on schedule during the year, completing the metallurgical facility, all associated infrastructure and the Nzoro II hydropower station. Construction of Ambarau, the second 11MW hydropower station, started as well as Phase 2 of the Concentrate Tailings Storage Facility (CTSf), both of which remain on schedule for completion in 2015.

Construction highlights achieved during 2014 include:

- Sulphide metallurgical circuit including full flotation, UFG and pumpcells commissioned;
 - All metallurgical plant contractors demobilized;
 - CTSF Phase 2 initiated;
 - Nzero II hydropower station commissioned;
 - Ambarau hydropower station construction started;
 - Mengu Hill open pit haul road completed;
 - First phase of the junior village completed; and
- Main project relocation action plan (RAP) completed and infrastructure handed over to the community.

Vertical shaft system

Under the leadership of Randgold's team, the main contractor continued to sink ahead of schedule, ending the year at 720 vertical meters, 40m from the bottom of the shaft. Lateral development for the production and crusher levels also progressed ahead of target, resulting in the shaft being ahead of schedule at year end.

Decline development

The mining team consistently achieved decline and underground development targets during 2014 and at a better advance rate than planned in the feasibility. An average of 300m/month per jumbo was reached in development with the decline contractor now ramped up to 900m/month.

To date, a total of 12.1km has been developed, including 8km in 2014. The underground pump chambers and ventilation required for the current production levels were also all completed.

- Open pit ore reserves are reported at a gold price of \$1,000/oz and an average cut-off of 0.9g/t cut-off and include dilution and ore loss factors. Open pit ore reserves were calculated by Mr. Nicholas Coomson, an officer of the company and competent person. Underground ore reserves were reported at a gold price of \$1,000/oz and a cut-off of 2.4g/t and include dilution and ore loss factors. Underground ore reserves are calculated by Mr. Tim Peters, an independent consultant and competent person. Addition of individual line items may not sum to sub totals because of reporting to two significant digits.
1. Attributable gold (Moz) refers to the quantity attributable to ourselves based on our 45% interest in the Kibali gold mine.
 - 2.

Health, safety and environment

The LTIFR continued to decrease year on year from 0.59 in 2013 to 0.51 in 2014, following sustained efforts to increase safety awareness.

Although the labor complement decreased substantially with the completion of most of the construction, there were still around 5,000 people working at Kibali during the year, with 11.7 million man hours worked, making the continued improvement in the safety record, from the already low levels of 2013, commendable.

Unfortunately, there was one fatality in the vertical shaft development. While blowing over in the shaft bottom, a contractor employee who was removing rocks from the footwall was struck on the head by a stage-jack extension that fell down the shaft from an unknown position.

The Environmental and Social Impact Assessment (ESIA) was updated during 2014 to include the additional satellite pits and scope changes to the infrastructure according to IFC performance standards. In line with DRC legislation, the environmental management plan (EMP) successfully underwent an annual independent audit.

Kibali's environmental management was enhanced through the takeover of the operational team in 2014, resulting in a 16% reduction in reported environmental incidents. Formal awareness sessions on site, inspections and environmental training and inductions contributed to the better performance.

Biodiversity management was also incorporated into the site EMPs during the year, with over 1,450 trees successfully transplanted in the eco-center and camps. Fauna conservation was also enforced following the completion of the exclusion zone fence.

Kibali donated over \$250,000, as well as JetA-1 fuel, tents and containers, to African Parks as part of a biodiversity offset strategy and an agreement to help combat poaching in the Garamba National Park. This also included the funding of elephant collaring and pilots for aerial counts and patrols.

Table of Contents

Kibali is aiming to achieve ISO 14001 certification by the end of 2015.

Human resources

With the majority of construction activities ending during the year and contractors demobilizing, there was a corresponding decrease in labor with 4,744 contractor and permanent employees remaining at year end. This reduction will continue, eventually stabilizing during 2015.

The employee ratios are in line with Randgold's policy of recruitment prioritization, sourcing primarily from local villages, then regionally followed by nationally and lastly looking for candidates outside the country. 84% of employees are Congolese nationals and the intention is to continue localizing the labor force during 2015.

As construction and commissioning of the processing and power generation facilities were completed, the mines' operational team was established and key positions were filled during the year. These included the plant, engineering, supply chain and financial managers as well as a general manager.

Constructive labor relations were maintained directly and with the union, without any industrial action taking place during 2014. Agreement was reached on the downsizing of the construction workforce which, in many instances, included the transfer of labor between contractors.

Exploration

Exploration continued to focus on extensions to the known deposits, especially KCD, where mineralization has been confirmed down plunge of the current orebody model, while the up plunge continuity of the 5,000 lode into Durba Hill offers additional open pit ore.

On a regional level, the greenfields exploration focus was shifted to the KZ structure which extends over 35km and hosts multiple orebodies. It is a line of anomalous gold in soil values which are coincident in places with interpreted district scale structures that may form part of a larger regional scale feature. The feature runs from Kalimva in the north, through Mengu Hill, Pakaka, KCD, Kibali South, Aindi Watsa and onto Zambula in the south.

Significant mineralization is located along or near to this feature and more than 50% of the strike length has no deeper data further than 50m below surface.

EXPLORATION REVIEW

For projects to meet Randgold's development and investment criteria, they need to have the potential for 3 million minable ounces and offer an internal rate of return (IRR) of 20% at a long term gold price of \$1,000/oz. Although no new discoveries were made during the past year, the team was able to replace the ounces mined through ongoing brownfields exploration which included the completion of the underground feasibility study at Goukoto.

Over the past year, the exploration strategy and management structure was thoroughly reviewed to ensure the team was properly equipped and motivated. Consequently, there were a number of changes within the team, including a number of internal promotions. As part of this process, the targets contained in the resource triangle were reduced from 160 to 115. The group's portfolio of mineral rights was expanded through the acquisition of new permits as well as additional joint ventures. The current portfolio covers an area of 12,213km² over the continent's most prospective gold belts with a further 2,796km² under application.

Mali

Loulo

Exploration work at Loulo focused on the evaluation of identified targets within the permit, defining drill programs to generate reserves and to identify new brownfields opportunities at both Gara and Yalea.

Work on the Gara South, Yalea Ridge South, Loulo 4, Samaba and Sansamba West targets during the year determined that they have little potential to add significant ounces to the project with only limited surface exposure to mineralization and they were removed from the resource triangle.

Waraba

A new target named Waraba returned encouraging early results from shear hosted mineralization over a 400m strike in an area of artisanal mining in the north of the Loulo permit where 43 samples returned an average gold grade of 2.97g/t from a narrow north-south striking structure hosted in quartzite and brecciated hematitic greywacke to the West of the Baboto target.

Three follow-up trenches were excavated and returned results of: WTR01 – 3.85m at 2g/t including 1.10m at 3.24g/t; WTR02 – 3.40m at 1.65g/t including 1.30m at 3.93g/t; and WTR03 – 3.90m at 2.15g/t including 1.60m at 4.83g/t. While narrow, these intersections were thought to be significant because they occur at a structural discontinuity which has focused fluid flow. This structure was tested with a diamond drillhole which intersected four zones of mineralization totaling 30m downhole true width around the target structure. Of note included the results from WDH001 which returned 6.0m at 5.07g/t from 153m and 15.8m at 1.43g/t from 189m in a 75m wide zone of variably sheared, carbonate-chlorite-silica altered greyswacke, heterolithic breccia and limestone.

Further trenching along the +2km strike length of the Waraba shear zone was then executed with the aim of extending the target along strike. However, results from the program were weak, with only one trench out of 11 returning a mineralized intersection with a result of 5.2m at 2.38g/t.

The work at Waraba defined a narrow system of 4.7m true width over a strike of 1.2km with limited potential of any economic mineralized material at surface and the main target has therefore been removed from the resource triangle. However, the structure does have the potential to dilate at depth and will be included in an assessment of deep, conceptual targets around the Loulo deposits.

New targets

After many years of exploration along several key structures on the Loulo permit, a 380 line km induced polarization (IP) geophysical survey was completed to provide a new data layer across the most prospective and most underexplored parts of the permit where only limited surface outcrop is available and transported soils are thought to partially mask underlying mineralization.

The integration of this new layer of data with updated mapping data and other layers produced a new geological interpretation and identified 12 preliminary targets. As part of this program, a district-wide initiative to improve the lithological and structural understanding of the Loulo area was progressed. Fieldwork confirmed a number of existing observations and, more significantly, defined the eastern margin of the coarser shelf sediments in a conglomeratic unit to the immediate east of Baboto.

Field mapping showed that the pervasive north-northeast trending lineaments highlighted by the geophysics represent faults, shears and intrusives rather than bedding, and also that the spatial distribution of sinistral verging ‘Gara Style’ folds are more widespread than previously recognized. This has regional implications for locating blind fold related mineralization or areas where high grades are developed as fold trains intersecting major structural trends.

Following the testing of the Waraba target, the exploration team has now moved onto the Yalea North target area which features several targets which lie under transported material along strike to the North of the Yalea and P125 deposits.

- 44 -

Table of Contents

Underground exploration

A total of 282 DDH for 50,325m was drilled into the Gara and Yalea ore bodies during the year with various aims. Firstly, the establishment of advanced grade control coverage 12 months ahead of the rolling mine plan with infill grade control coverage six months ahead of the plan.

Secondly, to either help convert or identify areas of mineable reserves in order to support a 10 year mine plan. Drilling also targeted to better delineate profitable ore.

As the mining of high grade ounces continues from underground at Loulo, it is critical that the exploration team continues to replace this depletion through the identification and conversion of new mineralized material to reserves. In addition to the program noted above, exploration also tested models projected out to 400m beyond the limits of the existing block models at both deposits with encouraging results.

At Yalea, 127 holes for 22,261m were drilled comprising 113 holes (14,749m) for grade control infill drilling and 12 holes (7,512m) for conversion drilling. Of these 12 holes, four targeted the potential for conversion and eight were conversion infill holes. The infill drilling generally reported higher grades and widths than the 2013 model and allowed the weathering surfaces to be updated.

The 4 conversion holes were drilled to test the geological potential of the Yalea zone at depth. Results confirmed the modeled grade but a 10% decrease in width is thought to be due to the steepening of the Yalea Shear Zone where it passes into a different host lithology, the argillaceous quartzite, at depth. Hole YADH16 returned 7.00m at 5.22g/t from 657m including 2m at 16.75g/t, beyond the limits of the current block model and indicates that the system is open with scope for further high grade. The style of mineralization at this depth is very different to the rest of the deposit with virtually no sulphides seen in the main altered zone but with fine particles of visible gold occurring in very thin chloritic shears. Other results from the central area include: YaDH11 – 6.30m at 1.99g/t; and YaDH13 – 41m at 3.59g/t.

In Yalea South, there are narrow, very high grade zones where the shear is seen to anastomose around resistant albitized blocks. The high grade material, which looks similar to the Purple Patch material with strong sulphides and chlorite overprinting strongly albitized breccias, may have the potential to be mined selectively underground. Additionally, the infill drilling in the south of the deposit has shown the depth of weathering to be deeper than previously modelled. Results include: YaDH06 – 42.10m at 8.16g/t; YaDH09 – 32.75m at 5.66g/t; and YaDH05 – 29.49m at 8.71g/t. The immediate hanging wall in this area is consistently a limestone unit which is believed to have acted as a seal to the mineralizing fluids.

Our geological understanding of the Yalea orebody has advanced significantly this year with the definition of three styles of mineralization which overprint one another throughout the orebody and explain the sharp contacts to the mineralized domains without any significant structural control to their boundaries. Substantial thickness variations have been observed within the Purple Patch at Yalea as the mineralizing system moves from the rheologically contrasting greywacke/argillaceous quartzite contact which permits the development of a strong shear, into the finer grained argillaceous quartzite unit where shearing is less focused and more diffuse over a larger rock volume. This results in a larger package of sub-economic mineralization and a thinner zone of economic grade.

Exploration continues to focus on a number of targets around the Yalea deposit based on the plunging intersections of structures believed to control the high grade within the deposit. Hole YDH270 was drilled to test the plunging intersection of two ore controlling structures and returned 11.05m at 2.02g/t from 1,106.05m, including 3.18m at 4.81g/t from 1,106.05m, 400m south of the deposit. This result points to considerable untested potential around the deposit with several areas highlighted for further testing in 2015.

At Gara, 155 diamond core boreholes were drilled (28,064m) during the year comprising 125 holes (12,900m) for grade control (GC) drilling and 30 holes (15,164m) for infill or conversion drilling. A total of 9 holes (4,018m) were drilled in the southern area between -400 and -500m level to upgrade the status. These holes reduced the average width of the orebody by about 35% compared to the model but increased the grade by 50% with an average intersection of 6.89m at 5.46g/t. High grade mineralization is associated with the hinge of a south plunging anticline which remains open down plunge and presents further opportunity for reserve growth. Individual drill results include: LOCP161 – 4.7m at 7.71g/t from 332.7m; LOCP162 – 4.1m at 22.00g/t from 473.10m; LOCP165 – 4.65m at 17.83g/t from 465.85m; LOCP173 – 9.00m at 6.16g/t; and LOCP167 – 6.25m at 6.01g/t.

The infill drilling was undertaken to increase the confidence level in the indicated zone. Overall the intersections returned a lower grade and width compared to the block model. However, holes along the base of the deposit confirmed that the system is open, strongly altered and intensely mineralized, highlighting potential for step-out drilling around the block model to incrementally add to mineralized material. Results from this area this quarter include: LOCP176 – 8.5m at 6.74g/t from 370.65m; LOCP177 – 4.55m at 5.63g/t from 370.65m; and LOCP175 – 16.2m at 5.96g/t from 180.2m.

Additionally, exploration targeting to the south of Gara predicts further high grade along the hinges of tight south-plunging s-type folds, especially where they cross through the axis of a sub-horizontal warp in the Gara orebody. The wavelength of s-type folds within the orebody suggests that the target area would be 300-500m south of the existing model. This model was tested with

Table of Contents

LOCP187 which returned an intercept of 2.93m at 7.44g/t from 544.60m 400m south of the existing block model and confirmed strong mineralization and alteration is open along the system. This, when combined with the strong results at depth at Gara, confirms an exciting potential for further growth.

Goukoto

The main highlight of the work at Goukoto this year has been the completion of the underground feasibility study in the Jog Zone (JZ). This project targeted the high grade mineralization in the MZ2 and MZ3 zones beneath the pit, a large portion of which was drilled out in previous years. As part of the feasibility program, work focused on improving the understanding of the controls on mineralization in the JZ, infill drilling and step out drilling in MZ3 where high grade rods of mineralization plunge to the north of the current underground project for a total of over 12,000m of core drilled during the year. The conclusion of this work was the delivery of a reserve of 4.69Mt at 6.00g/t for 910,000 reserve ounces with good potential to increase this through further exploration drilling.

The high grade plunge in the Goukoto deposit is thought to be controlled by the intersection of the east-dipping hangingwall shear and steeper west-dipping footwall structures which exhibit different alteration suites and may represent zones of fluid mixing and gold precipitation. Drilling shows that the highest grades are either related to carbonate, silica/albite and hematite alteration in the hangingwall, or in a ferruginous, chlorite rich, footwall shear. Highlights of the drilling program targeting the high grade mineralization in the MZ3 zone this year include infill hole GKDH418 which returned 14.5m at 31.59g/t where the block model was predicting a grade of 18g/t, GKDH414 drilled 200m down plunge from 418m which intersected 23.65m at 6.45g/t and GKDH412 drilled a further 300m down plunge which intersected 13.65m at 5.34g/t.

Work on the extensions of the Goukoto orebody was completed this year, with holes testing and eliminating deep targets both in the footwall and down plunge to the south of the deposit. Work continued to define MZ4 and explore its relationship with P64 and has confirmed it to be a relatively small lens of mineralization in the footwall of MZ3. This zone of mineralization is interpreted to be the continuation of the left-stepping Goukoto system to the north-northwest which continues towards and now incorporates the old P64 target.

In addition to the JZ underground project, there is also high grade mineralization located beneath the southern MZ1 pit where, similarly to the JZ, the high grade mineralization is controlled by the north-plunging intersection of west dipping footwall shears with the main east dipping orebody. A number of holes have intersected strong mineralization in the target including: GKDH200 – 11.8m at 6.05g/t; GKDH205 – 17.2m at 11.04g/t; and GKDH218 – 40.3m at 3.03g/t.

P64 is an old exploration target immediately to the north west of the Goukoto deposit where a short strike length of high grade mineralization was discovered over 10 years ago. This year a review of all the data for P64 was completed along with further trenching which led to the identification of new controls to the mineralization and the updated model was then further tested by infill drilling in the fourth quarter. The existing model at P64 interpreted the high grade mineralization to be hosted in the eastern limb and south plunging hinge zone of a synformal fold in tourmaline altered greywackes. The new structural model at P64 shows that mineralization is controlled by the intersection of north-south and northeast trending structures, similar to that observed in Goukoto Pit at MZ1 and MZ3. Implications of this new model for exploration are that the high grade northeast trending mineralization at P64 is open down plunge, rather than having a depth extent that is limited by folding. Additionally, intersections between north-south and northeast striking structures can be targeted for follow-up work, particularly in the Goukoto North area between P64 and Toronto. A model of north-south and northeast trending structures matches the general pattern of soil anomalism in this area, and preliminary target areas have been identified for further work.

Goukoto region

Around Goukoto, several targets were tested and rejected from the resource triangle. The team returned to the old Toronto target which has remained in the resource triangle over many years due to its structural complexity and high grade results from shallow orpillage workings. The work highlighted a 2km long anomalous system striking north-south with the main Toronto target at its core and the Toronto Gap target in the south. Encouraging lithosample results were returned from the Toronto Gap (33g/t and 7g/t) to the south of Toronto and an extensive trenching program was carried out around the existing mineralization at Toronto itself, the best result of which was 13.2m at 3.64g/t from the main artisanal pit in the target.

This work over the target area confirmed the structural model of a main north to north-northwest striking, silica-carbonate altered, anastomosing shear zone developed in quartzite and greywackes which is intersected by ductile northeast striking cross-structures with chlorite-sericite alteration. Higher grades are localized at the intersections of these structures, a relationship which has also been observed at P64 and MZ3 at Goukoto. However, most of the target is very narrow with artisanal miners targeting high grade vein related mineralization along the full strike.

Table of Contents

A coherent mineralized zone with a maximum 300m strike length and average true width of 5.19m was identified at Toronto does not meet Randgold's filters in terms of size and grade for a satellite deposit. The exploration work to date points to limited near-surface mineralization potential and, consequently, Toronto was removed from the resource triangle.

The exploration team has again focused on the thickness of the transported alluvium over the Goukoto area and the Goukoto southwest target and were able to look through the cover using remote exploration techniques, specifically targeting the 1.2km southwest strike extension to the main Goukoto deposit. It features limited work in the form of drilling which returned wide zones of alteration: GSWRC11 – 12m at 1.12g/t from 40m; GSWRC03 – 28m at 0.82g/t from 152m, including 2m at 4.61g/t; and GSWRC13 – 4m at 1.59g/t from 248m, and is the next priority area for exploration on the permit.

Mali greenfields

The Senegal Malian Shear Zone (SMSZ) on the Mali- Senegal border is one of the most prospective goldfields in the world with a +50Moz gold endowment along its 200km of strike. The structure is an essential control on the Sadiola/Yatela, Loulo/Goukoto, Fekola/Boto mineralized systems and a significant percentage of its strike remains unexplored. It is one of the two key structures in the Kedegou-Kenieba inlier, the other being the Main Transcurrent zone (MTZ) where Massawa is located.

As a result, the structure and its surrounding formations - the Kofi and the Keniebandi - form a key part of our exploration strategy in West Africa and our groundholdings along the structure give us access to approximately 70km of strike. This year, we have completed programs over the Bakolobi project on the SMSZ in the south of the inlier. The Bakolobi project is a joint venture with Taurus Gold Limited (Taurus Gold). We have signed a new joint venture with Legend Gold Corporation (Legend Gold) (Djelimangara project) which lies along the SMS to the immediate south of the Sadiola mining concessions and we have renewed permits at Bena, south of the Goukoto mining concession and Bambadji in Senegal, which is a joint venture with Iamgold Corporation (Iamgold).

Bena

The Bena permit has been granted again to our partner, New Mali Mining, and Randgold is the operator under the terms of the joint venture. A review of the existing targets and data on the permit has concluded that the Boulandissou target has the greatest potential to host a major system and the model has been updated, incorporating elements of the Goukoto model with intersecting northwest and north-south structures over an extended strike compared to the original model, which is now 3km.

Historical work on the target identified a 50m wide alteration envelope with best intersections including: 26m at 3.53g/t from trench BNT02 in the north and 13m at 1.57g/t from reconnaissance RC in the south. These results occur within the overall northwest trending target area and the strongest soil anomalies within this trend are interpreted to be at the intersections of northwest and north-south structures. The target lies on the western margin of a thick laterite plateau, which is composed entirely of transported alluvial material.

Prior to the year end, 1 trench (BNT11) out of 5 planned was completed in the south of the target and intersected a series of quartzite, argillite, breccias, argillaceous quartzite, quartzite and greywacke intruded by albitite and mafic intrusives. Results received for trench BNT11 included 1.80m at 0.66g/t from 55.45m on the contact between albitite and breccia. This result is from a narrow zone of silica-albite alteration with sulphide boxworks observed in the trench and, despite being narrow, the structural readings from the trench confirmed the north-northwest structural interpretation for the target.

Further mapping and sampling are progressing along the target, with recent lithosample results of 1.33g/t and 4.02g/t.

Bakolobi permit (Taurus Gold joint venture)

Following initial field mapping and ground geophysical programs completed in late 2013, a priority corridor for detailed soil sampling was established within the Kofi formation on strike between the Fekola and Goukoto deposits. This work led to the generation of 11 targets where soil anomalism occurs over dolomites, siliciclastic rocks and narrow intermediate to felsic intrusive dykes, which have been overprinted by intense brittle ductile deformation related to movement on the SMSZ.

Historical work from this corridor on the Bakolobi permit included trench results of 27m at 2.23g/t, including 9m at 5.67g/t in quartzites, and 10.4m at 1.98g/t, including 4.4m at 4.25g/t, in a porphyry. Auger holes returned: BaA221 – 15m at 1.28g/t; and BaA228 – 22m at 2.34g/t in quartzite.

Regolith mapping over the area highlighted a more erosional regime in the north of the target area with the majority of the priority area overlain by extensive paleo-alluvial gravels in the flood plain of the nearby Falémé River which have been lateritized in situ and can be up to 6m thick.

Geologically, the N-S corridor is interpreted to represent a terrain boundary between a thrust, less deformed package of rocks in the east and a more complex, folded sequence of sediments in the west. Early lithosampling across this area returned an average grade of 3g/t from 15 samples.

Table of Contents

A reconnaissance RC drilling program was carried out to fast-track the location of mineralized structures through the transported material in the area and this identified a number of mineralized zones within the target corridor with results including: 14m at 2.47g/t, including 5m at 4.56g/t; 17m at 1.55g/t, including 1m at 8.9g/t; 31m at 1.01g/t, including 7m at 2.37g/t; and 9m at 1.31g/t, including 1m at 4.09g/t. These define a system of sub-parallel N-S structures with Silica-Albite-Carbonate alteration and strong sulphide mineralization.

A program of trenching along these structures, to understand their geometry, controls and the extent of overlying transported material, is in progress but has been slow due to the layer of transported gravels at surface. The structures have been exposed, however, and results include: BKTR003 - 16.15m at 2.23g/t from 25.70m, including 3.47m at 1.53g/t from 25.70m and 5.10m at 5.33g/t from 33.5m; and BKTR002 - 10.40m at 2.41g/t from 23.60m, including 3.35m at 5.92g/t, from steeply west dipping shears. The team will move to infill trenching in the most prospective areas once the Phase 1 trenching is complete and the results have been fully analyzed to generate follow up targets.

Djelimangara project (Legend Gold joint venture)

As part of the strategy to consolidate the mineral rights portfolio around Randgold's key footprints in the West and Central African goldfields, a new joint venture agreement was signed with a subsidiary of Legend Gold who hold the rights to six permits (363km²) which straddle the SMSZ directly south of the Sadiola gold mine. Subject to results, Randgold will fully fund exploration as far as completion of a prefeasibility study to acquire a 51% interest in the project. Legend Gold has the option to cofund the feasibility study to retain 49% or dilute to 35% with Randgold increasing its stake to 65%. Both parties would fund development. The ground has previously been worked by Barrick Gold Corporation.

A comprehensive dataset has been received from Legend over the portfolio of permits including: airborne electromagnetic and magnetic data, ground Mag and IP and resistivity, geology, regolith, soil geochemistry, drilling (auger, rotary airblast (RAB), RC and DDH, pitting and trenching. The results highlight anomalism coincident with the SMSZ.

Four targets were generated over a narrow band of limestones and greywackes to the east of the SMSZ and a program of mapping pitting and trenching began in the fourth quarter.

Initial results from the work have been encouraging, with trench MAT001 returning 4.40m at 0.41g/t from 24.20m of altered medium grained sheared silicified greywacke and a main zone of 6.25m at 2.03g/t from 38.10m, including 4.85m at 2.52g/t. However, we have yet to see evidence of a large system of alteration and work is continuing along the SMSZ which exists over 18km strike within the permit area.

Morila

Exploration was halted at Morila some years ago after exhaustive work failed to locate any economic mineralization outside the main deposit. However, the team is having a last look as the mine prepares to close. Pit mapping and a core review highlighted or reinforced some of the key features associated with mineralization at Morila, such as flat faulting, the presence of magnesium rich biotite associated with arsenopyrite and leucocratic plagioclase veins around felsic intrusive bodies. Two conceptual targets were generated and have been reviewed with one of the targets hosting all the above mentioned features. Further work is now in progress to map the distribution of these features around the deposit to further reinforce the observations and potentially generate a target which, due to the existing deep drilling over the area, would be significantly deeper than 500m.

SENEGAL

Massawa

The Massawa deposit lies within one of the largest continually mineralized systems in Africa, located on a major geological discontinuity, the Main Transcurrent Zone (MTZ), in Eastern Senegal. The MTZ is a major terrain boundary structure which marks the contact of the Mako Volcanic Belt and the Diale Dalema sedimentary basin to its east.

There are two main zones of mineralization in the deposit, Northern and Central. They are part of the same northeast trending mineralized structure, which extends over 8km and has been offset by north-south belt discordant structures. The mineralized system occurs at a volcanic/sedimentary contact, where a prominent and continuous lapilli tuff unit acts as a marker horizon. The host sequences have been intruded by felsic dykes, gabbros and granitic bodies, particularly in the Central Zone (CZ) and mineralization is hosted in a variety of rocks including greywackes, volcanoclastics and both mafic (gabbros) and felsic intrusives. The mineralized system features pyrite and arsenopyrite sulphides within an alteration assemblage composed of sericite, silica and carbonate in a zone of strong brittle-ductile deformation.

A large component of the northern portion of the Massawa ore is refractory, with microscopic gold locked in the sulphide lattice of arsenopyrite. Efficient extraction of this gold requires an oxidation processes such as pressure oxidation (POX) or BIOX and the power costs associated with such metallurgical processes impact negatively on the project returns. Reserves at Massawa are currently 21Mt at 3.1g/t for 2Moz.

Table of Contents

Ongoing evaluation of the phases and controls of the mineralization points to a set of narrow, high grade shears containing quartz stibnite veins and coarse gold that overprints an early disseminated arsenopyrite-gold phase in the CZ. Recent close spaced drilling as well as ongoing trenching programs have confirmed these vein filled structures are more continuous than previously interpreted. This work highlighted a significant potential for gravity recoverable and free leaching gold within the Massawa CZ deposit.

Following the recognition of a significant coarse gold fraction in the CZ, the sample and assay methods employed at Massawa were reviewed. This program included the re-assaying of existing NQ drill core and larger samples from grade control RC drilling by Leachwell and screen fire assay methods. Additionally, 6 RC/DDH twin pairs were drilled in the south of the CZ to compare the assay results from RC and larger HQ core samples in fresh rock. The results of this work indicate that sample size and the orebody's high variability are the keys to the accurate estimation of the Massawa orebody. It also confirmed that RC drilling was a suitable method to collect a large sample from the deposit, thereby reducing the cost and time of additional drilling. As the majority of the CZ is sampled by NQ core at a 50m x 50m spacing, further work is required to accurately estimate the contained gold within the overprinting coarse-gold event. Our analysis, based on the close spaced drilling completed in the oxides of the CZ, shows that a spacing of 15m x 10m is required to accurately estimate the grade of the mineralized lodes and the completion of a close spaced orientation program in the fresh rock of the CZ is in progress before a decision is made on progressing to a phased infill drilling program across the CZ.

Exploration

On the Kanoumba permit around Massawa there are 4 satellite deposits (Sofia, Bambara, Tina and Delya) mineralized material with 2 further satellite targets of Kawsara and Tombo. During the year, the team tested and rejected a number of targets within the Mako belt where results from lithosampling, pitting and trenching failed to identify the potential for a large hydrothermal system. The West KA target, 20km to the south of Massawa, yielded some interesting results with values of up to 15.4g/t returned from the sampling of a set of multiple shear zones in a corridor of approximately 200m width over a 2km strike. However, the ongoing feasibility work at Massawa has been prioritized and exploration will resume pending the conclusion from a prospectivity study of the Mako belt.

Bambadji

Work on the Bambadji permit was paused for a significant part of the year because the permit had expired. It has now been renewed and granted to a subsidiary of Iamgold Corporation, our joint venture partner, for a further three years. A review incorporating all historical data was carried out during the wet season which identified twelve second and third order soil anomalies which have received limited follow-up work. They are located within favorable geological and structural settings. However, the regolith is complex with transported cover being a significant factor over the eastern limits of the permit.

Randgold continues to believe that the Bambadji permit is prospective and hosts the lithologies, alteration and structures required to generate world-class orebodies. However, after seven years of exploration without significant success, it represents too high a risk under our current agreements and we are therefore renegotiating terms with both our joint venture partner and the Senegalese government.

Côte d'Ivoire

In the Tongon SZ pit, infill drilling targeting an updated and improved geological model incorporating the Skarn type alteration added 475,000oz to the reserve which replaced the 2014 depletion from mining, while a number of additional opportunities were identified within the Tongon deposit for further orebody conversion. A program to convert the remaining mineralized material within the pit is underway. At the same time, 6 holes (1,007m) were drilled to test for higher grades or wider zones of mineralization at the intersections between flat and steeper structures below the base of the \$1,000/oz pit. Due to the structural complexity of the Tongon SZ, it is believed that the model can be upgraded, particularly where the drill spacing is relatively wide at depth. The drilling intersected zones of intense alteration associated with strong sulphides and occurrences of crosscutting structures in most of the holes, which confirmed the targeted model. In a number of cases mineralization was stronger or wider than the existing model and additional mineralization was intersected on structures outside the current model, all pointing to the additional exploration potential.

Two main styles of alteration are readily observable in the mineralized zones: strong silicification almost completely overprinting the original lithology and strong pervasive biotite alteration. Both domains host strong disseminated to patchy sulphides with a strong association between biotite alteration and arsenopyrite mineralization.

Potential gains are thought to be most likely in the northern limits of the southern zone pit where higher grades exist and one hole returned 8.2m at 3.2g/t and 12.9m at 3.03g/t where the model predicted 6.5m at 2.44g/t and 6.5m at 2.39g/t respectively.

Table of Contents

Satellites

As Tongon moves towards repaying its capital in 2015 and with the mine being supplied by low cost grid power, a number of low grade opportunities around the deposit can provide optionality to the operation. Four satellite targets within 10km of the Tongon deposit were further drill tested during the year. The most advanced of these is Sekala. In addition to the work at Sekala, further modelling of the Seydou south, Seydou north and Tongon east targets to determine their potential was completed. At Seydou north and south, it is interpreted that higher grade lodes are linked to crosscutting structures between the brittle northeast structures and northsouth shears. Further work is required to fully understand this.

At Tongon east, RC drilling returned narrow zones of low grade mineralization and failed to extend the previously modeled anomalism. Therefore, no further work is suggested at this target.

Skarn

Tongon was identified as a skarn gold deposit in 2013 and well-developed spatial and temporal mineral zonation patterns, typical of gold skarns, are evident in both the SZ and NZ. Zonation is classified based on garnet: pyroxene ratios, chemistry of the major calc-silicate phases, the skarn color and grain size, and the degree of retrograde replacement (epidote-clinozosite, prehnite-pumpellyite).

Relogging of the Tongon orebody was completed to create a detailed model of the skarn system, which can be used to improve the reserve estimate through the modeling of the alteration and garnet fronts as well as for exploration targeting around the pit. Skarn mineral zonation could be useful as a mineralization vector, as gold is largely confined to the intermediate skarn zone at Tongon. A 3D model of the various alteration assemblages (clinopyroxene-garnet skarn and retrograde alteration zones) is being completed and this model will be used to redefine the structural model of the Tongon orebody and identify potential targets for further testing.

Satellite targets within a 15km radius of Tongon have been investigated and seen to be unrelated to Skarn alteration. More regionally the Ouobolo granodiorite at Fapoha was shown to closely match the generalized composition of gold Skarn related intrusions and is very similar to the Tongon granodiorite, a relatively reduced high-K to calcalkaline granodiorite.

Further afield across the Nielle permit, the team is working on a review of all historical exploration data. This will lead to an updated geological interpretation and prospectivity analysis for the Nielle permit which will be used to

direct exploration work going forward. Early stage fieldwork has started over the Bladonon-Bodonon corridor, which is a relatively untested anomalous trend over 15km in the southwest of the permit. The targets of Coucal, Nafoun E, Forrest, Calao and Nielle S were all further tested during the year with the Coucal and Calao being rejected. The remaining targets are still in the resource triangle and will be reprioritized with the completion of the permit scale prospectivity review.

Greenfields

The Côte d'Ivoire exploration strategy was reviewed early in the year and, as a result, we decided to concentrate resources and skills on the most promising parts of a large groundholding of 4,500km² across the north of the country. Intensive exploration work over Diaouala during the past 4 years failed to find any indication of a large mineralized system and a decision was taken to drop the permit.

Mankono permit

The Mankono permit lies 160km to the southwest of Tongon on the intersection of the Senefou belt (which hosts the Tongon deposit) and the Boundiali belt. The permit features a northeast striking volcanic/sedimentary contact along its axis intruded by mafic, and felsic intrusions.

The permit features 4 large gold in soil anomalies prioritized for follow-up work. Infill soil sampling over the priority 1 anomaly, Bafretou, confirmed the 21km long regional soil anomaly with a significant number of high values of up to 4g/t within a high tenor anomaly of over 50ppb on residual soils close to the contact between volcanic and sedimentary rocks. Pitting, trenching and reconnaissance aircore drilling over the anomaly returned weakly anomalous results from narrow altered zones around dioritic dykes within a wide package of relatively homogenous andesites and failed to explain the surface anomaly. Intersections from the drilling include: 15m at 0.21g/t from 0m; 6m at 1.08g/t from 15m; 21m at 0.95g/t from 9m, including 3m at 5.13g/t from 9m; 26m at 0.33g/t from 21m; 12m at 0.62g/t from 0m; 3m at 1.06g/t from 12m; and 3m at 2.01g/t, and the target's priority was downgraded. However, it remains in our resource triangle and further work is planned including the completion of a ground magnetic survey and further interpretation leading to a phase of pitting and trenching.

Meanwhile, the team has been progressing the second priority target, Gbongogo, in the northwest of the permit, which features an interesting regional fold axis with a coincident 3.5km long soil anomaly returning values up to 2.3g/t. Pitting and trenching over the hinge of the fold exposed schistose sediments, which have undergone silicasericite, moderate carbonate and magnetite alteration and are a higher metamorphic grade than surrounding rocks.

Trench intersections include: BGTR001 – 23m at 1.25g/t, including 7m at 3.05g/t; and BGTR003 – 103m at 1.30g/t, including 26m at 1.82g/t and 34m at 1.33g/t. Both trenches, however, include a number of sub-parallel Quartz vein

sets which are

- 50 -

Table of Contents

mineralized and inevitably influencing results. The team is now investigating whether these veins represent a stockwork in the brittle deformed sediments in the fold hinge.

Fapoha permit

The Fapoha permit is located along the southern strike extension of the Senefou belt to the South of the Nielle permit. The permit features a sheared volcanic/sediment contact over the full 40km strike with a number of large (+15km) gold in soil anomalies along the belt. Work this year on the southern anomaly adjacent to the Oubolo Granodiorite, a Tongon type intrusion, has identified a +4km long anomalous corridor with results from aircore drilling including: 39m at 1.54g/t including 12m at 3.86g/t; 33m at 0.51g/t; 27m at 0.45g/t; and 12m at 0.53g/t. Trenching over this corridor for more structural information has returned results of: 25m at 0.43g/t, including 3m at 1.12g/t; and 21m at 1.55g/t, including 8m at 3.50g/t, along with a number of mineralized samples from pits along the same trend hosted in sheared volcanics and greywacke with silica, sericite and carbonate alteration. We believe that zones of high grade mineralization could be located within this mineralized corridor and continue the infill work to test this concept. Additionally, several large untested anomalies remain to be investigated.

Boundiali

At Boundiali, promising results, interpreted as a thrust at the Fonondara target, have been received from trenches across an east dipping structure. This target was discovered through a reconnaissance drilling program two seasons ago where results of 30m at 1.43g/t and 19m at 0.88g/t were received beneath a large regional soil anomaly.

Encouraging results from early Fonondara trenching (16m at 2.87g/t including 9m at 4.92g/t) over these drill intersections were followed up by further trenches this year which have confirmed the strike of the mineralized structure over 1.5km with an average grade of 2g/t within moderately silicified volcanics. Trench intersections include: 17.26m at 2.16g/t, including 5.48m at 4.59g/t; 14.10m at 1.56g/t, including 1.30m at 3.18g/t; and 16m at 2.50g/t including 11m at 3.49g/t. Trench intersections do not represent true widths due to the shallow dipping nature of the mineralized structure but the target represents a significant mineralized structure which may dilate at depth or along strike and will be the focus of further work in 2015.

Regional

As part of Randgold's long term strategy in Côte d'Ivoire, we have upgraded our understanding of the geology through a program of regional mapping across the country. This resulted in a reinterpretation of the countryscale geological

map with notable changes, mainly to the extent of the intrusive bodies and the delineation of new areas of greenstones. Subsequently, ten permit applications were submitted in priority areas in the south of the country.

We have also been granted two new permits through old applications, Tengrela South and Kouassi Detekro North. Currently, Randgold and its Ivorian partners hold a portfolio of eight permits for 4,500km² which provides the flexibility to prioritize permits as well as targets within the portfolio.

Table of Contents

Democratic Republic of Congo

Kibali

The Kibali project is located over a world-class gold belt in the Archean of northeast DRC where Randgold holds ground over 35km strike of the KZ structure, a regional mineralized trend which hosts the giant 17Moz KCD deposit with a banked LoM of over 10 years. Brownfields exploration this year focused on drilling of Gorumbwa and Mofu. Follow-up work on early stage targets at the base of the resource triangle continued as part of a wider initiative along the KZ structure, which is believed to be a major transcrustal discontinuity that has focused deformation and fluid flow along its strike.

KCD

The focus of the brownfields exploration work moved from KCD to Gorumbwa and other satellite deposits in 2014. Limited work was completed at KCD as the geology teams have been busy with the start of underground operations. A target generation exercise around the development at KCD identified 7 targets immediately beneath the base of the \$1,000/oz pit. Four holes were drilled into a gap on the 3000 lode where a 250m x 50m by 50m gap in drilling between 5600 and 5720 levels existed. Results failed to highlight significant high grade continuity with the exception of hole DDD598 which intersected 59.15m at 4.07g/t from 103.85m (including 20m at 9.01g/t from 103.85m) compared to the model prediction of 71.19m at 1.53g/t. The hole also intersected 16.05m at 2.35g/t from 223.25m and 10.9m at 3.05g/t and the potential for mineralization continuing further to the west is being reviewed.

The team also started a trenching and mapping program over Durba Hill to test for the extension of mineralized lodes between Gorumbwa and KCD. Anomalous results had been received from one trench and one road cutting including 4m at 1.14g/t, including 2m at 1.35g/t within a foliated, silicified metaconglomerate with boxworks.

Mofu

Mofu is located approximately 3km northwest of the Mengu Hill deposit and features a mineralized zone at surface of 12.2m average width at 7.8g/t extending over 300m strike. However, strong grades pinch out approximately 50m down plunge. This shallow mineralization was further investigated by a combination of 69 close spaced exploration and advanced grade control RC holes (3,062m). The drilling produced a revised geological model. Following a technical and economic assessment the deposit was subsequently added to reserves as a satellite pit and was being mined by the end of the year.

Gorumbwa

Gorumbwa is an old Belgian mine located approximately 800m west of KCD. Mineralization is hosted in 8 vertically stacked, northeast plunging lenses which are hosted within a fine grained meta-arenite package overlain by coarser grained conglomeratic units, and cut by bedding sub-parallel dolerite dykes. Drilling of 69 diamond holes (15,012m), 47 RC holes (4,467m) and sonar surveys of underground and historic open pit workings were completed as part of a feasibility study during the year. The results contributed to the development of revised geological and mineralization models. This pit contains a small amount of mineralized material that requires infill drilling which is the current focus of further conversion work. The Gorumbwa open pit will require the relocation of 650 households and carries an appreciable capital cost. The team is also reviewing the Megi opportunity, which is 6.5km from the plant. Further work will be conducted to increase our knowledge of this opportunity and complete a full trade-off between the profitability of Gorumbwa and Megi.

KZ Structure

The Kibali project is located on a major transcrustal structure or set of structures, which is strongly anomalous compared to anything else on the project and is our priority target for greenfields exploration. The KZ structure is an anomalous trend, which extends over 35km and may represent a deep mantle tapping structure, in many ways comparable to the SMSZ in Western Mali. These features are known to propagate through the crust and often mark major breaks in the sub continental lithospheric mantle where giant orebodies are more likely to form.

The feature runs from Kalimva in the north, through Mengu Hill, Pakaka, KCD, Kibali S, Aindi Watsa and onto Zambula in the south. Currently, all of the reserves at Kibali are located along or near to the feature. Analysis of the historical work along the structure shows over half the strike to be untested below 50m.

Ongoing analysis of the structure has confirmed it to be a complex, multiply reactivated zone of folding and faulting with at least three pre- to syn-mineralization phases of folding and faulting and at least three post mineralization deformation events. The lack of continuity of stratigraphic units along the KZ structure, at least as planar features parallel with the foliation measurements, reinforces the observation that tight localized folding is a key part of the KZ structure beyond the immediate vicinity of KCD pit.

Table of Contents

Exploration at Kibali is concentrated along this structure. In the KCD area a gradient array surface IP survey over the Agbarabo, Rhino, Kombokolo to Kanga Sud target areas highlighted features in both the chargeability and resistivity data which are interpreted as being ironstone units and carbonaceous shales respectively. Surface work to test these anomalies is ongoing and has returned weak results, such as 4m at 0.68g/t from trench KKTR0002 at Rhino southeast and 10m at 1.4g/t in trench KKTR0001 at Kombokolo southwest in weakly, silica-altered sediments.

Aindi Watsa

At Aindi Watsa, located approximately 6km south-southwest of KCD, mapping, lithosampling, pitting and trenching activities defined low order gold mineralization trending ENE associated with a ridge of hematitic chert-BIF unit that dips moderately to the N. Sixteen trenches excavated over 850m of strike length returned an average intersection of 7.9m at 1.51g/t with mineralization open to the W and down plunge. Lineations and small scale fold hinges plunge to the northeast, and host high grades of up to 14.1g/t. This target has now been reprioritized within the KZ structure portfolio.

Ikamva-Kalimva

During the last quarter of the year, work resumed at the Ikamva-Kalimva target which is considered to be one of the more prospective parts of the KZ structure, in a folded area with structural similarities to the KCD area. The target features a number of old Belgian workings within an area where northeast striking structures disrupt the northwest-southeast striking ironstone units. Mineralization is hosted in plunging folds close to the ironstone contact and in close proximity to the northeast structures. Historical drilling at Kalimva-Ikamva has returned a number of intersections from these shoots of mineralization including: KVDD0001 – 73.65m at 3.41g/t from 20.4m; KVDD0002 – 26.03m at 2.57g/t from 50m; and IVDD0006 – 31.4m at 2.65g/t from 31.7m. Recent work has focused on an area of 800m x 300m which features prospective geology of BIF, banded chert, metaconglomerate, metasandstone, metasiltstone and carbonaceous shale with results from pits of between 0.6g/t and 3.9 g/t with lithosamples grading up to 4.3g/t and trenching is in progress to evaluate this mineralization.

Isiro (Kilo Goldmines joint venture)

Randgold has entered into a joint venture with a subsidiary of Kilo Goldmines Limited (Kilo Goldmines) in the DRC which provides Randgold with access to 1,920km² of prospective Archaean age geology over the Northern Ngayu and Isiro greenstone belts in northeast DRC (Kilo Goldmines joint venture). Work on both belts continued through the year.

Ngayu belt

Work this season has progressed the Yambeda/Yasua, Bonzuzu and Mbese targets, with results from Yambenda confirming the regional soil results, revealing a 9.6km WNW trending 50ppb anomaly including seven pods of +100ppb measuring up to 750m x 300m in strike. The anomaly sits in residual soils overlying a WNW trending ridge of banded iron formation. The banded iron formation is haematite rich in the ESE and more magnetite rich in the WNW possibly reflecting the lateral facies changed in the environment or possible demagnetization along the structure. Litho sampling has returned values up to 1.71g/t in the BIF.

The results from an infill pitting program over the target have identified a wide anomalous corridor beneath the strongest soil anomalies. The width of anomalism varies between 65m and 120m with saprolite values reaching 2.77g/t. The anomalous corridor coincides with the topographic ridge and structural readings have produced an interpretation of a parallel antiform-synform pair with hinges plunging gently to the ESE.

Trench YBTR001 excavated within the anomalous corridor intercepted 11.30m at 1.02g/t from 28m (including 4m at 1.30g/t and 4m at 1.50g/t) within a 76.1m wide anomalous zone.

Further pitting and trenching are planned to confirm the fold model and the continuity of the anomalous zone while also extending its strike. The team is working on the identification of controls on the higher grades within the anomalous corridor to identify targets for follow up work in 2015.

Isiro belt

A regional soil sampling and mapping program has been completed over the southern part of the Isiro belt. The soil results generally reported a low background value over the permit with only five +70ppb anomalies identified in the southern part of the belt which features wide sequences of thrust BIFS in a regional scale, open fold.

Follow up mapping and sampling over the targets has not returned any significant results this year and our work indicates that parts of the belt are of a relatively high, low to mid amphibolite metamorphic grade. Further work is planned over the targets, as well as a review of the more linear western extension of the belt.

Table of Contents

Generative work

The ongoing turmoil in the gold mining industry continues to generate potential opportunities and the generative team is continuously reviewing these projects. Randgold's focus remains on the identification of new world class gold districts within Africa, specifically around the West African and Congo/Tanzanian Cratons with the potential to meet our investment criteria of a 20% return at a \$1,000/oz gold price with a minimum deposit size of 3Moz. Our four principal target areas are the Mako Belt in eastern Senegal, the SMSZ in western Mali, Ivory Coast and northeast DRC, with further research being conducted across Cameroon, South Sudan and Tanzania.

Randgold continues to maintain its focus on organic growth through the discovery and development of world-class orebodies, and has a pipeline of high quality projects and exploration targets. Notwithstanding this core strategy, given the increased balance sheet stress across the industry and our view that the industry needs to reinvent itself, the company's routine review of corporate and asset acquisition and merger opportunities is receiving additional attention.

The reporting of ore reserves is in accordance with Industry Guide 7. Pit optimizations are carried out at a gold price of \$1,000/oz, except for Morila which was carried out using a \$1,300/oz pit optimization. Ore reserves are reported at

a cut-off grade based on \$1,000/oz. gold price within the pit designs. Underground reserves are also based on a gold price of \$ 1,000/oz. Dilution and ore loss are incorporated into the calculation of reserves.

Addition of individual line items may not sum to sub totals because of rounding.

The following map shows the position of our current permits in West Africa:

- 57 -

Table of Contents

The following map shows the position of our current permits in Central Africa:

Although we believe that our exploration permits will be renewed when they expire, based on the current applicable laws in the respective countries in which we have obtained permits, there can be no assurance that those permits will be renewed on the same or similar terms, or at all. In addition, although the mining laws of Mali, Côte d'Ivoire, Senegal and DRC provide a right to mine should an economic orebody be discovered on a property held under an exploration permit, there can be no assurance that the relevant government will issue a permit that would allow us to mine. All mineral rights within the countries in which we are currently prospecting are state-owned. Our interests effectively grant us the right to develop and participate in any mine development on the permit areas.

SOCIAL RESPONSIBILITY AND ENVIRONMENTAL SUSTAINABILITY

sustainability governance

This section explains how sustainability is managed within the company. This includes the policies and procedures we have in place to ensure we engage effectively with our stakeholders and for identifying and reporting on sustainability risks and opportunities.

Management of sustainability

Sustainability governance flows from the top down at Randgold, with our board holding ultimate responsibility for all our efforts in this area. The board is supported by the environmental and social (E&S) committee, which meets quarterly and is chaired by our CEO. Although ultimate responsibility for our sustainability work rests at the top, we avoid a hierarchical structure by enabling a bottom-up approach as well. That is why, for example, our CEO attends regular mass meetings with employees, community leaders and other local representatives or why community grievances may be discussed at the E&S committee.

Day to day executive responsibility for implementing our sustainability policies and for achieving the sustainability targets and KPIs outlined in this report rests with the group environmental, community and safety managers. They report directly to the chief operating officers (sitting above the general managers), providing an important layer of independent sustainability oversight. In 2014, the corporate and sustainability reporting function was contracted to an independent, external consultant, reporting directly to the E&S committee and the board of the company.

The key role of this governance structure is to ensure we identify all sustainability issues and opportunities at an early stage, and have in place the right people and policies to deal with them. This risk-based approach is at the root of our ability to deliver good value.

A key part of our management approach is to ensure that sustainability is considered at all stages of a mine project. For example, even at the earliest stage of a mine project (the exploration phase), Randgold will put a formal grievance mechanism for the local community into operation. During the feasibility phase of a project we conduct detailed ESIA's to understand what sustainability risks exist; and when a mine begins production (the operational phase) we put in place detailed management structures, targets and performance assessments, including an environmental management system, to ensure these risks are controlled. From day one of operation, each mine is therefore focused on ensuring that it does not create any long term environmental liabilities and that it puts in place a viable strategy for

postclosure economic growth.

Corporate governance

Our Code of Conduct helps ensure our values are applied throughout the company and defines the standards of behavior expected of all directors, employees and contractors. It sets out our standard on a range of issues including bribery, whistle blowing, record-keeping, fraud, interactions with governments and sustainable development. Contravention of this code would lead to disciplinary action and the potential termination of employment. The importance of complying with our Code of Conduct is explained to all new employees as a central part of their induction training.

Where appropriate, we include achievement of sustainability targets as a component of bonus-based remuneration packages. We also build succession planning in every executive management position, including our CEO, to ensure that our sustainability work is built into the DNA of our company.

As part of our tendering procedure we also encourage all contractors and service providers to implement our human rights, environmental and social standards, anticorruption and anti-bribery policies in their organizations. As detailed throughout this sustainability report, Randgold has a comprehensive set of policies and practices in place to deal with all our sustainability challenges. We rely on our people to effectively implement these policies, which have evolved through years of experience and are crafted to comply with host country legislation. This means that we tend not to officially adopt or endorse specific international charters or sustainability initiatives, even though we often agree with them and work to support them.

Examples of international standards or initiatives that fall into this description include the IFC Performance Standards, World Bank Operational Guidelines, OECD Convention on Combating Bribery and the Voluntary Principles on Security and Human Rights.

Anti-corruption measures

The group's Code of Conduct requires all our personnel, and the personnel of our contractors, suppliers and partners not to engage in any form of bribery or corruption. Randgold undertakes due diligence on the parties it does business with. Our personnel are also trained in anti-bribery and corruption measures to ensure the group's Code of Conduct is fully adhered to.

The group operates a whistle blowing policy where all our personnel and the personnel of our suppliers, contractors and partners are encouraged to report any breach or suspected breach of the group's anti-corruption and antibribery policies to the group's

- 59 -

Table of Contents

compliance officer. Our anti-bribery and anti-corruption policies and practices are regularly audited to assess the adequacy of and compliance with our Code of Conduct.

We believe in full transparency in our dealings with governments and we fully encourage our host governments' efforts to establish procedures to ensure revenue transparency in accordance with international standards.

Stakeholder engagement

Ongoing discussion with our stakeholders is at the heart of our approach to sustainability. It allows us to understand their needs and therefore to build the deep partnerships that enable us to succeed. Our stakeholder engagement program aims to facilitate these discussions.

Our engagement program categorizes our stakeholders into eight specific groups: shareholders, employees, local communities, governments, relevant NGOs, trade unions, suppliers/contractors and the media. It ensures we communicate with all eight groups regularly throughout the year. Some of the elements included in this are:

- § Quarterly results presentations to local authorities, and an annual presentation of results and performance to local communities;
- § Monthly updates with local chiefs and community committees;
- § The attendance of trade union representatives at mine-level board meetings and strategic planning sessions;
- § Community grievance mechanisms in place at all sites;
- § Annual materiality assessment;
- § Mass meetings with our CEO which are open to all mine employees, community leaders and other representatives.

This year our program has also included formal public meetings with community leaders and local authorities to receive feedback on last year's sustainability report. There were also a total of three public participation programs (PPPs) this year linked to ESIA's around proposed new pits and hydropower stations at Kibali, DRC and the underground development at Goukoto, Mali.

Materiality assessment

In 2013, Randgold conducted a 'materiality assessment', surveying both internal and external stakeholders to ask what they perceived our most critical sustainability risks to be.

This exercise helped us to compare what both internal management and external stakeholders perceive to be our most pressing sustainability issues and gives our executive management a useful tool to help ensure we are better aligned with all our stakeholders' needs.

At the conclusion of the process we were able to identify the sustainability issues were assessed to be of highest priority by all stakeholders combined. We refer to this materiality assessment in this section.

The data on environmental, safety and economic impacts presented covers all six of our operational and development sites situated in Mali, Côte d'Ivoire, Democratic Republic of Congo and Senegal. With the exception of GHG emissions, it excludes our offices and guesthouses.

The data for previous years is provided in certain instances for comparative purposes. A selection of the sustainability information has been assured by an independent assurance provider, Environmental and Sustainability Solutions (ESS).

In terms of our value chain, all our gold (100%) is sold to the South African based refinery, Rand Refinery (Pty) Limited (Rand Refinery), which has an internationally respected reputation for integrity and ethics. Rand Refinery certified that its entire chain of custody is responsible and 'conflict free' and this certification is independently audited. Rand Refinery is also a member of the World Gold Council and the Responsible Jewellery Council. Randgold does not buy any minerals from artisanal miners.

Economic development

Our materiality assessment highlighted several 'economic development' issues to be managed including the need to create jobs and value in our host countries, to source products and services from local suppliers, to improve skills and to be transparent about revenue flows. We see all these issues as not only important risks to be managed but also a crucial pillar of our business strategy. We make significant contributions to host government revenues through taxes, royalties and dividends; and we create gold mines that act as a commercial engine to power local economic growth. Our strategy is that this combination helps to turn remote corners of some of the world's poorest countries into robust economic dynamos, in turn helping us form the strong relationships that enable our business to succeed.

Table of Contents

Our policies and performance

Randgold has a set of policies that aims to ensure that our mine projects are genuine partnerships with our host countries. These include joint ownership structures for all our respective mines (the states of Mali, Côte d'Ivoire and the DRC all have stakes of at least 10% in our respective mines), investments in major infrastructure, a commitment to transparency and long term agreements within our mining code obligations. Infrastructure is widely lacking across much of sub-Saharan Africa, where we operate, and is estimated to limit the continent's GDP growth by two percentage points each year. For this reason, the creation of roads, power stations and telecommunication networks plays an important role in our contribution to national economic development.

Our infrastructure projects are by nature mutually beneficial: they both enable the construction and efficient operation of our mines and also ensure the ongoing ability of the local community to thrive and prosper.

Revving up local economic engines

An important part of our contribution to national economic development is our preferential procurement policy which commits us to buying products and services from local companies whenever possible. This helps foster a thriving local economy around each of our mines.

To support local small and medium sized enterprises (SMEs), we also provided business mentoring and training to a set of community companies in 2014 – including those working in areas such as borehole management, gardening, jam making and waste management.

We actively encourage wider economic activity and wealth creation that is not directly linked to the mine.

Knowledge transfer

When local suppliers do not have the right level of quality or expertise to meet our procurement requirements, we try to facilitate skill training or mentoring support from leading international companies in order to build local capacity. We believe this is an important contribution to national economic development as it helps world-class skills to enter and stay in the local workforce.

Our policy of requiring all suppliers to respect our sustainability and human rights policies also helps improve the quality and standards of local businesses and builds their capacity to access opportunities with other multinational companies in the future.

With over 90% of our workforce comprised of nationals, we are helping to improve skills and knowledge levels for each host country's mining sector.

Prepared for crisis: Managing the Ebola risk

The outbreak of the Ebola virus in West Africa in 2014 was one of the most widely reported stories of the year. Randgold is no stranger to crises having managed our gold mines at times of civil wars and coups d'état, and this has been a situation that we continue to manage with high levels of alertness, preparedness and in partnership with relevant local authorities in each country of operation.

Preparedness and prevention

The Ebola virus is a serious infectious disease that can be easily transmitted through contact with body fluids, traditional burial services or as a result of handling bushmeat. We continue to apply the medical protocols for the identification, treatment and containment of the virus that we established in 2014.

These include a prevention program that means all mine personnel are screened for fever with contactless temperature monitors outside the mine entrance, and has seen all mines equipped with Ebola personal protective equipment (PPE), disinfection kits and mobile isolation units. Should any cases of the virus be detected, we have worked with international medical experts to establish a strict protocol for tracing and disposing of infected or potentially infected materials.

In 2014, we also formed a crisis team that includes all our senior medical officers who met weekly, and continue to do so, and who remain in constant contact with host governments, the World Health Organization and other NGOs to ensure that we are fully up to speed with the state of the epidemic and the measures being taken to contain it.

Partnerships in health

The key to Randgold's crisis management approach is to integrate our responses with those of our host countries. In the case of the Ebola virus outbreak, this has included working with the Malian authorities in October 2014 to act swiftly to identify and contain the country's first confirmed case of the Ebola virus. Randgold provided medical supplies to the hospital where the young victim was taken and was in close contact with the regional health director and national director of health. We have also been working closely with the Ivorian minister of health and the wider mining industry to coordinate our efforts against the disease throughout the year.

- 61 -

Table of Contents

It is a great advantage that most of Randgold's medical officers are West African and consequently very familiar with local practices and tropical diseases. In addition, the group's chief medical officer, Dr. Haladou Manirou, has become the only West African on the Ebola Private Sector Mobilisation Group (EPSMG) – one of the main international bodies leading the medical response to the virus. As it did to rescue the region's failing tropical disease control program of a few years ago, Randgold mobilized industry support through EPSMG for the Malian health authorities in their effort to contain the spread of the virus after the first case was reported. EPSMG meets weekly to share information on best practice in dealing with the disease. Due to the additional medical expertise, capacity and funding the private sector provided, Mali was officially declared Ebola-free at the beginning of 2015 by the United Nations Mission for Ebola Emergency Response.

Working with local NGOs has been crucial to our partnership approach. In 2014, our health teams have worked with local Malian NGO SOMAPIT to help train community healthcare workers on Ebola management and have worked with the National Program of Hygiene at Borders to raise awareness and screening levels at Doko airport in the DRC.

Alertness and awareness

Continued alertness and awareness is the key to continuing our successful response to the virus so far, and ensuring it does not spread to currently uninfected areas. Randgold is continuing an intensive drive to raise awareness among our employees and local communities about the manifestation and treatment of the Ebola virus symptoms.

Community development

Engagement with, and investment in, the local community both ranked very highly in our materiality assessment in 2013; and they sit alongside other community based issues such as artisanal mining, grievance management, resettlement and human rights as vital areas of our sustainability work.

Our policies and performance

We believe that the people who are best equipped to shape community development are the local community themselves. That is why we have established elected community development committees (CDCs) at the heart of our community investment.

CDCs consist of local leaders and women and youth group representatives who become responsible for the allocation of a community investment budget. Each community investment budget is designed to reflect a mine's production levels and is spent on local projects that fall within five broad sustainable development categories: primary healthcare, education, food security, potable water and local economic development.

Each Randgold mine works closely with its CDCs to ensure that the projects they invest in can be maintained after the mine has closed. For example, if the CDC invests in drilling boreholes, we ensure there is also training for villagers to maintain and repair those water sources in the future. Where possible, we partner with local NGOs to harness their knowledge and expertise too.

Community development committee activity in 2014

Tongon

The Tongon CDC increased its spending by over 70% in 2014, investing over \$580,000 in community projects. Among other initiatives, this helped fund two new maternity wards, the Korokara water project and the construction of five school classrooms in the town of M'bengue. There was also support for the creation of a community radio station for the region, following successful work to support Radio Sanso in Mali.

Morila

Spending by the Morila CDC increased by over 23% in 2014 reaching \$182,862. Morila is the longest-standing CDC and projects last year included fixing a solar-powered borehole, financial support to local schools, training for community members in tractor management and the creation of a major new youth complex. A fund established for the sale of scrap metal also enabled a new health care center to be built at Figola, a nearby village.

Loulo

Spending by the Loulo CDC decreased by 45% in 2014, but the committee still invested over \$238,000 in local projects. This included training in new economic sectors for local women; financial assistance to a local committee to help prevent the spread of the Ebola virus, assistance to the elderly, teacher salary payments and work to improve the profitability of several businesses in the local community. During 2015, the construction of infrastructure for the agribusiness project, to the value of \$1.3 million, will be completed

Table of Contents

Goukoto

The Goukoto committee benefited from a large increase in spending in 2014, due largely to the upfront costs required to construct a new agribusiness center in the community. In total, committee spending increased by 81% on 2013 levels to over \$735,000. Other projects that the committee funded included the distribution of Ebola-prevention kits, the equipping of a high school computer laboratory in the town of Kenieba and the drilling of a new water borehole.

Kibali

At Kibali, the committee is now entering its second year and increased its spending by over 200% in 2014. The committee helped fund the construction or maintenance of several local facilities including Surur School, road and bridge repair and the handover of the local health clinic to the provincial government in the Orientale Province. We believe that passing the ownership and management of assets such as health clinics to local control is key to ensuring that development is locked in for the long term.

Hearing and resolving grievances

Creating and sustaining an open, two-way channel of communication between each mine and its surrounding community is at the heart of our community development approach. Our grievance mechanism is therefore a key tool for Randgold. The mechanism is based on guidance laid out in the IFC Performance Standards and the Equator Principles and aims to be an approachable, transparent and fair way for community members to register any non-employment related worries or complaints they have on the impacts of the mine. It is a mechanism that we set up at a very early stage and which we advertise widely using local radio, posters and local notice boards. We commit to responding to all grievances within one week.

Peaceful and progressive resettlement

We strive to avoid resettling households when we create our mines, but when resettlement does need to take place our policy is to make sure that the affected person is at the center of the process. Affected households are engaged at an early stage and throughout the process in order to create an agreed RAP, and our process commits to ensuring that their standard of living is improved or at the very least restored.

Resettlement Figures

	2014	2013	2012
Number of households resettled	29	4,216	1,208
RAP expenditure	\$0.4 million	\$92.4 million	\$51.0 million

Respecting human rights

Randgold published a detailed update of our human rights policy in 2012, outlining our commitment to upholding fundamental human rights wherever we do business. The policy covers all aspects of our business including, but not limited to, areas of employment, resettlement, engagement of private security forces and our work with suppliers and contractors.

Finance for development

As part of our efforts to catalyze sustainable economic development, Randgold has begun to increasingly use microfinance as a tool. This fosters entrepreneurialism in areas where there have historically been no banks or access to other kinds of credit.

Our policy is to support existing appropriately accredited institutions to lend where possible rather than doing so directly. This is because we want to harness their expertise but also to ensure that we foster a culture of independence and not reliance on the mine. We also encourage the institutions to lend at a low interest rate.

There was particularly encouraging progress in Côte d'Ivoire where, in its first full year of operation, the microfinance facility proved popular and recorded a 98% recovery of loans with approximately 30% of loans going to women. In 2015, we will work with appropriately accredited institutions to establish a microfinance facility for Kibali.

Separate to Randgold's core work, we were delighted that the newly created charitable foundation Nos Vies en Partage Foundation (which roughly translates as 'sharing prosperity') enjoyed its first full year of operation in 2014.

The foundation aims to spread the benefits of development beyond the surroundings of Randgold's mines including in countries such as Angola, Benin, Gabon and Ghana. One of the foundation's focuses is on projects supporting women and children - who typically benefit the least from economic growth.

Already Nos Vies en Partage Foundation has supported projects across 11 sub-Saharan African countries. These include assistance to orphanages, a center for physically and mentally disadvantaged children, a home caring for the elderly, a number of NGOs providing assistance to women and ill or neglected children and a charity supporting children with cancer.

- 63 -

Table of Contents

The foundation is funded partly from the money raised by the sponsored motorbike tour from Abidjan in Côte d'Ivoire to Cape Town, South Africa, that Randgold's CEO Mark Bristow, his son Craig, and a number of friends completed in 2014.

Meeting the development challenge together

We want to ensure that by building world-class gold mines, in partnership with our host countries, we create tangible and lasting development benefits for local communities. However, the challenges on the ground every day are very real and very extensive, so the question of where to 'draw the line' on community investment is one that is regularly discussed.

On the one hand, our commercial interests lead us to invest significantly in areas such as primary healthcare, drinking water and education. Yet on the other hand, as a business, a limit has to be placed on our role so that more permanent, publicly-owned entities can take over and ensure the social development we foster lasts long after our mines have closed.

From outputs to outcomes

To constantly improve our impact in the communities where we operate, we have also committed to monitor the 'outcomes' of our community development work more closely, instead of just the 'outputs'.

This year, therefore, instead of only measuring how many schools or classrooms are built, we have also looked at areas such as class sizes because smaller class sizes are commonly regarded to lead to better overall educational outcomes for the student. We have also monitored the provision of basic resources to schools.

The new schools built by Randgold are delivering smaller than average class sizes in DRC and Mali and higher than average connectivity to drinking water and, in Mali only, electricity. However it is clear that more work needs to be done to reduce class sizes in Côte d'Ivoire and to improve access to electricity and water both in Côte d'Ivoire and DRC.

We believe that our partnership approach is not only central to our commercial success but crucial to ensuring that our mines act as a catalyst for genuinely sustainable development.

Protecting and empowering our workforce

It was no surprise that, in our 2013 materiality assessment, ‘safety’ was selected as the most pressing sustainability issue by both internal and external stakeholders. It sits alongside the need to maximize local and national employment, the need to develop skills to meet the demands of the organization and the need to protect workers from occupational hazards – as a key set of human capital risks we must manage.

Simply put, our business depends on the skills and passion of our workforce so these issues are our top priority. We aim to create an engaged and motivated team led by host country nationals and with each individual taking responsibility for delivering our business goals and a safe environment. We believe that all occupational injuries and fatalities can and should be prevented and we work towards that target.

Our workforce

Randgold mines created employment for a total of 11,822 people in 2014 of which 91% were nationals from our host countries of operation.

The total workforce of 11,822 is a significant contraction from over 15,000 persons in 2013. This reflects the conclusion of the major construction phase of the Kibali gold mine.

Hiring and upskilling host country nationals is central to Randgold’s human resources approach. Competent management is arguably the biggest business asset for any gold mine and by recruiting outstanding candidates from host countries and training local people to world-class standards, we develop cost effective, accountable management that deliver highly productive gold mines.

Our target in this area is to maximize the number of host country nationals in senior roles. In 2014, it was therefore an important achievement that 91% of our mining workforce were nationals and that localization efforts moved forward at mines such as Loulo and Tongon.

At Loulo, expatriate numbers were reduced by 10% and all but one of the entire management team is now Malian. In total, nine senior international employees were replaced by trained nationals in 2014. This is a relatively low number but is an indicator that we hope to increase over the medium term reflecting the time needed to transition skilled senior workers.

In terms of gender diversity, Randgold is an equal opportunity employer. We have transparent nondiscrimination policies and strive to employ the best people at each site, especially from local communities.

- 64 -

Table of Contents

Safety as our top concern

Sustainability begins at home and Randgold's primary commitment is to the safety of its employees. We have a wide range of measures in place across all our mines to protect employees in all parts of our operations.

We view safety as a continuous and constant program of work and every day our employees meet for "toolbox" morning sessions on safety, engage in regular safety training, check personal protective equipment and are encouraged to speak out should they see any risks not being dealt with appropriately.

We take a preventative approach to safety and use the internationally recognized OSHAS 180001 standard as framework for our health and safety management. In 2014, all our mines were certified to the OHSAS 18001 standard with the exception of Kibali which will, as a newly operational mine, be applying for its accreditation in due course. Our policy is to combine both the top-down approach that flows from constant supervision and the bottom-up approach of asking every individual employee to be their 'brother's keeper' i.e. to take responsibility for the safety of themselves and those around them. Other measures include, but are not limited to, the wide use of signage in multiple languages, the use of rotating monthly safety themes and a fast response protocol for when a LTI occurs that can include safety stand downs, the issuing of flash reports and detailed analysis by supervisors.

We were pleased to record an 18% reduction in our LTIFR for 2014, reducing the rate for the third year in succession to a historic low. This is particularly gratifying at a time when the scale and complexity of our operations continues to grow, including reaching the highest level of production in our history.

At group level, LTIs were reduced to 13 this year, a reduction of 35% on 2013, and a decrease of 65% on 2012. The teams at Tongon and Goukoto both achieved zero LTIs throughout 2014 and there have been significant improvements at Kibali with a 50% reduction in the number of LTIs compared to 2013.

We also seek to introduce new technology where it has been shown to add proven and tangible benefits for the safety of our workforce. In 2014 we upgraded the ventilation systems to improve temperatures underground.

2014 Safety performance

2014	2013	2012
------	------	------

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Total labor ²	12,341	15,373	¹ 11,990	¹

1. Restated from last year due to slightly updated recalculation.

2. Including persons employed by our contractors.

3. Defined as injuries that occur in the execution of duties that mean the person is unable to perform those duties for at least one day.

4. Number of LTIs per million man hours worked.

Training

We are constantly investing in training to improve the performance of our employees so that Randgold meets its business goals. With such a large number of employees coming from local communities, many of whom had never worked in the sector before, training is central to our working culture. We use psychometric testing to identify local people with the aptitude for skilled positions and then require each worker to learn their position through shadowing a mentor, often on one of our other mines. Such informal training continues until a line manager certifies them to be able to undertake the role to the required standards themselves.

To help develop the leaders of tomorrow, we also invest informal training for our most talented employees, including courses and diplomas at leading international universities. In 2014, a total of 210 employees received formal training at a total investment cost of \$543,225.

Table of Contents

Industrial relations

Our employees are a core stakeholder in our business and that belief forms the cornerstone of our industrial relations policies. All employees are free to join unions and our countries of operation are strongly unionized with the right to freedom of association enshrined in law.

We estimate that approximately 85% of our employees are union members with the remaining 15% set apart due to a long term incentive program we introduced for senior employees. This program effectively moves participating employees into management and out of the employee side of negotiated work conditions.

We recognize all groups that legitimately speak for our workers and meet with union representatives at each mine site on a monthly basis; they also attend quarterly board meetings. There are also other initiatives such as the general manager's weekly safety meetings to encourage open and constant dialogue.

Our strategy of continuous meetings with worker representatives, sub-contractor management and all stakeholders continued to drive a calm industrial relations climate in 2014.

In Mali, there were numerous calls from unions in other sectors in the country for the Mali mines to join them in sympathy strikes but there was only one occasion when they agreed to - at Morila, when less than 15% of the workforce followed the strike for two days.

There was also one industrial relations stoppage at Tongon in the second quarter when our mining subcontractor TOMI experienced a wild-cat five-day strike without warning.

In total, 11 days' work were lost to strike action over the course of the year across the whole group.

Mine Level Agreements (MLAs) are the basis of our industrial relations policy. These are collective agreements with the unions at each mine. They are designed to complement national labor laws and to establish the way each mine operates with regards to detailed items such as salary increments or acceptable behavior in a strike situation. MLAs are reviewed every three years, and no MLAs were due for review in 2014.

Managing health risks

Our mines are located in isolated parts of Africa where access to basic healthcare tends to be extremely limited and where infectious diseases can create significant human and business risks. That is why health issues, such as malaria and HIV/AIDS, appeared prominently in our materiality assessment in 2013. We believe that a healthy workforce and the security of knowing their immediate family are healthy are critical to the productivity and functioning of our mines.

Access to healthcare

As part of our sustainability policies, we provide free basic medical services to employees, their immediate family and to community members within a 10km radius of each of our mines. Our policy is to establish health clinics both on the mine and in nearby villages, with the aim of the latter being to transfer control to local authority over the medium-term. In 2014, the community clinic in Kibali was transferred to the provincial authority. In 2014, we operated seven clinics across our five mines and their communities. This resulted in just over 100,000 medical consultations of which around 70% were for employees. The total number of consultations is down slightly on last year, reflecting the contraction in the size of the workforce as a whole.

Net benefits in our fight against malaria

As well as our core provision of basic healthcare, Randgold also runs a focused program at each of our mine sites to combat malaria. This disease kills around 25,000 people in our three countries of operation each year but it is preventable and we are glad to report zero deaths from the disease among our host communities in 2014.

We believe that the battle against the disease is one of our best investments. Over 4,000 sick leave days were recorded due to malaria in 2014 – around 28% of total absenteeism – and reducing these losses helps make a strong business case for our anti-malaria program. More than this, however, we also find that the productivity and morale of our workforce is boosted enormously when they know that they, their family and friends need not live in fear of this disease.

The total number of malaria cases across the group reduced from 8,102 in 2013, to 6,163 in 2014 – a reduction of 24%. This brought group level malaria incidence below 50% for the first time, and puts incidence at all mines at least 30% below the initial baselines set before the mine started. While this is encouraging, it does not meet our ambitious target to reduce incidence of the disease by 25% year-on-year and we were disappointed by slight increases in the rate at both Kibali and Morila.

Helping prevent and live with HIV/AIDS

HIV/AIDS is widespread across sub-Saharan Africa, particularly in the DRC. Our HIV/AIDS program aims to help stop the spread of the disease by encouraging safe sex, raising awareness and promoting VCT.

- 66 -

Table of Contents

The target for our HIV program is no new infections among our employees.

In 2014, we spent over \$27,000 on our HIV/AIDS program. Among other measures, this helped to enable the distribution of over 161,000 condoms, funded mobile video education units in the communities and AIDS awareness month in December, and supported training for peer educators. Our peer educators are members of the community, including employees and sex workers, who are trained in counseling about HIV and communicating the risks and tend to have more resonance with their peers than others can.

It was very encouraging that the number of employees and sub-contractors tested for HIV on a voluntary basis at our mine clinics rose by 10% in 2014, rising to 3,207 people in 2014, from 2,908 in 2013. This is important because early awareness of the disease helps to arrest its spread and makes treatments generally more effective.

We were disappointed by a slight increase in the HIV prevalence rate in 2014 and in the number of positive cases among employees – which rose from 95 in 2013 to 109 in 2014. However, it is encouraging to see the prevalence rate at Kibali drop after an increase last year and that, at 11.3%, it is now some way below the baseline recorded in 2010.

Occupational health

The business of gold mining presents a number of health hazards and we undertake a wide range of healthcare programs to fit the specific circumstances of each department and operation.

At group level, there were 27 new cases of occupational health conditions in 2014. These were all related to hearing impairments and all from two specific sites, Tongon (9) and Loulo (18).

Our occupational health work aims to both reduce exposure to risks and to pro-actively spot potential health issues through regular medical consultations for employees. These consultations monitor for issues such as heavy metal in the blood, silicosis, tuberculosis and hearing issues and include biological and radiation testing for those departments with exposure to chemicals or other hazards. Our employees must all pass minimum fitness standards.

Each workplace undertakes a risk assessment to identify occupational health issues and we use appropriate equipment and engineering controls to minimize risk. All staff are provided with relevant personal protective equipment from high visibility vests, safety glasses, and ear defenders to helmets and safety boots. Our occupational health processes

are certified against the OHSAS 18001 health and safety standards.

First aid training is also regularly provided and our underground projects have two specially trained mine rescue teams on site with specialist equipment.

We also seek to use the latest technology where possible and improvements to equipment in 2014 have included the introduction of quieter fans to reduce the risk of industrial deafness.

Environmental management

Our policies and performance

The focus of our environmental practices on each mine is defined by the detailed environmental impact assessment that we conduct at the feasibility phase of any project. This sets a baseline for our understanding of environmental risks and defines our approach to energy, water, waste and biodiversity management.

Once the mine is operational these findings become the basis of an EMS that is drawn up in line with IFC Performance Standards, national regulations and local community input. Ultimately, our aim is to keep our negative environmental impact to a minimum and to ensure we do not leave any long term environmental liabilities.

All our sites, with the exception of the newly-opened Kibali, are ISO 14001 certified, which helps us to identify and deal with any environmental risks and thereby comply with international best practice. We also conduct independent audits to check our compliance with the IFC Performance Standards. We had no significant environmental fines or non-monetary sanctions in 2014 and Morila's ISO certification was reviewed and recertified.

Our environmental management systems track three types of environmental incidents ranging from major class 1 incidents (such as incidents resulting in destruction of community property), to moderate (class 2) and more minor class 3 incidents (such as release of effluents within the boundary fence).

In 2014, there was one major and 20 moderate environmental incidents across the group. This was the first class 1 incident in three years. The incident occurred at Tongon in December 2014 when a tailings pipeline burst and, although initially contained in a small dam, was accidentally pumped into a diversion trench linked to the river. While the leaked slurry was contained in the dam it was treated with an iron sulphate, to neutralize chemicals such as

cyanide. However, the incident caused the death of some fish and required remedial action to be taken including water sampling to test levels of sulphates and toxins in the local water supply and information and awareness sessions with communities downstream and along the river. A formal report was submitted to the minister

- 67 -

Table of Contents

of mines in Côte d'Ivoire who also undertook their own investigation as is the standard for such incidents. We will continue to monitor closely for any negative effects in 2015.

In 2014, the Kibali ESIA was updated to include new satellite pits. This entailed completing numerous specialist studies as well as public consultation, all of which was in line with IFC standards.

Energy use and greenhouse gas emissions

Gold mining is an energy intensive operation but we strive to reduce our energy use using measures that are appropriate for each site. For example, at Kibali there is an abundance of water so we are working to maximize use of hydropower; while in Tongon most of our energy savings come from connections to the national grid. We also seek to instigate energy efficiency measures at all operations.

Environmental Incidents	Class 1 ¹			Class 2 ²			Class 3 ³		
	2014	2013	2012	2014	2013	2012	2014	2013	2012
Loulo	-	-	-	10	8	5	47	61	63
Goukoto	-	-	-	-	-	2	21	22	18
Morila	-	-	-	-	-	-	1	2	2
Tongon	1	-	-	1	4	2	10	18	29
Kibali	-	-	-	9	5	1	17	24	15
Total	1	-	-	20	17	10	96	128	127

1. Major incident resulting in death or injury or destruction of community property or husbandry.

2. Medium incident involving material disruption to production or uncontrolled release of contaminated effluent outside the boundary fence of the operation.

3. Minor incident involving controlled or uncontrolled release of effluent or pollutants within the boundary of the operation.

Overall, our energy usage across the group this year was 764,140MW, an increase of around 30% on our 2013 usage and reflecting the increase in production levels. Encouragingly, our energy efficiency improved from 44.5kWh/tonne for each tonne of ore milled in 2013 to 37.4kWh/tonne ore milled, meaning we used around 4% less energy for each tonne milled.

Some of the biggest increases in energy use in the early part of 2014 were at our Loulo mine and, towards the end of the year, we commissioned an independent audit into power efficiency at the site to identify where energy could be better managed. This resulted in a number of innovations for power saving that are now being implemented including running the CAT machines and spinning reserves at more optimum levels, improving underground efficiency by installing a single pump and by stopping the underground conveyors running continuously. By the end of 2014, the overall milling system at Loulo had already observed significant improvements in power efficiency.

One of the highlights of 2014 in this area was the bringing online of the Nzoro 2 hydropower station at Kibali. Our increased use of hydropower last year has been one of the contributing factors in our improvements in emission intensity from 50.47 tonnes CO₂-e/kt milled in 2013 to 42.43 tonnes of CO₂-e/kt milled in 2014. Also in 2014, solar panels were introduced at Loulo to generate power for the offices and administrative buildings. In 2015, we may consider commissioning feasibility studies into where further use of renewables may be viable, especially in Mali where return on investment is likely to be highest.

Water management

Our individual operations develop site-based action plans on water management due to the variations in climate in each country. In Mali and Côte d'Ivoire, which are prone to drought, security of water supply and efficient use of water are our most critical concerns whereas our Kibali mine receives nearly two meters of rainfall each year so does not have such issues around security of supply.

The amount of water that we take from freshwater sources such as rivers is governed by permit restrictions set by the relevant, governing authority.

At the center of our water management policy is our ambitious group target to recycle 85% of process water. Water recycling helps to reduce overheads, ensures security of supply in drought prone areas and mitigates the potential of environmental incidents. It also reduces energy use as less electricity is needed to pump from freshwater sources.

Our water recycling levels reached 75% in 2014. Although this total did not meet our group target, it was still a relatively high level of recycling. Water saving measures that helped achieve this figure included measures to maximize return water from tailings dams and the creation of water champions in some teams. The commissioning of Kibali's TSF was a big factor in lowering levels of return water recycling in 2014, as the return water line was only operational some six months after the commissioning of the TSF. With this now in place we are confident of achieving the group recycling target of 85% in 2015. Efforts at Loulo were also

Table of Contents

notable in 2014 as improvements in water efficiency there reduced abstraction from Mali's Falémé River by around one million cubic meters, the equivalent of 13 million bath tubs of water.

Water monitoring

We regularly monitor surface and groundwater quality and test drinking water on and off site for the risk of water pollution. In line with international standards and local legislation, we test for over 30 chemical elements including various heavy metals, cyanide and arsenic. In the DRC, a government agency conducts an independent audit of our monitoring processes every two years.

There are also regular checks and reinforcements made to our TSFs where the waste products from our processing plant are deposited. An independent auditor regularly checks the management of these facilities. This year we took remedial action at Loulo when a borehole near the TSF showed elevated levels of iron and sulphates. We have commissioned a survey to look carefully at what the source of this pollution might be and to present the best options to deal with it including updating the TSF model. This will be enacted in early 2015.

A new innovation that is being piloted at Loulo in 2014 has been to introduce a wetlands system below the water treatment plant for underground water. The wetlands remove sediments and pollutants such as nitrates from the water. Nitrates can appear in the water system due to residue from the use of explosives, however the wetlands feed on them, using them as nutrients and removing them from the water cycle.

Waste and cyanide management

We have site-specific waste management plans in place at each site covering the variety of wastes that we produce including organic, inorganic and hazardous materials. Each plan details how each type of material should be handled, stored, separated, recycled or disposed of. We strive to recycle and reuse waste wherever possible and to ensure all materials are dispatched safely.

When required, we bring in outside expertise such as using geotechnical engineers to ensure that waste rock dumps are stable with correctly angled slopes. Arguably the most important part of our waste management is the handling of hazardous waste including acids, chemicals and, in particular, cyanide.

In 2013, we reviewed our cyanide management and introduced a new internal cyanide code to ensure we are aligned with international best practice for its production, transportation, storage and use. This includes conducting annual cyanide audits at each site.

In 2014, we continued to ensure that all staff are trained in our new cyanide standard, including extra training and supervision for those transporting cyanide and burning waste packaging and increasing the frequency of monitoring at tailings dams.

Protecting biodiversity

Our mines have a major impact on the flora and fauna present on the original sites but we go to great lengths to minimize our negative effects and to repair damage done wherever possible. No habitats of any endangered species are affected by Randgold mines.

Detailed records of the full range of biodiversity present on a site are taken during the initial ESIA's on any project and each site has a large and detailed biodiversity action plan, detailing various habitats across the site to help restore our sites to match the original ecosystems as much as possible.

Land restoration is an on-going process and we are continually working to replant indigenous plants throughout the life of the mine.

Dust Management

Management of ambient air quality, and in particular the suppression of dust, is an important part of our environmental policy. Most of our countries of operation are dusty, particularly during the dry season, and many of the processes of mining such as blasting, dumping and crushing can combine with this climate to create significant amounts of dust.

Throughout 2014, Kibali, Morila and Tongon mines recorded low to moderate dust levels at all monitoring stations. However, dust management around our Loulo and Goukoto mines (and particularly on the Loulo- Goukoto service road) has been a particular area of focus for us in 2014 as monitoring stations returned dust levels in excess of the 500mg/m²/day level set as high by IFC guidelines.

In response to the high dust levels around Loulo-Goukoto, we have run a pilot program trialing the application of different substances including polymers, molasses and bitumen to roads to consider which is most effective. Results will be analyzed and the most effective dust suppression method rolled out in 2015.

Workers in areas such as the pit, which are inevitably very dusty due to the nature of the processes taking place, are provided with personal protective equipment to protect their eyes and lungs and receive regular medical checks and if necessary to allow for appropriate action taken.

- 69 -

Table of Contents

Throughout November and December 2014 Randgold undertook an exercise to update and build on its materiality assessment, and so understand which sustainability issues might need to be prioritized in 2015.

Our process

To carry out the update to our materiality assessment we presented both internal and external stakeholders with a long list of over 40 potential sustainability topics and asked them to score the potential impact on Randgold's business of each of these issues.

For internal stakeholders, we asked heads of key departments and the executive management team to update their assessment of the priority issues for the business, discounting last year's results. For external stakeholders, we combined survey responses from 2013 with an additional set of external stakeholders that were approached for the first time this year. The complete group of over 100 external stakeholders included local and regional authorities, local businesses, external contractors, staff, worker's unions and police.

The results were reviewed and agreed internally by Randgold management to ensure they provided balanced coverage of the company's most material issues wherever they occur in the value chain.

Our emerging findings

The results of the update to our materiality assessment showed that 80% of our highest-impact issues remained in this top category, but there were also some notable movement around which issues both internal and external stakeholders placed in their top third of priorities.

Among internal stakeholders, the top two issues of 'safety' and 'cyanide management' remained the same as in 2013 but the issues of 'water pollution', 'corporate governance' and 'community grievance resolution' all rose considerably up the internal priority list to complete the top five in 2014.

Among external stakeholders, the top three issues ('safety', 'community engagement' and 'community investment') all remained the same. Below that there were eleven issues that moved between five and ten places in the priority list. The fastest rising issue among external stakeholders in 2014 was 'artisanal mining', which rose eleven places and entered the top third of priorities for external stakeholders.

One of the most useful outcomes of the materiality assessment exercise is that it helps the Randgold team to identify where gaps in perception exist between internal and external stakeholders. The 2014 results showed nine issues where comparative rankings showed a difference of 15 places or more. These included issues such as ‘HIV/AIDS’, ‘corporate governance’ and ‘bribery and corruption’ where a gap of over 20 places existed between the internal and external rankings.

The Randgold team will work to address these gaps in 2015 and ensure that the issues of importance to each group are adequately attended to.

Priority issues

In order to draw a threshold for our reporting, we set boundaries to identify ‘high’ and ‘medium’ impact issues. We define high impact issues as those that appear in both internal and external stakeholders’ top 10 most important issues, while medium impact issues are defined as those appearing in the top 3rd (13) of either internal or external stakeholder lists.

As listed below, the 2014 assessment showed four ‘high priority’ issues and 16 medium-impact issues. This compares to five high impact issues in 2013 - ‘local and national employment’ being the issue that slips back. The results also introduced five new issues within the medium impact category, these are: ‘air pollution’, ‘artisanal mining’, community grievance mechanism’, ‘corporate governance’ and ‘indigenous populations’.

There are also three issues that dropped below this medium impact line in 2014 they were: ‘resettlement’, ‘energy use & efficiency’, and ‘local procurement & partner development’.

High impact issues:

§	Safety
§	Cyanide management
§	Community engagement
§	Water pollution

Medium impact issues:

§	Air pollution
§	Artisanal mining
§	Bribery and corruption
§	Community development and investment
§	Community grievance mechanism

Table of Contents

MARKETING

We derive the majority of our income from the sale of gold produced by Morila, Loulo, Goukoto, Tongon and Kibali in the form of doré, which we sell under agreement to a refinery. Under these agreements, we receive the ruling gold price on the day after dispatch, less refining and freight costs, for the gold content of the doré gold. We have only one customer with whom we have an agreement to sell all of our gold production. The “customer” is chosen periodically on a tender basis from a selected pool of accredited refineries and international banks to ensure competitive refining and freight costs. Unlike other precious metal producers, gold mines do not compete to sell their product given that the price is not controlled by the producers.

PROPERTY

Our active mining areas comprise of the Morila mining permit of 200km², the Loulo mining permit of 263km², the Goukoto mining permit of 100km², the Tongon mine located within the 751km² Nielle exploitation permit and the Kibali mine located within the 10 mining permits which make up the Kibali mine and cover 1,836km². Our exploration permits are described under the subheading “Mineral Rights and Permits” in this report.

We also lease offices in Abidjan, Côte d’Ivoire; Bamako, Mali; Dakar, Senegal; Entebbe, Uganda; St. Helier, Jersey; Johannesburg, South Africa; Kinshasa, DRC; and London, United Kingdom.

LEGAL PROCEEDINGS

As at December 31, 2014, the group had received claims for various taxes from the State of Mali totaling \$313.0 million, in particular with respect to the Loulo, Goukoto and Morila mines. The claims have increased by \$190.0 million in the year, substantially representing \$201.3 million of additional claims received in respect of Loulo and Goukoto following the tax audits during the year, offset by foreign exchange movements. Having taken professional advice, the group considers the material claims to be without foundation and is strongly defending its position, including following the appropriate legal process for such disputes in Mali. Loulo, Goukoto and Morila have legally binding Establishment Conventions which guarantee fiscal stability, govern the taxes applicable for the companies and allow for international arbitration in the event that a dispute cannot be resolved in the country. On November 25, 2013, Loulo instigated arbitration proceedings against the State of Mali pursuant to the terms of Loulo's Establishment Convention at the International Center for Settlement of Investment Disputes in respect of \$57 million of claims. Management continues to engage with the Malian authorities at the highest level to resolve this issue and the other unresolved tax claims. The arbitration process is ongoing, with hearings being held in the first quarter of 2015. The outcome of the process is expected to be concluded during 2015. However, it may be necessary to instigate additional arbitration proceedings to resolve these disputes.

Other than as disclosed above we are not party to any material legal or arbitration proceedings, nor is any of our property the subject of pending material legal proceedings.

HEALTH AND SAFETY REGULATIONS

Mali

The primary laws, regulations and standards governing Safety and Health in our Malian operations are as follows:

• Law 1992-020 Code du travail (the Labor Code);

• Ordonnance No. 99-032 le code minier, Ordonnance 200-013 le code minier modifications 2000 (the Mining Code);

• Decree No. 91-278 / PM-RM Approving the Establishment Agreement Covering Research and Mining in the Republic of Mali (the Decree);

Table of Contents

Code de la Sécurité (INPS—Institut National de Prévoyance Sociale);

Sécurité Sociale du Mali (Social Security Code); and

Convention Collective (National Collective Agreement for the Mining Industry).

Labor Code

The Labor Code provides generally for the following:

General provision for protection, prevention and hygiene;

Dangerous goods handling;

Employer responsibility regarding safety and health (implementation of safety system);

Labor inspector duty (control of employer safety system);

Injury notification to Labor Inspector within 48 hours;

Requirement to ensure medical service on site;

Medical leave (up to 12 months) and medical separation compensation; and

Establishment of a Joint Management and employees health and safety committee.

Mining Code

The Mining Code provides generally for an Occupational Health and Safety Committee (Joint management and employee safety committee), Personal Protective Equipment or PPE, safety guide, emergency procedure, means of education and sensitization, employees obligation regarding occupational health.

The Decree

The Decree provides generally for the following:

- Must carry out research or mining work to ensure the safety and health of the public;

Must inform the local administrative authorities and the Director in the event of a fatal accident or serious injury or any natural phenomenon which may have an adverse effect on the safety of the area, the safety and hygiene of the personnel or conservation of the mine, neighboring mines or public roads; and

In the case of imminent danger or an accident, the local administrative authorities and the Director may requisition the necessary material and personnel to alleviate the danger, at the expense of the mining company.

Code de la Sécurité (INPS – Institut National de Prévoyance Sociale)

The Code de la Sécurité provides generally for the following:

Requirement to have medical service on work site for occupational health and primary health care purposes;

Requirement for pre-employment medical check;

Requirement for periodical medical check of employees;

Requirement for general hygiene (ablutions, change house, potable water, workplace);

Protection against injury, environmental pollutants, occupational disease);

Ergonomic conditions;

Notification of occupational disease to the employer by the occupational health practitioner;

Requirement for first aid training for one employee per section of work or shift;

Requirement for compensation in case of debilitating injury, occupational disease;

Requirement for notifying injury and or occupational disease to INPS/Labor inspection; and

Redeployment of employee following injury and/or occupational disease.

Morila, Loulo and Goukoto have a Hygiene and Security Committee made up of elected labor and specialist management representatives, as outlined in the respective labor code. This committee designates, from its members, a consultative technical sub-

- 72 -

Table of Contents

committee charged with the elaboration and application of a concerted policy of improvement of health and security conditions at work. Its composition, attributions and operational modalities are determined by legal provisions and regulations.

The chairman of this committee coordinates monthly committee meetings, sets the agendas with his secretariat, monitors resolutions and signs off on committee determinations.

The committee's secretariat ensures under the supervision of the chairman that:

- follow-up activities such as action resulting from the regular surveys and inspections are carried out; and

health and safety manuals and updates are distributed, posters are posted on notice boards and safety committee minutes and reports are distributed.

Each mine's medical officer sits on the Hygiene and Security Committee and advises on the following:

• working conditions improvements;

• general hygiene on the operation;

• ergonomics;

• protection of workers safety in the workplace; and

• medical checks and eye and ear testing.

The Hygiene and Security Committee forms, from within its membership, two consultative commissions, the Commission of Inquiry and the Educational Commission. The Commission of Inquiry:

• investigates accidents and makes recommendations to avoid repetitions;

ensures plant, machinery and equipment have adequate protection to avoid injury; and

updates and revises safety and health manuals.

The Educational Commission:

- provides information and training on safe practices and potential risks;

provides first aid training;

administers and promotes the safety suggestion scheme; and

explains, where necessary, the contents of the safety and health manual.

All employees are covered by the state's social security scheme and our medical reimbursement scheme, that reimburses a large portion of expenses related to medical treatment and medicines. Dental and optical expenses are also covered to 50%.

No post-employment medical aid liability exists for the group.

Côte d'Ivoire

The primary laws, regulations and standards governing Safety and Health in our Côte d'Ivoire operations is the Mining Code (95-553) of July 15, 1995.

The Mining Code provides generally for the following:

• Any individual or legal entity carrying out works for prospecting or mining mineral substances is required to undertake such works in a way that the safety of the people and goods is assured;

•

Must adopt and comply with internal regulations concerning safety and specific hygiene measures, subject to approval by the Mining Authority;

• Any accident in a mine or quarry or in their dependencies and any identified cause of accident must be reported to the Mining Authority as soon as possible; and

In case of impending danger or accident in a mine, mining engineers and other authorized agents of the Mining Authority must take all necessary measures, at the expense of the individual or legal entity, to stop the danger and prevent it from occurring again.

Table of Contents

DRC

The Mining Code, Law No. 007/2002 signed into law on July 11, 2002, and its ancillary Mining Regulation, adopted in 2003, is the primary statute forming the legal basis for mining activities in the DRC. Articles relating to social and environmental impact studies are listed below:

Key Environmental Legislation in the DRC by aspect General environment

• Arrêté Ministériel No. 043 of December 8, 2006 and No. 08 of April 3, 2007

• Ordinance No. 07/018 of May 16, 2007

Soils and land use

• Article 28 (Topography, Geology and Land Use) from Chapter II of Schedule IX, Mining Regulations, Decree No. 038/2003 of March 26, 2003

• Article 75 (Dead Ground Management) of Chapter V of Schedule IX, Mining Regulations, Decree No. 038 / 2003 of March 26, 2003

Water

• Decree of May 6, 1952 on water

• Ordinance 52-443 of December 21, 1952

• Regulation on lake and watercourse contamination and pollution of July 1, 1914

• Article 30 to 33 from Chapter II of Schedule IX, Mining Regulations, Decree No. 038 / 2003 of March 26, 2003

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

- Articles 53 to 74 of Schedule IX of the Mining Regulations, Decree No. 038 / 2003 of March 26, 2003

Climate and air quality

Article 29 (Climate and Air Quality) of Schedule IX of the Mining Regulations, Decree No. 038 / 2003 of March 26, 2003

- Articles 49 to 52 of Schedule IX of the Mining Regulations, Decree No. 038 / 2003 of March 26, 2003

Biodiversity and protected areas

- Forest Code (Law 011 2002 of 28 May 2002)
- Regulation No. 69-041 of 22 August 1969
- Regulation No. 79-244 of 16 October 1997 (Amended 1995 and 1996)
- Law No. 75-023 of July 22, 1975 and Regulation No. 78-190 of May 5, 1978

Articles 34 to 37 (Biological Environment) of Schedule IX of the Mining Regulations, Decree No. 038 / 2003 of March 26, 2003

- Schedule XII of the Mining Regulations, Decree no. 038 / 2003 of March 26, 2003

Noise and vibrations

- Schedule XIII of the Mining Regulations, Articles 1 to 6
- Articles 46 to 48 from Chapter II of Schedule IX, Mining Regulations, Decree No. 038/2003 of March 26, 2003

Cultural heritage

- Ordinance 70-089 of 11 March 1970

- Ordinance 71-016 of 15 March 1971

- Article 46 of the Constitution of the DRC of February 18, 2006

- Articles 205 and 206 of the Mining Code and Regulations

Resettlement

Code Foncier Immobilier et Régime des Sûretés, April 5, 2006

Artisanal mining

Articles 223, 224, 232, 233, 416, 417 and 575 of the Mining Regulations, Decree No. 038/2003 of March 26, 2004

Table of Contents

Mining code

Mining articles which were taken into account for the Kibali mining project include the following:

- Article 15 of the DRC Mining Code confers the responsibility on the Department in charge of Protection of the Environment, within the Ministry of Mines, in conjunction with other government departments, of environmental protection including the technical evaluation of the EIS and EMP of the project and the Mitigation and Rehabilitation Plan (MRP). The Mining Code is supported by the mining regulations.

Article 42 requires that, and provides the framework within which, the EIS and EMP for a new mining right is evaluated.

Article 50 defines the scope of a mineral exploration license. The undertaking of exploitation activities on an exploration permit is prohibited. The holder of an exploration license, however, has the exclusive right to apply for the conversion to an exploitation license during the validity period of the exploration license.

Article 69 requires that an applicant for an exploitation permit submits an EIS and EMP for the project and approval of said documents are required for granting of the exploitation license in terms of article 71.

Article 277 regulates works required between adjacent mines, and should such works be required, the title owners cannot object to them and payment of costs will be pro-rata.

Article 279 stipulates the restrictions on the occupation of land and requires consent before any area within 180m from temporary or permanently occupied buildings, 45m from ploughed land and 90m from land used for breeding cattle or with a reservoir; dam or private water reserve is occupied.

- Compensation for use of the land is regulated by articles 280 and 281.
- Article 283 determines the authorized activities within the exploitation right and adjacent areas.

Article 294 allows for the confiscation of the provision for rehabilitation by the court should the owner fail to adhere to the provisions of the EMPP at completion of the exploitation works.

Safety Performance

Officials from the Labour Ministry, INPS and officials from the Ministry of Mines regularly visit and audit our operations. Both Morila and Loulo have received safety awards and commendations from INPS.

The national statistics in the countries of West Africa in which we operate are not generally available, with only fatalities cases and lost time/compensable injuries being reported.

Our safety programs are based on the outcome of the risk assessment and continual improvement strategy. The statistical measures we use to monitor our performance, such as LTIFR, are based on international good practice (OHSAS 18001) which we believe is the most accepted by our peers and best standard specification for such statistics.

We are progressing with the implementation of occupational health and safety assessment series OHSAS 18001 at all of our operations as part of our health and safety strategy to continuously improve safety in our operations. All our mines are now certified to OHSAS 18001 standard with the exception of Kibali which became operational in 2013 and will apply for its certification in 2016.

See “Social Responsibility and Environmental Sustainability.”

C. ORGANIZATIONAL STRUCTURE

D. PROPERTY, PLANT AND EQUIPMENT

For a discussion of our principal properties, including mining rights and permits, see “PART I. Item 4. Information on the Company – A. History and Development of the Company” and “PART I. Item 4. Information on the Company – B. Business Overview”. We have all material legal rights necessary to entitle us to exploit such deposits over the remaining life of mines which are estimated in respect of Morila in Mali to 2017, Loulo in Mali to 2028, Tongon in Côte d'Ivoire to 2020, Goukoto in Mali to 2025 and Kibali in DRC to 2031.

The exploration permits in Côte d'Ivoire, Mali, Senegal, Burkina Faso and DRC give us the exclusive right for a fixed time period, which is open to renewal, to prospect on the permit area.

Once a discovery is made, we, as the permit holder, then commence negotiations with the respective governments as to the terms of the exploration or mining concession. Depending on the country, some of the terms are more open to negotiation than others, but the critical areas which can be agreed to are the government's interest in the mine, taxation rates and taxation holidays, repatriation of profits and the employment of expatriates and local labor.

Item 4A. Unresolved Staff Comments

None.

- 77 -

Table of Contents

Item 5. Operating and Financial Review and Prospects

Statements in this Annual Report concerning our business outlook or future economic performance; anticipated revenues, expenses or other financial items; and statements concerning assumptions made or expectations as to any future events, conditions, performance or other matters, are “forward-looking statements” as that term is defined under the United States Federal securities laws. Forward-looking statements are subject to risks, uncertainties and other factors which could cause actual results to differ materially from those stated in such statements. Factors that could cause or contribute to such differences include, but are not limited to, those set forth under “PART I. Item 3. Key Information – D. Risk Factors” in this Annual Report as well as those discussed elsewhere in this Annual Report and in our other filings with the Securities and Exchange Commission.

General

We earn substantially all of our revenues in US dollars and a large proportion of our costs are denominated or based in US dollars. We also have Euro, Communauté Financière Africaine franc and Pound Sterling denominated costs, which are primarily wages and material purchases. A large portion of our capital commitments for 2015 are denominated in South African Rand and Euros and relate to the Loulo-Goukoto complex and Kibali.

Impact of Malian, Côte d’Ivoire and DRC Economic and Political Environment

We are a Jersey incorporated company and are subject to income tax at a rate of zero percent in Jersey. However, our current significant operations are located in Mali, Côte d’Ivoire and the DRC and are therefore subject to various economic, fiscal, monetary and political policies and factors that affect companies operating in Mali, Côte d’Ivoire and the DRC as discussed under “PART I. Item 3. Key Information – D. Risk Factors – Risks Relating to Our Operations.”

Impact of Favorable Tax Treaties

We are subject to corporate tax at a rate of zero percent in Jersey. Loulo benefited from a five year tax holiday until November 7, 2010. Tongon also benefits from a five year tax holiday in Côte d’Ivoire which commenced on December 1, 2010. The Goukoto convention was signed in March 2012. In terms of this convention Goukoto benefitted from an initial corporate tax exoneration of two years which expired in June 2013, with an opportunity to extend this to five years in the event of further investment such as an underground mine as discussed under “PART I. Item 3. Key Information – D. Risk Factors – Risks Relating to Our Operations”. The benefit of the tax holidays to the group was to increase its net profit by \$8.0 million, \$31.3 million and \$110.5 million for the years ended

December 31, 2014, 2013 and 2012, respectively.

Under Malian tax law, income tax is based on the greater of 30% of taxable income or 0.75% of gross revenue. Under Ivorian tax law, income tax is based on the greater of 25% of taxable income or 0.5% of gross revenue.

The Loulo, Tongon and Goukoto operations have no assessable capital expenditure carry forwards or assessable tax losses, as at December 31, 2014, 2013 and 2012 respectively, for deduction against future mining income. The group's share of profits from equity accounted joint ventures is stated net of \$20.9 million (2013: \$7.4 million; 2012: \$20.5 million) of current and deferred tax charges primarily in respect of Kibali and Morila. The share of profits from the Kibali joint venture is stated after deferred tax that was calculated at 30% of profit, notwithstanding the mine has an accelerated tax allowance which reduces the cash tax paid in the current year.

Revenues

Substantially all of our revenues are derived from the sale of gold. As a result, our operating results are directly related to the price of gold. Historically, the price of gold has fluctuated widely. The gold price is affected by numerous factors over which we have no control. See "PART I. Item 3. Key Information – D. Risk Factors – Risks Relating to Our Operations – The profitability of our operations, and the cash flows generated by our operations, are affected by changes in the market price for gold which in the past has fluctuated widely".

We have in previous years followed a hedging strategy the aim of which is to secure a minimum price which is sufficient to protect us in periods of significant capital expenditure and debt finance, while at the same time allowing significant exposure to the spot gold price.

Table of Contents

Significant changes in the price of gold over a sustained period of time may lead us to increase or decrease our production, which could have a material impact on our revenues.

Our Realized Gold Price

The following table sets out the average, high and low afternoon London Bullion Market fixing price of gold and our average US dollar realized gold price during the years ended December 31, 2014, 2013 and 2012.

	Year Ended December 31,		
	2014	2013	2012
Average	1,266	1,411	1,669
High	1,385	1,694	1,792
Low	1,142	1,192	1,540
Average realized gold price	1,264 ¹	1,376 ¹	1,652 ¹

¹. Our average realized gold price differs from the average gold price as a result of the timing of our gold deliveries for each year.

Costs and Expenses

Our operations currently comprise five operations. Mining operations at Loulo, Goukoto, Tongon, Kibali and, Morila are being conducted by contractors and managed by the company. Following a review of the underground mining activities at Loulo, the mine has take a decision in 2015 to take over the mining and development activities that were previously managed by the underground mining contractor. Milling operations are undertaken by the group's own employees. Total cash costs in the year ended December 31, 2014, as defined by guidance issued by the Gold Institute, made up approximately 77% of total costs and expenses and comprised mainly mining and milling costs, including labor and consumable stores costs. Consumable stores costs include diesel and reagent costs. Contractor costs represented 45 % of total cash costs, with diesel and reagent costs making up 20 % of total cash costs. Direct labor costs accounted for approximately 6 % of total cash costs. For a definition of total cash costs, please refer to "PART I. Item 3. – Key Information."

The price of diesel for the Loulo, Goukoto, Kibali, Morila, and Tongon operations decreased from 2013 to 2014. Should prices decrease further, this could significantly impact total cash costs mainly as a result of the high volume of

diesel consumed to generate power and to run the mining fleet. A significant portion of the costs at Loulo, Goukoto, Tongon and Morila are denominated in Communauté Financière Africaine Franc (CFA), which has a fixed exchange rate to the Euro. Therefore, costs are exposed to fluctuations in the Euro/dollar exchange rate. The Euro/dollar exchange rate was lower in 2014 compared to 2013. The remainder of our total costs and expenses consists primarily of amortization and depreciation, exploration costs, exchange losses, interest expense and general administration or corporate charges.

Looking Forward

The past year saw a big step-up in production across the group, resulting in an annual increase of 26%, in line with the guidance given at the start of the year, while total cash cost per ounce reduced, also in line with guidance. Looking ahead, the group continues to forecast an increasing production profile over the next four years. Production is expected to be relatively consistent across the year. Given Randgold's commitment to growing through discovery and development, the company will continue to commit significant expenditure to exploration, with corporate and exploration expenses of approximately \$60 million anticipated in 2015. Total group capital expenditure, including our attributable share of joint ventures, is expected to be approximately \$330 million. At Kibali, capital of approximately \$280 million (100% of project) is expected, mostly relating to the underground shaft developments and hydropower project. Ongoing development of the underground mines at Loulo, as well as other projects, is planned to cost \$150 million, while Goukoto is forecasting \$5 million, mostly on the underground mine development project. Capital at Tongon, including completion of the flotation circuit expansion, is estimated at \$20 million, and \$12 million is expected at Morila (100% of project), mostly on the TSF retreatment project. Continued work on the Massawa feasibility project is forecast to incur capital expenditure of approximately \$10 million. Randgold continues to maintain its focus on organic growth through the discovery and development of world class orebodies, and has a pipeline of high quality projects and exploration targets. Notwithstanding this core strategy, the company routinely reviews corporate and asset acquisition and merger opportunities.

Critical Accounting Policies

Our significant accounting policies are more fully described in Note 2 and Note 3 to our consolidated financial statements. Some of our accounting policies require the application of significant judgment by management in selecting the appropriate

Table of Contents

assumptions for calculating financial estimates. Refer to Note 3 on pages F-17 to F-21 of this Annual Report for disclosure of critical accounting estimates and judgments. By their nature, these judgments are subject to an inherent degree of uncertainty and are based on our historical experience, terms of existing contracts, management's view on trends in the gold mining industry and information from outside sources. The audit committee considered and approved the key estimates and accounting policies.

The critical accounting estimates and judgments as detailed in Note 3 on pages F-17 to F-21 are listed as follows:

	TVA
	Corporation tax claims
Carrying values of property, plant and equipment and joint venture investments	Capitalization and depreciation
	Gold price assumptions
	Determination of ore reserves
	Future rehabilitation obligations
	Stockpiles, gold in process and product inventories
	Post production open cast mining stripping
	Exploration and evaluation expenditure
	Share-based payments

Recent accounting pronouncements

The IASB has issued the following new standards, amendments to published standards and interpretations to existing standards with effective dates on or prior to January 1, 2014 which have been adopted by the group for the first time this year.

		IFRS as issued by IASB	
		Effective period commencing on or after	Impact on group
IAS 32	Amendment – offsetting financial assets and financial liabilities	Jan 1, 2014	No material impact
IAS 36	Amendment – recoverable amounts disclosures for non-financial assets	Jan 1, 2014	No material impact
IFRIC 21	Levies	Jan 1, 2014	No material impact

Refer to Note 2 beginning on page F-7.

Standards effective in future periods

Certain new standards, amendments and interpretations to existing standards have been published that are relevant to the Group's activities mandatory for the Group's accounting periods beginning after January 1, 2015 or later periods and which the Group has decided not to adopt early. These are:

		Effective period commencing on or after
Annual improvements to IFRSs 2010-2012 cycle (effective July 1, 2014); and Annual improvements to IFRSs 2011-2013 cycle (effective July 1, 2014)		
IFRS 9	Financial instruments	January 1, 2018
IAS 19	Amendment – Defined benefit plans; employee contributions	July 1, 2014
IFRS 11	Amendment – Accounting for acquisition of interests in joint operations	January 1, 2016
IAS 16 & IAS 38	Amendments – Clarification of acceptable methods of depreciation and amortization	January 1, 2016
IFRS 15	Revenue from contracts with customers	January 1, 2017
IAS 27	Amendment – Equity method in separate financial statements	January 1, 2016
IFRS 10 & IAS 28	Amendment – Sale or contribution of assets between an investor and its associate or joint venture	January 1, 2016
IAS 1	Amendment – Disclosure initiative	January 1, 2016
	Annual improvements to IFRSs (2012-2014 cycle)	January 1, 2016

The group is currently assessing the impact of these standards on the financial statements. At present, no impact is anticipated in respect of the standards and interpretations, given the nature of operations.

Table of Contents

A. OPERATING RESULTS

Our operating and financial review and prospects should be read in conjunction with our consolidated financial statements, accompanying notes thereto, and other financial information appearing elsewhere in this Annual Report.

The information below includes non-GAAP measures, which include 100% of the results of the group's Loulo, Goukoto and Tongon gold mines, together with its 45% share of Kibali gold mine and 40% share of Morila gold mine. Refer to explanation of non-GAAP measures provided in the section "Non-GAAP Measures" above. Non-GAAP measures are identified when used.

Years Ended December 31, 2014 and 2013

Total Revenue

Gold sales for the group of \$1.43 billion, including the attributable share of equity accounted joint ventures, were 13% higher than the previous year on the back of a 23% rise in ounces sold to 1,134,941oz, offset by an 8% decrease in the average gold price received to \$1,264/oz.

Total IFRS revenues from gold sales for the year ended December 31, 2014 decreased by \$50.9 million, or 4.5%, from \$1,137.7 million to \$1,086.8 million.

Share of Profits of Equity Accounted Joint Ventures

The increase in share of profits of equity accounted joint ventures to \$75.9 million from \$54.3 million in the prior year reflected the ramp-up of Kibali, which completed its first full year of production, partially offset by a drop in profits from Morila, which were lower than the previous year due to lower gold production and sales. The share of profits from the Kibali joint venture is stated after a tax charge of \$20.3 million (attributable), including deferred tax calculated at 30% of profit, notwithstanding that the mine has an accelerated tax allowance which reduces the cash tax paid in the initial years.

Other Income

Other income of \$5.5 million for the year ended December 31, 2014 compared to \$6.0 million for the year ended December 31, 2013. Other income includes management fees in respect of Kibali and Morila of \$5.5 million (2013: \$6.0 million).

Costs and Expenses*Total Cash Costs (non-GAAP)*

The following table sets out our total ounces sold and total cash cost and production cost per ounce sold for the years ended December 31, 2014 and 2013:

	Year Ended December 31,			
	2014		2013	
	Ounces sold	\$ Per Ounce	Ounces sold	\$ Per Ounce
Morila (40% share) cash costs	44,109	1,143	56,729	763
Loulo (100% share) cash costs	376,490	713	312,748	776
Tongon (100% share) cash costs	227,103	872	236,279	828
Goukoto (100% share) cash costs	254,634	613	274,802	622
Kibali (45% share) cash costs	236,606	573	39,690	464
Total ounces (sold)	1,134,941		920,248	
Group total cash costs per ounce ¹		698		715

1. Refer to explanation of non-GAAP measures provided. "Item 3. Key Information – A. Selected Financial Data".

Total cash costs (non-GAAP) for the year ended December 31, 2014 of \$791.8 million increased by 20.3% (2013:\$658.0 million) primarily as a result of a full year of production at Kibali, which came online in October 2013, along with higher costs at Morila and Tongon. Total cash cost per ounce decreased by 2% to \$698/oz for the year, primarily reflecting the increase in ounces sold at Loulo-Goukoto, on the back of higher grade ore milled and production.

Mining and processing costs for the year ended December 31, 2014 of \$712.8 million increased by 4.7% (2013:\$681.1 million), mostly on the back of higher depreciation and amortization at the Loulo-Goukoto complex and at Tongon, as more assets were brought into use. The total includes depreciation and amortization described below. The total further includes 'other mining and processing costs' which comprise various expenses associated with providing on mine administration support services to the Loulo,

Table of Contents

Goukoto, and Tongon mines. These charges amounted to \$64.8 million for the year ended December 31, 2014 and \$61.3 million for the year ended December 31, 2013.

Royalties decreased by \$1.9 million, or 3.3%, to \$56.5 million for the year ended December 31, 2014 from \$58.4 million for the year ended December 31, 2013. The decreased royalties reflect the lower average gold price received (8% decrease), partially offset by increased ounces sold (23% increase).

Depreciation and Amortization

Depreciation and amortization of \$146.8 million for the year ended December 31, 2014 increased by \$16.2 million or 12.4% compared to the year ended December 31, 2013 as a result of increased assets brought into use at the Loulo-Goukoto complex and at Tongon in the current year. Depreciation charges associated with the Kibali and Morila joint ventures are included in the “share of profits of equity accounted joint ventures.”

Exploration and Corporate Expenditure

Exploration and corporate expenditure was \$36.8 million for the year ended December 31, 2014 and \$49.5 million for the year ended December 31, 2013. Drilling programs were undertaken across the company’s greenfields exploration targets, together with exploration work on feasibility stage projects, including those at Kibali, Massawa, Loulo and Goukoto, which were capitalized to property, plant and equipment. Since the company was listed in 1997, it has discovered more than 31 million reserve ounces which, when divided by the exploration and corporate costs expensed over this period, equates to less than \$18/oz of gold.

Finance Income

Finance income amounts consist primarily of interest received on cash held at banks, which was \$0.1 million for 2014 as compared to \$1.2 million in 2013. This decrease was mainly due to a decrease in the average cash balance held during 2014 compared to 2013.

Finance Costs

Finance costs for the year ended December 31, 2014 were \$4.2 million compared to finance costs for the year ended December 31, 2013 of \$7.7 million. The decrease of \$3.5 million is mainly due to a \$5.0 million decrease in the foreign exchange loss on financing activities included in the figure, partially offset by a \$1.6 million increase in finance cost, mainly due to the annual facility fees of the revolving credit facility. The company has entered into a new unsecured revolving credit facility, which doubled the size of facilities available to \$400 million, on similar terms to the previous facility and which matures in December 2018.

Income Tax Expense

The income tax expense amounted to \$81.9 million for the year ended December 31, 2014 increased by \$5.2 million and by 6.8% compared to the year ended December 31, 2013. Goukoto's two year corporate tax holiday beginning from first production ended at the start of June 2013, which contributed to the increased tax charge. Tongon will benefit from its exoneration from corporate tax for five years until December 1, 2015. Under Malian tax law, income tax is based on the greater of 30% taxable income or 0.75% of gross revenue. Under Ivorian tax law, income tax is based on the greater of 25% of taxable income or 0.5% of gross revenue. Refer to Note 4 on page F-21 of this Annual Report for reconciliation between implied tax on profits at statutory tax rates and actual tax charges. The income tax charge associated with the Kibali and Morila equity accounted joint ventures is included within "share of profits of equity accounted joint ventures."

Non-controlling Interests

The non-controlling interests for the year ended December 31, 2014 represent the State of Mali's 20% share of the profits at Loulo, the Ivorian government's 10% share and other outside shareholder's 1% share of the profits at Tongon, as well as the State of Mali's 20% share of the profits at Goukoto.

Years Ended December 31, 2013 and 2012

Total Revenue

Gold sales (non-GAAP) for the year ended 31 December 2013 of \$1.3 billion were in line with the previous year as a result of a 16% increase in ounces sold offset by a 17% decrease in the average gold price received of \$1,376/oz (2012: \$1,660/oz). The increase in ounces sold was partly attributable to the start of production at Kibali, as noted above, as well as higher grades and recoveries at the Loulo- Goukoto complex.

Table of Contents

Total IFRS revenues from gold sales for the year ended December 31, 2013 decreased by \$45.4 million, or 4%, from \$1,183.1 million to \$1,137.7 million.

Share of Profits of Equity Accounted Joint Ventures

Share of profits of equity accounted joint ventures for the year ended December 31, 2013 of \$54.2 million increased by \$13.3 million from \$40.9 million from the year ended December 31, 2012, reflecting the start of production at Kibali in the year, offset in part by lower ounces sold and gold prices achieved at Morila.

Other Income

Other income of \$6.0 million for the year ended December 31, 2013 compared to \$12.6 million for the year ended December 31, 2012. Other income includes management fees in respect of Kibali and Morila of \$6.0 million (2012: \$7.5 million). Other income in 2012 further includes operational foreign exchange gains of \$5.1 million.

Costs and Expenses*Total Cash Costs (non-GAAP)*

The following table sets out our total ounces sold and total cash cost and production cost per ounce sold for the years ended December 31, 2013 and 2012:

	Year Ended December 31,			
	2013		2012	
	Ounces sold	\$ Per Ounce	Ounces sold	\$ Per Ounce
Morila (40% share) cash costs	56,729	763	81,005	759
Loulo (100% share) cash costs	312,748	776	214,739	781
Tongon (100% share) cash costs	236,279	828	210,396	772
Goukoto (100% share) cash costs	274,802	622	287,712	706
Kibali (45% share) cash costs	39,690	464	-	-
Total ounces (sold)	920,248		793,852	
Group total cash costs per ounce ¹		715		735

1. Refer to explanation of non-GAAP measures provided. "Item 3. Key Information – A. Selected Financial Data".

Total cash costs (non-GAAP) for the year ended December 31, 2013 of \$658.0 million increased by 13% (2012:\$583.3 million), mainly due to increased costs at Tongon and the Loulo-Gounkoto complex due to increased throughput, increased mining costs, and the production from Kibali during the last quarter of the year, slightly offset by a decrease in costs at Morila. Total cash cost per ounce decreased by 3% to \$715/oz for the year, reflecting the low cost production of Kibali during the latter part of the year and higher grades and production at Loulo-Gounkoto offset by a slight increase in costs at Tongon in the year, due to the lower grade and recovery.

Mining and processing costs for the year ended December 31, 2013 of \$678.5 million increased by 15% (2012:\$588.4 million), mainly due to increased costs at Tongon and the Loulo-Gounkoto complex due to increased throughput and increased mining costs. The total includes depreciation and amortization described below. The total further includes 'other mining and processing costs' which comprise various expenses associated with providing on mine administration support services to the Loulo, Gounkoto, and Tongon mines. These charges amounted to \$61.3 million for the year ended December 31, 2013 and \$75.8 million for the year ended December 31, 2012. The decrease in other mining and processing costs reflects the cost saving initiatives which took place across the group during 2013.

Royalties decreased by \$1.3 million, or 2%, to \$58.4 million for the year ended December 31, 2013 from \$59.7 million for the year ended December 31, 2012. The decreased royalties reflect the lower average gold price received and decreased gold sales.

Depreciation and Amortization

Depreciation and amortization of \$130.6 million for the year ended December 31, 2013 increased by \$12.6 million or 11% compared to the year ended December 31, 2012. The rise year on year reflects the increase in production activity across the mines in the group as well as an increase in the operating assets across the group. Depreciation charges associated with the Kibali and Morila joint ventures are included in the 'share of profits of equity accounted joint ventures'.

Table of Contents

Exploration and Corporate Expenditure

Exploration and corporate expenditure was \$49.5 million for the year ended December 31, 2013 and \$39.0 million for the year ended December 31, 2012. Drilling programs were undertaken across the company's greenfields exploration targets, together with exploration work on feasibility stage projects, including those at Kibali, Massawa, Loulo and Goukoto, which were capitalized to property, plant and equipment. Since the company was listed in 1997, it has discovered more than 29 million reserve ounces which, when divided by the exploration and corporate costs expended over this period, equates to less than \$18/oz of gold.

Finance Income

Finance income amounts consist primarily of interest received on cash held at banks, which was \$1.2 million for 2013 as compared to \$2.0 million in 2012. This decrease was mainly due to a decrease in the average cash balance held during 2013 compared to 2012.

Finance Costs

Finance costs for the year ended December 31, 2013 were \$7.7 million compared to finance costs for the year ended December 31, 2012 of \$1.0 million. The increase of \$6.7 million is mainly due to a \$5.2 million increase in the foreign exchange loss on financing activities included in the figure, as well as a \$1.2 million increase in finance cost mainly due to the annual facility fees of the revolving credit facility with HSBC. The company entered into a \$200.0 million unsecured revolving credit facility with HSBC and a syndicate of three other banks in 2013.

Income Tax Expense

The income tax expense amounted to \$76.7 million for the year ended December 31, 2013 and increased by \$39.6 million and by 107% compared to the year ended December 31, 2012. Goukoto's two year corporate tax holiday beginning from first production ended at the start of June 2013, which contributed to the increased tax charge. Tongon will benefit from its exoneration from corporate tax for five years until December 1, 2015. Under Malian tax law, income tax is based on the greater of 30% taxable income or 0.75% of gross revenue. Under Ivorian tax law, income tax is based on the greater of 25% of taxable income or 0.5% of gross revenue. Refer to Note 4 on page F-30 of this Annual Report for reconciliation between implied tax on profits at statutory tax rates and actual tax charges. The income tax charge associated with the Kibali and Morila equity accounted joint ventures is included within 'share of profits of equity accounted joint ventures'.

Non-controlling Interests

The non-controlling interests for the year ended December 31, 2013 represent the State of Mali's 20% share of the profits at Loulo, the Ivorian government's 10% share and other outside shareholder's 1% share of the profits at Tongon, as well as the State of Mali's 20% share of the profits at Goukoto.

B. LIQUIDITY AND CAPITAL RESOURCES

Cash Resources

The group had \$82.8 million cash and cash equivalents for the year ended December 31, 2014 and \$38.2 million for the year ended December 31, 2013.

Operating Activities

Net cash generated from operating activities was \$317.6 million for the year ended December 31, 2014 and \$464.5 million for the year ended December 31, 2013. The \$146.9 million decrease year on year was due mainly to the decrease in profit before tax of \$49.5 million reflecting the 8% decrease in the gold price year on year, increased costs, including depreciation, partially offset by higher profits from joint ventures. Cash flows related to operating working capital items decreased by \$20.0 million year on year, mainly due to the decrease in cash flows related to trade and other payables of \$146.8 million. This occurred mainly due to the timing of payments of invoices. This was partially offset by an increase in cash flows related to receivables and inventories year on year.

Cash outflows related to income tax paid increased by \$71.4 million, mainly due to increased tax payments at Goukoto, following the end of the tax holiday at Goukoto in June 2013.

Net cash generated from operating activities was \$464.5 million for the year ended December 31, 2013 and \$524.2 million for the year ended December 31, 2012. The \$59.7 million decrease year on year was due mainly to the reduced gold prices on profitability and the changes in operating working capital items. Cash flows related to receivables decreased by \$62.7 million during 2013, mainly due to increases in TVA receivables at Loulo, as well as increases in gold debtor balances at Loulo due to the timing of

Table of Contents

shipments at year end. Cash flows related to inventories and ore stockpiles decreased during 2013 by \$49.8 million, due to an increase in ore stockpiles at the operations. Cash flows related to trade and other payables increased by \$65.6 million from December 31, 2012 to December 31, 2013, mainly due to the effect of additional contractors and accruals, primarily at the Loulo-Goukoto complex, and Tongon, which reflects the increased production and mining activity.

Table of Contents

Investing

Investing activities for the year ended December 31, 2014 utilized \$221.6 million compared to \$728.0 million utilized for the year ended December 31, 2013 and consisted primarily of \$142.6 million expenditure at Loulo related to the developments at the Gara and Yalea underground mines while \$8.7 million was incurred at Goukoto and \$19.2 million was incurred at Tongon. Other cash outflows included additional investments in joint ventures (\$51.5 million), mostly to fund the group's share of capital expenditure at Kibali.

Investing activities for the year ended December 31, 2013 utilized \$728.0 million compared to \$566.1 million utilized for the year ended December 31, 2012 and consisted primarily of \$255.7 expenditure at Loulo related to the developments at the Gara and Yalea underground mines while \$11.0 million was incurred at Goukoto and \$23.6 million was incurred at Tongon. A further \$12.8 million was incurred on other projects elsewhere in the group, primarily at Massawa. Funds invested in equity accounted joint ventures at Kibali amounted to \$416.4 million (attributable portion) and related to the village relocation program, the construction of the metallurgical plant and the hydroelectricity plant, site infrastructure, open pit mining and roads, together with working capital. \$8.5 million was advanced to the group's asset leasing joint venture, RAL 1 Limited (RAL 1).

Financing

Financing activities for the year ended December 31, 2014 used \$51.4 million. Financing activities for the year ended December 31, 2013 used \$72.2 million. Cash spent in 2014 mainly comprised the payments of dividends of \$46.1 million paid to the company's shareholders and \$10.1 million of dividends paid to the State of Mali in relation to Goukoto.

Financing activities for the year ended December 31, 2013 used \$72.2 million. This mainly was comprised of dividends of \$46.1 million paid to the company's shareholders and \$27.2 million paid to non-controlling interests in Goukoto, partially offset by \$1.2 million received from the issue of ordinary shares.

Credit and Loan Facilities

Kibali utilizes mining equipment under a finance lease provided by KAS 1 Limited (KAS). The group has an effective 25.05% interest in KAS which is held through the equity accounted joint venture Kibali (Jersey) Limited. The lease term is 10 years. The finance lease liability is recognized in respect of the equipment which has been transferred to Kibali under an installment sale agreement. The finance lease liability is interest bearing at 8% and is to be reduced by

rental payments monthly as agreed in the installment sale agreement.

The company has entered into a new unsecured revolving credit facility during 2014, which doubled the size of the facility to \$400.0 million. The facility is with HSBC and three other banks and matures in December 2018. The interest rate is LIBOR plus 1.5% at the lower end of the leverage area. The company drew down and repaid \$50.0 million under its previous facility during the year. The interest rate on the new credit facility, if drawn, would be LIBOR plus 1.5% per annum based on the company's current level of leverage. The facility includes financial covenants in respect of earnings before interest and taxes (EBIT); earnings before interest, taxes, depreciation and amortization (EBITDA); net finance charges; tangible net worth; total debt; debt cover and interest cover. As of December 31, 2014, the company was in compliance with all of its financial covenants under the credit facility.

Based on the company's current cash resources and available facilities, projected operating cash flows and capital expenditure, we are confident the company will be able to meet its obligations at the prevailing gold price.

- 86 -

Table of ContentsCorporation Tax Claims

As at December 31, 2014, the group has received claims for various taxes from the State of Mali totaling \$313.0 million (December 31, 2013: \$123.1 million), in respect of the Loulo, Goukoto and Morila mines. The claims have increased by \$190.0 million in the year, substantially representing \$201.3 million of additional claims received in respect of Loulo and Goukoto following the tax audits during the year, offset by foreign exchange movements. Having taken professional advice, the group considers the material claims to be without foundation and is strongly defending its position, including following the appropriate legal process for disputes within Mali. Accordingly, no material provision has been made for the claims.

Loulo, Goukoto and Morila have legally binding mining conventions which guarantee fiscal stability, govern the taxes applicable to the companies and allow for international arbitration in the event a dispute cannot be resolved in the country. Management continues to engage with the Malian authorities at the highest level to resolve this issue. During the prior year, Loulo submitted a request for arbitration at the International Centre for the Settlement of Investment Disputes against the State of Mali in relation to certain of the disputed tax claims. The arbitration process is ongoing and is expected to be concluded during 2015.

Corporate, Exploration, Development and New Business Expenditures

Our expenditures on corporate, exploration, development and new business activities for the past three years are as follows:

Area	Year Ended December 31, \$'000		
	2014	2013	2012
Rest of Africa	1,326	2,932	2,381
Burkina Faso	211	858	790
Mali	5,389	9,148	3,845
Côte d'Ivoire	3,764	5,067	3,752
Senegal	1,971	3,599	4,483
DRC	101	1,034	906
Total exploration expenditure	12,762	22,638	16,157
Corporate expenditure	24,003	26,847	22,876
Total exploration and corporate expenditure	36,765	49,485	39,033

The Group has a portfolio of exploration permits and projects, with various exploration programs, ranging from early to substantial stage, underway in the Democratic Republic of Congo, Mali, Senegal, Burkina Faso and Côte d'Ivoire.

Working Capital

Management believes that our working capital resources, by way of internal sources and available credit facilities are sufficient to fund our currently foreseeable future business requirements. Although lower than 2014, significant capital expenditure will be incurred across the group during the year to support the planned continued growth in production, especially at Kibali, of approximately \$280.0 million (100% of project), and the ongoing development of the underground mines at Loulo, where total capital at the Loulo-Goukoto complex is forecast at \$155.0 million. Project and sustaining capital at Tongon, including completion of the flotation circuit upgrade, is estimated at \$20.0 million, and \$12.0 million will be spent at Morila (100% of the project), mostly on the TSF retreatment project. Continued work on the Massawa feasibility project is estimated at \$10.0 million. Consequently, total group capital expenditure for 2015 is expected to be approximately \$330.0 million (including attributable share of joint ventures).

C. RESEARCH AND DEVELOPMENT, PATENTS AND LICENSES, ETC.

We are not involved in any research and development and have no registered patents or licenses.

D. TREND INFORMATION

Our financial results are subject to the movement in gold prices. In the past fiscal year, the general trend has been downwards and this has had an impact on revenues. However it should be noted that fluctuations in the price of gold remain a distinct risk to us.

Table of Contents

Gold Market

The gold market is relatively liquid compared with many other commodity markets, with the price of gold generally quoted in US dollars. The physical demand for gold is primarily for fabrication purposes, and gold is traded on a world-wide basis. Fabricated gold has a variety of uses, including jewelry, electronics, dentistry, decorations, medals and official coins. In addition, central banks, financial institutions and private individuals buy, sell and hold gold bullion as an investment and as a store of value.

Historically, gold has been used as a store of value because it tends to retain its value in relative terms against basic goods in times of inflation and monetary crisis. Therefore, large quantities of gold in relation to annual mine production are held for this purpose. This has meant that, historically, the potential total supply of gold has been far greater than annual demand. Thus, while current supply and demand play some part in determining the price of gold, this does not occur to the same extent as for other commodities.

Instead, gold prices have been significantly affected, from time to time, by macro-economic factors such as expectations of inflation, interest rates, exchange rates, changes in reserve policy by central banks, and global or regional political and economic crises. In times of inflation, currency devaluation, and political and economic crises, gold has traditionally been seen as refuge, leading to increased purchases of gold and a support for the price of gold.

Interest rates affect the price of gold on several levels. High real interest rates increase the cost of holding gold, and discourage physical buying in developed economies. High Dollar interest rates also make hedging by forward selling attractive because of the higher contango premiums (differential between LIBOR and gold lease rates) obtained in the forward prices. Increased forward selling in turn has an impact on the spot price at the time of sale.

Changes in reserve policies of central banks have affected the gold market and gold price on two levels. On the physical level, a decision by a central bank to decrease or to increase the percentage of gold in bank reserves leads to either sales or purchases of gold, which in turn has a direct impact on the physical market for the metal. In practice, sales or purchases by central banks have often involved substantial tonnages within a short period of time and this selling/buying can place strong pressure on the markets at the time they occur. As important as the physical impact to official sales, announcements of rumors of changes in central bank policies which might lead to the sale of gold reserves historically had an effect on market sentiment and encouraged large speculative positions against gold in the futures market for the metal.

The volatility of gold prices is illustrated in the following table, which shows the approximate annual high, low and average of the afternoon London Bullion Market fixing price of gold in Dollars for the past ten years.

Year	Price Per Ounce (\$)		
	High	Low	Average
2005	537	411	444
2006	725	525	604
2007	841	608	695
2008	1,011	712	871
2009	1,213	810	972
2010	1,421	1,058	1,224
2011	1,895	1,319	1,572
2012	1,792	1,540	1,669
2013	1,694	1192	1,411
2014	1,385	1,142	1,266
2015 (through February)	1,296	1,172	1,240

E. OFF-BALANCE SHEET ARRANGEMENTS

None.

Table of Contents**F. TABULAR DISCLOSURE OF CONTRACTUAL OBLIGATIONS**

Our contractual obligations and commercial commitments are described below. The related obligations as at December 31, 2014 are set out below. The figures presented exclude equity accounted joint venture balances:

	Total	Less than 1 year	1-3 years	3-5 years	More than 5 years
Trade and other payables	82,354	82,354	-	-	-
Operating lease obligations	24,864	3,108	6,216	6,216	9,324
Environmental rehabilitation ¹	55,904	239	2,653	-	53,012
Loans from minority shareholders in subsidiaries	2,766	-	-	-	2,766
Total contractual cash obligations	165,888	85,701	8,869	6,216	65,102
Contracts for capital expenditure	9,573	9,573	-	-	-

1. Obligation is to rehabilitate site but amounts shown are estimated discounted cashflows.

Refer to Notes 10 and 19 on pages F-25 to F-31 and F-46, respectively of this Annual Report for details of the Joint Venture Agreements with AngloGold Ashanti, DTP and WAMFF Ltd.

Item 6. Directors, Senior Management and Employees**A. DIRECTORS AND SENIOR MANAGEMENT**

Our Articles of Association provide that the board must consist of no fewer than two and no more than 20 directors at any time. Effective as of March 1, 2015, Safiatou F Ba-N'Daw was appointed to the board as an independent non-executive director. The board currently consists of 10 directors.

Our Articles of Association provide that any new director should be re-elected by the shareholders at the annual general meeting following the date of the director's appointment. In accordance with the United Kingdom Governance Code (2012 Edition) which calls for directors to seek reelection annually, at the annual general meeting held on May 6, 2014, Dr. D.M. Bristow, Mr. G.P. Shuttleworth, Mr. N.P. Cole Jr., Mr. C.L. Coleman, Dr. K. Dagdelen, Dr. K. Voltaire, Mrs. J.M. Lioko, Mr. A.J. Quinn and Mr. J Kassum were re-elected.

According to the Articles of Association, the board meets at intervals determined by it from time to time.

The address of each of our executive directors and non-executive directors is the address of our principal executive offices, 3rd Floor, Unity Chambers, 28 Halkett Street, St. Helier, Jersey, JE2 4WJ, Channel Islands.

Executive Directors

D. Mark Bristow (56) Chief Executive Officer. Mr. Bristow has been Chief Executive Officer since incorporation of the company, which was founded on his pioneering exploration work in West Africa. He has subsequently led the company's growth through the discovery and development of world-class assets into a major international gold mining business. He has also played a significant part in promoting the emergence of a sustainable mining industry in Africa. A geologist with a PhD from Natal University, South Africa, he has held board positions at a number of global mining companies and is non-executive chairman of Rockwell Diamonds Inc.

Graham P. Shuttleworth (46) Chief Financial Officer. Finance Director. Mr. Shuttleworth joined us as Chief Financial Officer and Finance Director in July 2007 but has been associated with the company since its inception, initially as part of its management team involved in listing the company on the London Stock Exchange in 1997, and subsequently as an advisor. A chartered accountant, Mr. Shuttleworth was a managing director and the New York based head of metals and mining for the Americas in the global investment banking division of HSBC before taking up his position at the company. At HSBC he led or was involved in a wide range of major mining industry transactions including our NASDAQ listing. Mr. Shuttleworth is a graduate of the University of Cape Town with a bachelor of commerce degree and an honors degree from the University of South Africa.

Table of Contents

Non-Executive Directors

Christopher L. Coleman (46) Non-Executive Chairman. Chairman of the governance and nomination committee and member of the remuneration committee. He was appointed chairman of the board with effect from May 6, 2014. Mr. Coleman is the head of banking and a director of NM Rothschild & Sons Limited. He is also chairman of Rothschild Bank International in the Channel Islands and serves on a number of other boards and committees of the Rothschild Group, which he joined in 1989. A BSc (Econ) graduate from the London School of Economics, he was a non-executive director of the Merchant Bank of Central Africa from 2001 to 2008. He is also a non-executive director of the Papa John's International Inc. He was appointed a director in November 2008.

Norborne P. Cole (73) Senior Independent Non-Executive Director. Chairman of the remuneration committee and member of the governance and nomination committee. Mr. Cole started working for the Coca-Cola Company as a field representative in the USA in 1966 and advanced steadily through the organization, becoming chief executive of Coca-Cola Amatil in Australia in 1994, a position he held until 1998. Under his leadership, Coca-Cola Amatil grew into the second largest Coca-Cola bottler in the world. Now based in San Antonio, Texas, he serves on the boards of a number of US companies including Papa John's International Inc. He was appointed a director in May 2006.

Kadri Dagdelen (60) Independent Non-Executive Director. Member of the governance and nomination committee. A professor and previously the head of the department of mining engineering at the Colorado School of Mines, US A, Mr. Dagdelen began his professional career as a mining engineer at Homestake Mining Co (now Barrick Gold Corporation) and was the technical services manager when he left for academia in 1992. With a PhD in mining engineering and a ME in geostatistics, Mr. Dagdelen has been involved in numerous research and consulting projects worldwide. He also served on the board of directors of the Society of Mining, Exploration and Metallurgy in the USA for six years and has chaired other professional societies that support the mining industry. He was appointed a director in January 2010.

Safiatou Francoise Ba-N'Daw (62) Independent Non-Executive Director. A Harvard University MBA graduate, Ms. Ba-N'Daw spent 12 years with the World Bank as a senior financial specialist for the South Asia region, following which she was appointed Côte d'Ivoire's Minister of Energy, a position she held until 2000. Ms. Ba-N'Daw was subsequently appointed a director of the United Nation's Development Program for South-South Cooperation (formerly the Special Unit: Technical Cooperation among Developing Countries) until 2004 when she was appointed Deputy Chief of Staff to the Prime Minister of Côte d'Ivoire. She is a managing partner of Alizes Consultants, an international consulting services firm, and deputy chairperson of Niger Omega, a Nigerian and London based oil and gas services company. She was appointed a director on March 1, 2015.

Jemal-ud-din Kassum (66) Independent Non-Executive Director. Member of the governance and nomination and audit committees. Mr. Kassum is a former World Bank vice president for the East Asia and Pacific region. Before that, he had a 25 year career with the International Finance Corporation. He sits on the board of PT Indonesia Infrastructure

Finance, Thien Minh Group and Khan Bank. A Tanzanian national based in the USA, he now provides strategic advice to international financial institutions and governments. He was educated at Oxford University and holds an MBA from Harvard University. He was appointed a director in January 2014.

Jeanine Mabunda Lioko (50) Independent Non-Executive Director. Member of the audit committee. Mrs. Mabunda Lioko has spent a number of years working in the DRC's finance industry including with Citi Group and as an advisor to the Governor of Banque Centrale du Congo. A former Minister of Portfolio of the DRC, a position which she held for over five years, she is now a serving member of the National Assembly of the Democratic Republic of Congo, representing the Equateur Province. Mrs. Mabunda Lioko is also a special advisor to the DRC government to prevent violence against women and the recruitment of children for war. She was educated in Brussels, Belgium, and holds a law degree from the Catholic University of Louvain and a postgraduate degree in commercial science from the ICHEC Brussels Management School. She joined the board in January 2013.

Andrew J. Quinn (61) Independent Non-Executive Director. Member of the audit and remuneration committees. Mr. Quinn retired at the end of 2011 from his position as head of mining investment banking for Europe and Africa at CIBC after 15 years in the role and more than 35 years' experience of the mining industry. With a BSc (Hons) in mineral exploitation (mining engineering) from Cardiff University, Mr. Quinn began his career in Anglo American's gold division in 1975, holding various management and technical positions in South Africa, and worked briefly for Greenbushes Tin in Australia before joining The Mining Journal in 1982 as editor of its gold publications. In 1984 he entered the financial services industry joining James Capel (later HSBC Investment Banking) and then joining CIBC in 1996. He was appointed a director in November 2011.

Karl Voltaire (64) Independent Non-Executive Director. Chairman of the audit committee and member of the remuneration committee. A graduate in mineral resources engineering from the Ecole des Mines in Paris, Dr. Voltaire holds an MBA and PhD in economics and finance from the University of Chicago. He started his career as a mining engineer in Haiti and subsequently spent 23 years with the World Bank Group in Washington DC, including the International Finance Corporation (IFC) where his last position was that of director of global financial markets. Thereafter Dr. Voltaire was appointed a director of the Office of President at the

Table of Contents

African Development Bank. He was CEO of the Nelson Mandela Institution from 2005 to 2009, and is currently a member of the Board of Trustees of the African University of Science and Technology. He was appointed a director in May 2006.

Executive Officers

Willem Jacobs (56) General manager operations – Central and East Africa. Dr. Jacobs has a BPL(Hons) and DCom. He has served as a director of listed and private companies in the areas of mining, engineering and manufacturing in Southern, Central and Eastern Africa for the past 18 years. He joined us in January 2010.

John Steele (54) Technical and capital projects executive. Mr. Steele is responsible for the successful construction and commissioning of our Morila, Loulo, Tongon and Goukoto mines and leading the team developing the new Kibali mine in the DRC. He also continues to provide operational and engineering oversight.

Samba Touré (61) General manager – Operations West Africa. Mr. Touré joined the Morila mine in 2000 and held various responsibilities, culminating in the appointment in 2007 as the mine chief executive. In 2010, he was promoted to group operations general manager for West Africa.

Martin Welsh (43) General counsel and secretary. After qualifying as a lawyer in Scotland in 1998, he gained experience acting on numerous international corporate and finance transactions in London. He previously acted for us before joining the company in 2011 and assumed his current position in 2012.

Rodney Quick (43) Group General manager – evaluation. Mr. Quick joined us in 1996 and has been involved in the exploration, evaluation and production phases of all of our projects since Morila. He became responsible for all project development and evaluation for our group in 2009. Mr. Quick has a MSc Geology degree.

Our Articles of Association provide that the longest serving one-third of directors retire from office at each annual general meeting. Retiring directors normally make themselves available for re-election and are re-elected at the annual general meeting on which they retire. In accordance with the United Kingdom Governance Code (2012 Edition) the directors will offer themselves for reelection by shareholders at the company's annual general meeting. Our officers service as officers is regulated by standard industry employment agreements.

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

The date of appointment, date of expiration and length of service for each of our directors is set forth in the table below:

Director	Date of Appointment	Date of Expiration Term	Number of Years Served

¹ The United Kingdom Corporate Governance Code issued in September 2012 requires that all directors should stand for re-election on an annual basis.

Table of Contents

None of our directors and executive officers was selected under any arrangements or understandings between that director or executive officer and any other person. All of our non-executive directors are considered independent directors.

B. COMPENSATION

Our objective is to ensure that our executive remuneration policy encourages, reinforces and rewards the delivery of sustainable shareholder value. We aim to ensure that our pay arrangements are fully aligned with our approach to risk management, and take into account our obligations in respect of environmental, social and governance policies. We provide senior management, including executive directors, with competitive base salaries to attract and retain high caliber executives, based on personal performance profile and relevant experience. In addition, other elements of our remuneration program are designed to encourage and reward superior performance on an annual basis as well as sustainable long-term performance. The remuneration committee's policies are designed to meet these objectives and to ensure that the individual directors are fairly and responsibly rewarded for their respective contributions to our performance.

Fixed remuneration

Fixed remuneration comprise only of base salary. No pension contributions are funded by us. In 2015, fixed remuneration represents less than 21% for the chief executive officer and 32% for the chief financial officer of the total remuneration package (based on target performance).

Base Salary

The chief executive officer's and chief financial officer's base salaries are determined by the remuneration committee, taking into account the performance of the individual. We also benchmark each element of remuneration and the total remuneration package in comparison to FTSE 100, FTSE mining and comparable international gold mining companies. When setting base salaries, the remuneration committee also takes into consideration the requirement for extensive travel and time spent at the company's operations in Africa. This is considered critical to the effective management of the company's business.

At December 31, 2014, the annual base salaries of the executive directors were as follows:

CEO: Dr. D.M. Bristow \$1,575,000
CFO: Mr. G.P. Shuttleworth £495,600

Following a review of all aspects of the remuneration packages of the executive directors, it has been decided that the CEO's base salary be increased from \$1,575,000 to \$1,638,000 and the CFO's base salary be increased from £495,600 to £525,336 with effect from January 1, 2015, which represent increases of 4% and 6% of base salary respectively. The CEO's and CFO's base salary increases are in line with wider increases across the group. In addition, the CFO has continued his strong performance and the base salary award reflects this contribution in the context of Randgold's general pay increases and the CFO's market positioning. As is the remuneration committee's usual practice, it sought the views of our larger institutional shareholders and voting guidance services before deciding on these increases.

The base salary increases for the CEO and CFO also took account of the increases within the broader Randgold employee population. These increases took effect in October 2014 and ranged from 0% to 8%. The average increase in employee salaries was approximately 4.2%.

Retirement Benefits

Executive directors can elect to sacrifice up to 20% of their base salary to contribute to a defined contribution provident fund. The provident fund is offered to all of our senior management. We do not make any contribution to the provident fund.

Other Benefits

Executive directors can elect to receive other benefits, including medical aid, funded out of their base salary. Where appropriate, executive directors may be provided with benefits while traveling for work and the cost of membership of professional associations. Life insurance coverage is provided to the executive directors by the company through the group life insurance scheme which is also made available to the company's senior management.

Table of Contents

Variable Remuneration

Variable remuneration represents the major proportion of each executive director's remuneration package.

During 2014, the variable remuneration of the executive directors comprised:

An annual bonus opportunity, coupled with the requirement to defer a third of annual bonus earned into the Co-Investment Plan.

- Participation in a Co-Investment Plan rewarding performance over three years.

Performance shares awarded under the Restricted Share Scheme, rewarding performance over four years, with a further one year post-vesting retention requirement of the vested award.

- The CEO performance shares (as discussed below).

In 2015, to further support long term sustainability an additional one year post-vesting retention requirement has been introduced into the Co-Investment Plan, to increase the total restricted period from three to four years.

2014 Annual Bonus

Executive directors are eligible to receive an annual bonus, subject to the achievement of stretching performance criteria. The performance metrics are intended to reward the achievement of challenging strategic and financial targets that contribute to the creation of sustainable shareholder value. Each year, the remuneration committee reviews and may make adjustments to the criteria used for measuring performance taking into account the strategic objectives of the company for the year, before the metrics and targets are agreed for the annual remuneration cycle.

The annual bonus payable to the chief executive officer for achieving target performance in 2014 was 150% of base salary, with a maximum bonus of 300% of base salary for achieving outperformance. The annual bonus payable to the chief financial officer for achieving target performance in 2014 was 100% of base salary, with a maximum bonus of 200% of base salary for achieving outperformance.

Based on performance achieved against targets during the 2014 financial year, the remuneration committee determined, based on the performance metrics, that Dr. D.M. Bristow and Mr. G.P. Shuttleworth should receive bonus payments of \$2,866,579 and \$1,150,008, respectively.

Non-Executive Director Remuneration

The remuneration to be paid to our non-executive directors, including the chairman, for 2014 and 2015 is comprised of:

- An annual retainer fee to all non-executive directors of \$50,000 in 2014 and \$60,000 in 2015;
- An annual committee fee per committee served for both 2014 and 2015:
 - Audit committee \$35,000;
 - Remuneration committee \$25,000; and
 - Governance and Nomination committee \$10,000

The chairman of a board committee to receive an additional fee to the committee fee of \$15,000 2014, which has increased to \$20,000 for 2015;

The senior independent director, in addition to the annual fee but in lieu of any committee fees, to receive an additional fee of \$85,000 for both 2014 and 2015;

The chairman, in addition to the annual fee but in lieu of any committee fees, to receive an additional fee of \$200,000 in 2014 and \$225,000 in 2015;

Mr. P. Liétard, as chairman of the board until May 6, 2014, received an award of 1,200 ordinary shares in 2014. Subject to shareholder approval at the general meeting of the company, Mr. C. Coleman, as chairman of the board in 2015, will receive an award of 2,500 ordinary shares in 2015, in each case fully vested from grant; and

Subject to shareholder approval at the annual general meeting of the company, an award to each non-executive director of 1,200 ordinary shares in 2014 and 1,500 ordinary shares in 2015, fully vested from grant. The shares are

seen as an important element of our approach to remuneration policy in relation to the chairman and non-executive directors. They encourage share ownership and are delivered in lieu of cash. The directors are considered independent notwithstanding an award of shares.

- 93 -

Table of Contents

The shareholding requirement ensures that the interests of directors are aligned with shareholders. Executive directors are required to build up a holding in shares in the company at least equal in value to two times base salary from the value of vested long term incentive awards. At December 31, 2014, Dr. D.M. Bristow held shares in excess of four times base salary and Mr. G.P. Shuttleworth held shares at least equal in value to two times base salary. New directors have three years in which to acquire the required shareholding and this period could be extended at the discretion of the remuneration committee. Non-executive directors are required to build up and hold shares at least equal in value to two times the annual retainer fee of \$60,000, from the value of vested awards. All non-executive directors held shares equal to the value 200% of the annual retainer fee as at December 31, 2014 with the exception of Mr. Kassum, who was appointed to the board on January 31, 2014 and Mrs. Ba-N'Daw, who was appointed to the board with effect from March 1, 2015.

In 2009, 2010 and 2011, we awarded to our non-executive directors restricted shares which vested in three equal installments from the date of award. Beginning in 2012, annual awards to non-executive directors consisted of shares fully vested from grant.

CEO Performance Shares

At the 2013 annual general meeting, shareholders approved a one-off award of performance shares to D.M. Bristow. The vesting of the performance shares is subject to the achievement of the conditions set out below and D.M. Bristow continuing to hold office or employment with the company during the period of three years from April 29, 2013, the date of grant of the award of performance shares with an equivalent value of up to \$4,000,000. The achievement of each of the following conditions, which reflect the value enhancement and focus on establishing and operating our flagship Kibali gold mine, will result in the vesting of one-fifth of the shares subject to the award:

- the first gold pour occurs at the Kibali gold mine;
- the cumulative production at the Kibali gold mine in aggregate equals or exceeds 500,000oz of gold;
- gold production of the Randgold group in aggregate equals or exceeds 1Moz per annum for any financial year of the company;
- the vertical shaft at the Kibali gold mine is completed and signed-off by the contractor of the vertical shaft and by the representative of Kibali gold mine; and
- the Nzoro 2 hydroelectric power station provides electricity to the Kibali gold mine.

Vesting of each one-fifth of the award is to occur on the later of the expiration of the third anniversary after the date of grant and the date on which a condition is achieved provided D.M. Bristow holds office or employment as at the date of achievement of the condition. The award is subject to clawback at the discretion of the remuneration committee where a material misstatement is found contained in the annual report and accounts of the company on which vesting of the award (or any part thereof) is or is to be based.

Director	Date of award	Market price at date of award (\$) ¹	At Jan. 1, 2014	Awarded the year	Wasted the year	Market price at date vested (\$)	Lapsed the year	At Dec. 31, 2014	Vesting period ²
D.M. Bristow	Apr. 29, 2013	79.95	50,031	—	—	—	—	50,031	Each 1/5 th of the award vests on the fulfilment of the relevant performance condition provided D.M. Bristow remains in office or employment with the company until April 29, 2016

1. *NASDAQ Global Select Market closing price on day preceding grant or if a public holiday, the next trading day. The first vesting condition in respect of 10,006 shares was met on September 24, 2013, and during 2014, the*
2. *performance conditions in respect of a further 30,018 shares were met, however, these shares will only be transferred to the CEO provided he continues in office or employment until April 29, 2016. The shares do not vest in full until that date.*

Table of Contents

Restricted Share Scheme

The Restricted Share Scheme was approved by shareholders on July 28, 2008. Awards are determined as a percentage of base salary, with the maximum annual award being 200% of base salary for the chief executive officer and 100% of base salary for the chief financial officer.

For awards made in 2014, following feedback from shareholders, the Restricted Share Scheme was simplified with a performance measurement period of four years and the requirement of an additional post-vesting holding period of one year for 100% of the vested award.

Three separate measures of business growth were used, each weighted one third:

Additional reserves including reserve replacement

EPS growth

Absolute Total Shareholder Return (TSR)

In 2015, following a review of performance measures, the remuneration committee has determined that in order to improve the robustness of performance measurement and desensitize outcomes to volatility in the gold price the following three measures will apply, each weighted one third:

Additional reserves including reserve replacement

Total cash cost per oz

Relative TSR (versus industry peers)

The award of performance shares under the Restricted Share Scheme for the CEO and CFO for 2014 will vest subject to the achievement of the following performance targets:

Level of vesting	Year 4
Additional reserves including reserve replacement	
Nil	Less than 24%
40%	24%
Pro-rata 40% - 100% on a straight line basis	More than 24% and less than 40%
100%	40%
EPS growth	
Nil	Less than 10% per annum
40%	10% per annum
Pro-rata 40% - 100% on a straight line basis	More than 10% and less than 20%
100%	20% per annum
Absolute TSR	
Nil	Less than 8% per annum
40%	8% per annum
Pro-rata 40% - 100% on a straight line basis	More than 8% and less than 12%
100%	12% per annum

The award of performance shares under the Restricted Share Scheme for D.M. Bristow and G.P. Shuttleworth for 2015 will vest subject to the achievement of the following performance targets:

Level of vesting	Year 4
Reserve replacement ratio: cumulative over four years	
Nil	Less than 75%
30%	75%
Pro-rata 30% - 100% on a straight line basis	More than 75% and less than 110%
100%	110%
Total cash cost per oz: Average of four years weighted by annual production in ounces	
Nil	more than the higher end of costs guidance range
30%	equal to the higher end of the costs guidance range
Pro-rata 30% - 100% on a straight line basis	between the higher and lower costs guidance range
100%	equal to or lower than the lowest end of the costs guidance range

Table of Contents**Relative TSR: Four Year TSR v Comparator group**

Nil	Less than 50th percentile
30%	50th percentile
Pro-rata 30% - 100% on a straight line basis	More than 50th percentile and less than 75th percentile
100%	75th percentile

The remuneration committee will review these performance targets in the event that the company issues a material number of new shares.

The following table summarizes all awards of restricted shares to our executive directors and our non-executive directors outstanding, the market price on the NASDAQ Global Select Market at the date of award, the date of grant and the vesting schedule of the award.

Co-Investment Plan

The Co-Investment Plan rewards sustained performance relative to the group's peers over a three year period. Each year, one third of any annual bonus earned is compulsorily deferred and an executive director may also choose to commit further shares to the Co-Investment Plan. The maximum commitment which may be made in the Co-Investment Plan is 200% of base salary by the CEO and 100% of base salary by the CFO. Committed shares must be retained for three years and may be matched, depending on relative TSR performance over three years against the Euromoney Global Gold Index.

If, after three years, the TSR performance of the company equals or exceeds the performance of the Euromoney Global Gold Index, then the committed shares may be matched on a stepped scale, as shown in the next table. The maximum level of matching is one for one and is awarded for TSR performance of 10% per year (compounded) above the Euromoney Global Gold Index. This is considered to be a stretching level of performance and the remuneration committee considers this target to be challenging in the context of the company's historical sustained outperformance of the market.

Three year TSR (performance per annum)

Compound growth (per annum)	Level of matching on committed shares

Table of Contents*Co-Investment Plan*

Date of Grant	Award of shares	Date of vesting	Number of award shares vested
March 16, 2012	6,462	January 1, 2015	6,462

The vesting of the above Co-Investment Plan awards in respect of the CEO and the CFO were subject to a performance condition which measures the company's TSR performance against the Euromoney Global Gold Index. As the company's TSR performance exceeded the index by over 10% compound per year, the performance condition was met in full in respect of each of the awards and accordingly, the awards vested in full on the dates set out in the above tables representing a value of \$1,944,307 and \$435,603 for the CEO and CFO respectively, at a closing share price on December 31, 2014 of \$67.41.

The vesting of each one-fifth of the performance shares for the CEO is dependent on a number of conditions. During the year under review, the cumulative production at the Kibali gold mine in aggregate exceeded 500,000oz of gold, the gold production of the Randgold group in aggregate exceeded 1Moz and the Nzoro 2 hydroelectric power station provided electricity to the Kibali gold mine. Accordingly, the three performance conditions, each in respect of 10,006 shares were met at a total value of \$2,023,554 using a closing share price at December 31, 2014 of \$67.41. These shares will be transferred to the CEO provided the CEO is in office or employment by us on April 29, 2016.

The vesting of the above restricted share scheme awards for the CEO and CFO, were subject to the achievement of operational and financial targets. Four separate measures of business growth were used, each weighted 25%, with tranches of awards vesting after three, four and five years, as follows:

.	Additional reserves including reserve replacement
.	Absolute reserves excluding reserve replacement
.	EPS growth
.	Absolute TSR

None of the performance conditions were met in respect of the 2012 Award, and accordingly no shares were awarded. In respect of the 2011 Award none of the threshold targets were met except the EPS performance metric. The EPS performance condition was met in full resulting in 25% vesting of one-third of the tranche of shares awarded in 2011. Using a share price of \$67.41 at the end of the 2014 performance period, the value of that award is \$216,027 and

\$45,620, respectively for the CEO and CFO.

The following tables set forth the aggregate compensation for each of the directors, firstly the executive directors and secondly the non-executive directors:

	Base Salary		Annual Bonus		Other Payments ¹		Total	
	December 31, 2014 (\$)	2013 (\$)	December 31, 2014 (\$)	2013 (\$)	December 31 2014 (\$)	2013 (\$)	December 31, 2014 (\$)	2013 (\$)
Executive								
D.M. Bristow (CEO)	1,575,000	1,575,000	2,866,579	2,565,956	3,217,825	2,170,219	7,659,404	6,311,175
G.P. Shuttleworth (CFO)	816,551 ²	738,230 ²	1,150,008 ³	1,184,771 ³	442,494	545,417	2,409,053	2,468,418

Other payments consisted only of the annual 1,200 award of restricted shares to each non-executive director 1. approved at the AGM (NASDAQ Global Select Market closing price on day preceding date of grant or if a public holiday, the next trading day – 2014: \$80.94 per share, 2013: \$78.79 per share).

2. *Mr. Lietard retired from the board with effect from May 6, 2014.*
3. *Mr. Kassum was appointed to the board with effect from January 31, 2014.*
4. *Mrs. Ba-N'Daw was appointed to the board with effect from March 1, 2014.*

The high and low share prices for our ordinary shares for 2014 on the London Stock Exchange were £52.35 and £36.08, respectively, and our high and low price for our ADSs on the NASDAQ Global Select Market were \$85.61 and \$58.00, respectively. The ordinary share price on the London Stock Exchange and the price of an ADS on the NASDAQ Global Select Market at December 31, 2014, the last day of trading, were £43.80 and \$67.41, respectively.

The total number of awards of restricted shares granted as at February 28, 2015, including shares subject to vesting conditions, held by executive officers were as follows:

Name	Number of Awarded Shares
J. Steele	30,000
W. Jacobs	18,000
S. Touré	18,000
M.A. Welsh	26,000
R. Quick	18,000

C. BOARD PRACTICES

Directors' Terms of Employment

We have entered into contracts of employment with our executive directors Dr. D.M. Bristow and Mr. G.P. Shuttleworth with a notice period of six months.

We have entered into letters of appointment with our non-executive directors. Each director is subject to re-election annually by our shareholders in accordance with the provisions of the United Kingdom Corporate Governance Code (2012 Edition).

Board of Directors Committees

The board has established and delegated specific roles and responsibilities to three committees and three management committees to assist with the execution of its mandate and in order to ensure good corporate governance. The standing committees comprise an audit committee, a remuneration committee and a governance and nomination committee, all of which are chaired by independent non-executive directors. The audit, remuneration, and governance and nomination committees are comprised of non-executive directors. The management committees comprise the executive committee, the environmental and social committee, both chaired by the chief executive officer and the treasury committee, chaired by the chief financial officer.

Table of Contents

Meetings of the board committees are held quarterly and members of the executive committee are regular attendees at board and committee meetings by invitation. Several members of the management team attend meetings of committees whose roles and responsibilities are relevant to their job functions.

The board and management have been following the developments in corporate governance requirements and best practice standards, and as these have evolved we have responded in a positive and proactive way by assessing our practices against these requirements and modifying, or targeting for modification, practices to bring them into compliance with these corporate governance requirements and best practice standards.

Audit Committee

Membership of the audit committee, including its chairman, comprises only independent non-executive directors, in compliance with the Sarbanes-Oxley Act of 2002 and the guidelines of the United Kingdom Corporate Governance Code (2012 Edition). The audit committee is comprised of three independent non-executive directors. The members of the audit committee are Dr. K. Voltaire (chairman), Mr. A.J. Quinn, Mrs. J. Mabunda Lioko and Mr. J. Kassum. All members of the committee have considerable financial knowledge and experience to help oversee and guide the board and us in respect of the audit and corporate governance functions.

The board adopted the audit committee's terms of reference on January 30, 2012 and following a review by the audit committee on January 30, 2014, the audit committee agreed its terms of reference did not require amendment. A copy of the audit committee's terms of reference is available on the company's website . The committee's mandate, as delegated by the board, is to provide advice for the board regarding its oversight responsibilities and its duties, roles and responsibilities include the following:

- Monitoring the integrity of the financial statements and formal announcements relating to the group's financial performance and reviewing significant financial and other reporting judgments;

- Reviewing and challenging, where necessary, the consistency and appropriateness of accounting principles, policies and practices which have been adopted by the group in the preparation of the annual financial statements, financial reporting issues and disclosures in the financial reports;

- Reviewing and monitoring the effectiveness of the group's internal control and risk management systems, including reviewing the process for identifying, assessing and reporting key risks and control activities;

-

Approving the internal audit plan and reviewing regular reports from the head of internal audit on the effectiveness of the internal control system;

• Making recommendations to the board on the appointment, re-appointment or change of the group's external auditors and approving the remuneration and terms of engagement of the group's external auditors;

• Overseeing the board's relationship with the external auditors and ensuring the group's external auditors' independence and objectivity and the effectiveness of the audit process is monitored and reviewed;

• Developing, implementing and maintaining a policy on the engagement of the group's external auditors' supply of non-audit services;

• Reporting to the board any matters which have been identified that the committee consider need to be considered, actioned or improved upon;

• Monitoring the group's compliance with legal and regulatory requirements including ensuring that effective procedures are in place relating to the group's whistleblowing and anti-corruption policies; and

• Assessing whether the annual report, considered in its entirety, is fair, balanced and understandable, then subsequently recommending its approval to the board.

Table of Contents

The audit committee also reviews the scope of work carried out by the external auditors and holds discussions with the external auditors at least twice a year.

The audit committee is responsible for reviewing all financial statements prior to approval by the board, all other disclosures containing financial information and all management reports which accompany any financial statements. The audit committee is also responsible for approval of internal audit plans and for considering and approving the audit strategy and approach of the external auditor, any recommendation affecting the company's internal controls, the results of internal and external audits and any changes in accounting practices or policies.

In addition, the audit committee is responsible for assessing management's programs and policies relating to the adequacy and effectiveness of internal controls over our accounting and financial systems. The audit committee reviews and discusses with the chief executive officer and the chief financial officer the procedures undertaken in connection with their certifications for annual filings in accordance with the requirements of applicable securities regulatory authorities. The audit committee is also responsible for recommending to the board the external auditor to be nominated for shareholder approval who will be responsible for auditing the financial statements and completing other audit, review or attestation services. The audit committee also recommends to the board the compensation to be paid to the external auditor and directly oversees its work. Our external auditor reports directly to the audit committee. The audit committee reports directly to the board of directors.

In relation to risk management, the committee reviews our risk policies with respect to risk identification and the risk management process, ensuring that the requirements of the Sarbanes-Oxley Act of 2002 are met, as well as advising the board on the effectiveness of the risk management system. Risk identification and evaluation process occurs on a continual basis, however a formal review is done by the audit committee on an annual basis.

Our internal audit function plays a critical role in the functioning of the audit committee with the head of internal audit reporting directly to the committee with an administrative line to the chief financial officer. The group's internal control processes and systems are monitored by the group's internal audit function. In 2014, a formal internal audit plan, which was reviewed and approved by the audit committee, was executed across the group's operations using internal resources and supplemented through the engagement of external practitioners upon specified terms. The head of internal audit has unrestricted access to both the chief executive officer and the chief financial officer, the board chairman and the chairman of the audit committee and is invited to attend and present on the activities of the internal audit function at all meetings of the audit committee. The board is confident that the unfettered access of the internal audit function to key board members and the direct and regular reporting to the audit committee enables the function to discharge its duties as required by law and in fulfillment of its obligations to the company. In addition, the audit committee meets regularly with internal and external auditors without the presence of management.

Remuneration Committee

The remuneration committee reviews the remuneration of directors and senior management and determines the structure and content of the senior executives' remuneration packages by reference to a number of factors including current business practice and our prevailing business conditions and the mining and exploration industry. The remuneration committee is committed to the principles of accountability and transparency, and to ensuring that remuneration arrangements align reward with performance. The remuneration committee is guided by its terms of reference. The members of the remuneration committee are Mr. N.P. Cole Jr. (chairman), Dr. K. Voltaire, Mr. C.L. Coleman and Mr. A.J. Quinn.

The remuneration committee's responsibilities include:

• Determining the remuneration policy and its specific application to the executive directors, as well as its general application to the senior executives below the main board;

- The determination of levels of reward for the executive directors;

• Providing guidance on evaluating the performance of the CEO, management development plans and succession planning;

- Awards to be made under the Restricted Share Scheme and the Co-Investment Plan; and

• Communication with shareholders on the remuneration policy and the remuneration committee's work on behalf of the board.

Table of Contents

Governance and Nomination Committee

The governance and nomination committee's function is to assist the board in identifying qualified individuals who are willing and have the necessary independence and skills to act as directors of the company and be members of the board's committees. The committee also develops and monitors a process for evaluating the board's effectiveness and oversees the company's Code of Conduct. The governance and nomination committee is guided by its terms of reference. In addition, the committee at the request of the board, interviews and recruits any future board members. The members of the governance and nomination committee are Messrs. C. Coleman (chairman), N.P. Cole, Jr. (senior independent non-executive director), Dr. K. Dagdelen and Mr. J. Kassum.

The governance and nomination committee's responsibilities include:

• Reviewing the structure, size and composition of the board and making recommendations to the board with regard to any desired changes;

• Identifying, evaluating and recommending, for board approval, candidates to fill board vacancies as and when they arise;

• Making recommendations to the board with regard to membership of the audit committee and remuneration committee and any other of the board's committees in consultation with the chairmen of those committees;

• Making recommendations on the constitution of the board to ensure there is a balanced board in terms of skills, knowledge, independence and experience;

- Succession planning for directors and other senior executives of the company;
- Assessing a director's potential conflict of interest and making recommendations to the board; and
- Making recommendations to the board concerning suitable candidates for the role of senior independent director.

D. EMPLOYEES

At the end of each of the past three years, the breakdown of employees, including our subsidiaries by main categories of activity was as follows:

	At December 31, 2012	2013	2014
Goukoto	53	163	151
Morila	415	397	302
Loulo	600	947	945
Tongon	410	533	449
Kibali	181	516	701
Total	1,742	2,556	2,548

E. SHARE OWNERSHIP

See “Item 7 – Major Shareholders and Related Party Transactions”.

Employee Share Option Scheme

Since 1996, we have operated a share option scheme under which senior management may be offered options to purchase our ordinary shares. The aggregate number of shares available for issuance under the option scheme may not exceed 15% of our issued share capital. Share options granted since 2007 are subject to performance criteria for individual employees. Any options provided to an individual employee as defined by the rules of the scheme, are subject to an upper limit of 2% of our issued ordinary share capital.

Table of Contents

The exercise price of any new share options is determined as the closing price of the share on the trading day preceding that on which the person was granted the option.

The scheme provides for the early exercise of all options in the event of an acquisition of a number of shares that would require an offer to be made to all of our other shareholders.

No options were awarded to staff in terms of the Employee Share Option Scheme during 2014.

Restricted Share Scheme

On July 28, 2008, our shareholders approved the creation of a restricted share scheme for employees and executive directors. At that time, the board elected to limit eligibility for awards to executive directors. The board subsequently decided that all employees would be eligible to receive restricted shares. The aggregate number of shares available for issuance under the restricted share scheme may not exceed 5% of our issued share capital. The awards of shares under the restricted share scheme are subject to the attainment of performance criteria agreed with the remuneration committee.

Co-Investment Plan

Our Co-Investment Plan approved by shareholders on May 4, 2011, rewards sustained performance relative to global peers over a three year period.

To encourage longer-term alignment of executive director remuneration with shareholder interests, one third of any annual bonus earned is compulsorily deferred and paid in shares after three years under the Co-Investment Plan. Deferred bonuses are subject to clawback in the event of a material misstatement of the financial statements and accounts on which they were based. An executive director may also choose to commit further shares to the Co-Investment Plan, up to 200% of base salary in the case of the chief executive officer and up to 100% of base salary in the case of the chief financial officer. Committed shares must be retained for three years and may be matched, based on our relative total shareholder return performance over three years against the Euromoney Global Gold Index.

The Board, in its discretion, may grant awards under this Plan to any of our employees, including any executive director, who is required to devote substantially the whole of his working time to his employment or office, provided

that the employee agrees to retain shares for three years, as described above. In 2012, the board decided to extend the scheme to senior managers of the company.

CEO Performance Shares

At the 2013 annual general meeting, shareholders approved a one-off award of performance shares to D.M. Bristow. The vesting of the performance shares is subject to the achievement of the conditions set out below and D.M. Bristow continuing to hold office or employment with the company during the period of three years from April 29, 2013, the date of grant of the award of performance shares. See “CEO Performance Shares” above.

Item 7. Major Shareholders and Related Party Transactions

A. MAJOR SHAREHOLDERS

As of February 28, 2015, our issued share capital consisted of 92,905,916 ordinary shares with a par value of \$0.05 per share. To our knowledge we are not, directly or indirectly, owned or controlled by another corporation, any foreign government or other person.

The following table sets forth information regarding the beneficial ownership of our ordinary shares as of February 28, 2015, by:

Any person of whom the directors are aware that is interested directly or indirectly in 3% or more of our ordinary shares;

- Each of our directors; and
- All of our executive officers and directors as a group.

Beneficial ownership is determined in accordance with the rules of the SEC and generally includes voting or investment power with respect to securities. Ordinary shares issuable pursuant to options, to the extent the options are currently exercisable or convertible within 60 days of February 28, 2015, are treated as outstanding for computing the percentage of the person holding these securities but are not treated as outstanding for computing the percentage of any other person.

Unless otherwise noted, each person or group identified possesses sole voting and investment power with respect to the shares, subject to community property laws where applicable. Unless indicated otherwise, the business address of the beneficial owners is: Randgold Resources Limited, 3rd Floor Unity Chambers, 28 Halkett Street, St. Helier, Jersey JE2 4WJ, Channel Islands.

Table of Contents

- (1) Mrs. Ba-N'Daw was appointed to the board with effect from March 1, 2015.
- (2) Shares held by BNY (Nominees) Limited are held for and on behalf of our ADS holders. Wells Fargo & Company reported in its Schedule 13G/A filed with the Securities and Exchange Commission on July 31, 2014 that its beneficial ownership in us amounted to 4,505,304 ordinary shares (4.85%) on a consolidated (3) basis. These shares are included in the shares held by BNY (Nominees) Limited. Wells Fargo & Company reported that it has shared voting power with respect to 4,504,621 shares and shared dispositive power with respect to 4,505,221 shares. BlackRock Inc. reported in its Schedule 13G/A filed with the Securities and Exchange Commission on January 9, (4) 2015 that its beneficial ownership in us amounted to 16,006,603 ordinary shares (17.3%) on a consolidated basis. These shares are included in the shares held by BNY (Nominees) Limited. Van Eck Associates Corporation reported in its Schedule 13G/A filed with the Securities and Exchange (5) Commission on February 12, 2015 that its beneficial ownership in us amounted to 6,715,127 ordinary shares (7.25%) on a consolidated basis. These shares are included in the shares held by BNY (Nominees) Limited.
- (6) No director or executive officer beneficially owns in excess of 1% of the outstanding ordinary shares.

To the knowledge of management, none of the above shareholders hold voting rights which are different from those held by our other shareholders.

At December 31, 2014, a total of 49,116,762 ordinary shares (or 60.0 percent of issued ordinary share capital) were held by The Bank of New York Mellon as depositary for our American Depositary Receipt program. Each American Depositary Share (ADS) is equivalent to one ordinary share in the company. At December 31, 2014 the number of persons who were registered holders of ADSs was reported at 88. Randgold is aware that many ADSs are held of record by brokers and other nominees, and accordingly the above numbers are not necessarily representative of the actual number of persons who are beneficial holders of ADSs or the number of ADSs beneficially held by these persons.

All shareholders have the same voting rights.

As at December 31, 2014 there were 1,375 holders of record of our ordinary shares. Of these holders 5 had registered addresses in the United States and held a total of 11,226 ordinary shares, approximately 0.01% percent of the total outstanding shares. In addition, certain accounts of record with registered addresses outside the United States, including The Bank of New York Mellon, hold our ordinary shares in whole or in part, beneficially for United States persons.

At February 28, 2015 47,752,780 ADSs or approximately 51.4 percent of total issued share capital, were issued and outstanding and held of record by approximately 89 registered holders.

Insofar as is known to us, there was no person who, directly or indirectly, joint or severally, exercised or could exercise control over Randgold nor is Randgold aware of any arrangements which might result in a change of control of Randgold.

B. RELATED PARTY TRANSACTIONS

Other than as referred to below, none of our directors, officers or major shareholders or, to our knowledge, their families, had any interest, direct or indirect, in any transaction during the last fiscal year or in any proposed transaction which has affected or will materially affect us or our investment interests or subsidiaries. Refer to Note 20 on page F-46 of this Annual Report for details provided on related party transactions that existed on December 31, 2014.

The Randgold Name

Under an agreement dated June 26, 1997, Randgold & Exploration Group has licensed us to carry on business under the name “Randgold”. The license has been provided to us on a royalty free perpetual basis. The U.K. Trademark Registry granted a registration certificate to us for “Randgold” on February 16, 2001.

See Item 18.

Table of Contents**Item 9. The Offer and Listing****A. OFFER AND LISTING DETAILS**

The following table sets forth, for the periods indicated, the high and low sales prices of our ordinary shares, as reported by the London Stock Exchange, and of our ADSs, as reported by the NASDAQ Global Select Market. Effective March 10, 2003, we changed the ratio of ordinary shares to ADSs from two ordinary shares per ADS to one ordinary share per ADS, so that each ADS now represents one ordinary share. In March 2003 we changed the currency in which the price of our ordinary shares that are traded on the London Stock Exchange are quoted. The ordinary shares are now quoted in pound sterling and not in US dollars. The ADSs continue to be quoted on the London Stock Exchange and the NASDAQ Global Select Market in US dollars.

Financial Period Ended	Price Per Ordinary Share		Price Per ADS	
	High (£)	Low (£)	High (\$)	Low (\$)
December 31, 2014	52.35	36.08	89.89	58.00

B. PLAN OF DISTRIBUTION

Not applicable.

C. MARKETS

Our ordinary shares are listed on the London Stock Exchange, which currently constitutes the principal non-United States trading market for those shares, under the symbol RRS and our ADSs trade in the United States on the NASDAQ Global Select Market under the trading symbol GOLD, in the form of American Depositary Receipts. The American Depositary Receipts are issued by The Bank of New York Mellon, as Depositary. Each American Depositary Receipt represents one American Depositary Share. Each American Depositary Share represents one of our ordinary shares.

Item 10. Additional Information

A. SHARE CAPITAL

Not applicable.

B. MEMORANDUM AND ARTICLES OF ASSOCIATION

General

We are a company organized with limited liability under the laws of Jersey, Channel Islands. Our registered number is 62686.

The authorized share capital is \$6,000,000 divided into 120,000,000 ordinary shares of \$0.05 each, of which 92,905,216 were issued as at February 28, 2015 and 27,094,784 were available for issue.

Details of our Memorandum and Articles of Association are provided below.

Memorandum of Association

Clause 2 of our Memorandum of Association provides that we shall have unrestricted corporate capacity.

Changes in Capital or Objects and Powers

Subject to the Companies (Jersey) Law (the 1991 Law) and our Articles of Association, we may by special resolution at a general meeting:

- increase our authorized or paid up share capital;
- consolidate and divide all or any part of our shares (whether issued or not) into shares of a larger amount;
- sub-divide all or any part of our shares into shares of smaller amount than is fixed by our Memorandum of Association;
- convert any of our fully paid shares the nominal value of which is expressed in one currency into fully paid shares of a nominal value of another currency and denominate the nominal value of our issued or unissued shares in units of the currency into which they have been converted;
- convert any of our paid-up shares into stock, and reconvert any stock into any number of paid-up shares of any denomination;
- convert any of our existing non-redeemable shares (whether issued or not) into redeemable shares which can be redeemed;
- cancel shares which, at the date of passing of the resolution, have not been taken or agreed to be taken by any person, and diminish the amount of our share capital by the amount of the shares so cancelled;

- reduce the authorized share capital;

reduce our issued share capital, any capital redemption reserve, any share premium account or any other undistributable reserve in any way; or

- alter our Memorandum of Association or Articles of Association.

- 108 -

Table of Contents

Articles of Association

We last updated our Articles of Association following our annual general meeting on May 3, 2011, where we adopted by special resolution a modern set of articles that a London Stock Exchange listed company should have. At the same time, changes were made to reflect new requirements imposed by the United Kingdom Listing Authority on “premium listed” companies.

The shareholders will be asked at our 2015 general meeting to be held on May 5, 2015 to approve a number of amendments to the Articles of Association: (i) relating to the payment of scrip dividends; (ii) to allow the company to supply notices, documents or information by means of a website (or other electronic means), rather than by sending printed copies to shareholders; and (iii) to bring the Articles of Association in line with the procedure historically adopted to pay the non-executive director’s fees partly in shares.

General Meeting of Shareholders

We may at any time convene general meetings of shareholders. We are required to hold an annual general meeting once every year. No more than fifteen months may elapse between the date of one annual general meeting and the next.

Annual general meetings require twenty business days’ notice of the place, day and time of the meeting in writing or in an electronic communication to our shareholders. Any other general meeting (called an extraordinary general meeting) requires no less than fourteen clear days’ notice in writing or in an electronic communication. In addition, provided that it has been authorized by an ordinary resolution of shareholders and certain other requirements are complied with, a notice may instead of being sent to shareholders, be published on our website. Our business may be transacted at a general meeting only when a quorum of shareholders is present. Two persons entitled to attend and to vote on the business to be transacted, each being a member or a proxy for a member or a duly authorized representative of a corporation which is a member, constitute a quorum. NASDAQ’s Global Select Market’s marketplace rules, which apply to all companies listed on the NASDAQ Global Select Market, state in Rule 4350(f) that the minimum quorum for any meeting of holders of a company’s common stock is 33 % of the outstanding shares.

As a result, we requested, and the NASDAQ Global Select Market granted to us, an exemption from compliance with the Rule 4350(f) requirement.

The annual general meetings deal with and dispose of all matters prescribed by our Articles of Association and by the 1991 Law including:

the consideration of our annual financial statements and report of our independent accountants;

the election of directors; and

the appointment of independent auditors.

Voting Rights

Subject to any special terms as to voting on which any shares may have been issued or may from time to time be held, at a general meeting, every shareholder who is present in person (including any corporation present by its duly authorized representative) shall on a show of hands have one vote and every shareholder present in person or by proxy shall on a poll have one vote for each share of which he is a holder. In the case of joint holders, the vote of the senior who tenders a vote, whether in person or by proxy, shall be accepted to the exclusion of the votes of the other joint holders. The Articles of Association include a new provision that for as long as our shares are admitted to trading on the London Stock Exchange or on the NASDAQ Global Select Market, at any general meeting a resolution put to the meeting shall be decided on a poll.

Unless we otherwise determine, no shareholder is entitled to vote at a general meeting or at a separate meeting of the holders of any class of shares, either in person or by proxy, or to exercise any other right or privilege as a shareholder in respect of any share held by him unless all calls presently payable by him in respect of that share, whether alone or jointly with any other person, together with interest and expenses, if any, have been paid to us.

Table of Contents

Dividends

Subject to the provisions of the 1991 Law and of the Articles of Association, we may, by ordinary resolution, declare dividends to be paid to shareholders according to their respective rights and interests in our profits. However, no dividend shall exceed the amount recommended by us. Subject to the provisions of the 1991 Law, we may pay an interim dividend, including a dividend payable at a fixed rate, if an interim dividend appears to us to be justified by our distributable reserves.

Except as otherwise provided by the rights attached to any shares, all dividends shall be declared and paid according to the amounts paid up, otherwise than in advance of calls, on the shares on which the dividend is paid. All dividends, interest or other sum payable and unclaimed for 12 months after having become payable may be invested or otherwise made use of by the board for our benefit until claimed. All dividends unclaimed for a period of 12 years after having been declared or become due for payment shall, if we so resolve, be forfeited and shall cease to remain owing by us.

We may, with the authority of an ordinary resolution, direct that payment of any dividend declared may be satisfied wholly or partly by the distribution of assets, and in particular of paid up shares of the company or by the distribution of assets, or in any one or more of those ways.

We may also with the prior authority of an ordinary resolution, and subject to such conditions as we may determine, offer to holders of shares the right to elect to receive new shares, credited as fully paid, instead of the whole, or some part, to be determined by us, of any dividend specified by the ordinary resolution.

The Board has discretion under the Articles of Association to pay dividends in a currency other than US dollars.

Ownership Limitations

Our Articles of Association and the 1991 Law do not contain limits on the number of shares that a shareholder may own.

Distribution of Assets on a Winding-Up

If we are wound up, we may, with the sanction of a special resolution and any other sanction required by law, divide among the shareholders in specie the whole or any part of our assets provided that no shareholder shall be compelled to accept any assets upon which there is a liability. For that purpose, the liquidator, or the directors (where there is no liquidator) may value any assets and determine how the dividend shall be carried out as between the shareholders or vest the whole or any part of the assets in trustees on such trusts for the benefit of the shareholders.

Transfer of Shares

Every shareholder may transfer all or any of his shares by instrument of transfer in writing in any usual form or in any form approved by us. The instrument must be executed by or on behalf of the transferor and, in the case of a transfer of a share which is not fully paid up, by or on behalf of the transferee. The transferor is deemed to remain the holder until the transferee's name is entered in the register of shareholders.

We may, in exceptional circumstances approved by the Financial Conduct Authority, refuse to register the transfer of shares provided that such refusal would not disturb the market in those shares. Subject to the requirements of the Financial Conduct Authority, we may, in our absolute discretion and without giving any reason, refuse to register any transfer of a certificated share on which we have a lien, provided that where any such shares are admitted to the Official List of the United Kingdom Listing Authority such discretion may not be exercised in a way which the Financial Conduct Authority or the London Stock Exchange regards as preventing dealings in the shares of the relevant class or classes from taking place on an open or proper basis.

We may also refuse to register a transfer of certificated shares unless the instrument of transfer is:

Table of Contents

lodged at the registered office of the Company for the time being or another place that we may from time to time determine accompanied by the certificate for the shares to which it relates and any other evidence as we may reasonably require to show the right of the transferor to make the transfer;

- it is in respect of only one class of shares; and
- in favor of not more than four transferees.

Unless otherwise permitted by the Companies (Uncertificated Securities) (Jersey) Order 1999, we may not close any register relating to a participating security without the consent of the approved operator of the relevant system.

Variation of Rights

If at any time our share capital is divided into shares of different classes, any of the rights for the time being attached to any share or class of shares may be varied or abrogated in the manner, if any, that is provided by the rights or, in the absence of any such provision, either with the consent in writing of the holders of a majority in nominal value of the issued shares of the class or with the sanction of an ordinary resolution passed at a separate meeting of the holders of the issued shares of that class. The quorum at that meeting shall be persons holding or representing by proxy at least one-third in nominal value of the issued shares of the class in question and at an adjourned meeting, if a quorum as stated is not present, the shareholders that are present shall be a quorum.

The special rights conferred upon the holders of any shares of class of shares issued with preferred, deferred or other special rights shall (unless otherwise expressly provided by the terms of issue of such shares or under the Articles of Association) be deemed not to be varied or abrogated by the creation or issue of further shares or further classes of shares ranking *pari passu* therewith.

Capital Calls

Subject to the terms of allotment of shares, we may from time to time make calls on the members in respect of any monies unpaid on the shares, whether in respect of nominal value or premium, and not payable on a fixed date. A member must receive fourteen days' notice of any call and any call is deemed to be made when the resolution of the board authorizing such call was passed.

If any call is not paid on or before the date appointed for payment, the person liable to pay that call shall pay interest on the amount unpaid from the day upon which it became due and payable until it and any expenses incurred by us as a result of the non-payment are paid at the HSBC bank's base rate plus two per cent. per annum or the rate fixed by the terms of the allotment of the share such amount of interest as we may determine provided that we may waive payment of the interest wholly in part.

Unless we otherwise determine, no member shall be entitled to receive any dividend or to be present or to vote, either in person or by proxy, at any general meeting or at a separate meeting of the holders of a class of shares or on a poll, or be included in a quorum, or to exercise other rights conferred by membership in relation to the meeting or poll, unless and until any outstanding calls in respect of his shares are paid.

Borrowing Powers

We may exercise all of our powers to borrow money and to mortgage or charge all or any part of our undertaking, property and assets, present and future, and uncalled capital and, subject to the provisions of the 1991 Law and the Articles of Association, to issue debentures and other loan stock and other securities, whether outright or as collateral security for any debt, liability or obligation of ours or of any third party.

Issue of Shares and Preemptive Rights

Subject to the provisions of the 1991 Law and subject to and without prejudice to any rights attached to any shares, we may issue shares with any rights or restrictions attached to them as we may from time to time determine by ordinary resolution, or if no ordinary resolution has been passed or an ordinary resolution does not make specific provision, as we may determine. Subject to provisions of the 1991 Law, we may issue shares that are redeemable or are liable to be redeemed at our option or the option of the holder holding such redeemable shares. Subject to the provisions of the 1991 Law the unissued shares at the date of adoption of the Articles of Association and shares created thereafter shall be at our disposal. We cannot issue shares at a discount.

Table of Contents

The Articles of Association contain pre-emption rights. Before allotting any Equity Securities (as defined in the Articles of Association) such Equity Securities are to be offered to holders of ordinary shares on the same or more favorable terms and in the same proportion of those shares in nominal value held by the holder of the ordinary shares. Equity Securities shall not be allotted unless the period during which any such offer may be accepted by the relevant current holders has expired or we have received notice of the acceptance or refusal of every offer made to holders. Pre-emption rights do not apply where a shareholder has renounced his right for those allotted shares, shares are to be allotted under an Employee Share Scheme, shares are to be allotted otherwise for cash or the allotment is in relation to an issue of bonus shares. Shareholders must have a period of at least fourteen days in which to accept the offer and the offer may not be withdrawn within this period. The pre-emption rights may be disapplied by a special resolution for the allotment of Equity Securities wholly for cash either generally or in respect of a specific allotment where the authority granted pursuant to the special resolution is for a certain period of time. A proposed special resolution disapplying the pre-emption rights must be recommended by the directors who must give the shareholders their reasons for making the recommendations and if known, the amount to be paid to us in respect of the Equity Securities to be allotted.

Interests in Shares

We can give notice to any person who is interested in shares or who has been interested in the shares at any time during the three years preceding the date on which the disclosure notice is issued. If the interested party holds less than 0.25% of shares in a class and does not provide the information requested by us within a reasonable time, the shareholder shall not be entitled to attend or vote at any general meeting. If the interested party holds at least 0.25% of shares in a class and does not provide the information requested by us within a reasonable time, the shareholder shall not be entitled to (i) attend or vote at any general meeting; (ii) receive dividends; (iii) be allotted shares in lieu of dividends; and (iv) transfer shares. Notwithstanding these prohibitions, the interested party can still trade his shares on the London Stock Exchange.

The Articles of Association provide that if at any time we have a class of shares admitted to trading on the London Stock Exchange, we must comply with the vote holder and issuer notification rules set out in Rule 5 of the UK Disclosure Rules and Transparency Rules (DTRs), which shall apply to us and our shareholders. Shareholders have to make notifications of changes in major shareholdings. Sanctions imposed where the provisions of Rule 5 of the DTRs are not followed included suspension of voting and/or dividend rights.

Directors obliged to notify us of their shareholding in the Company

The Articles of Association incorporate the requirements of Rule 3 of the DTRs and directors are obliged to notify us of their shareholding. A director is also required to notify us of any increase in the number of shares he holds and if he disposes of any shares. Notification must also be given by a director where he has entered into an option or warrant to acquire or dispose of shares. The notification obligation is quite wide as it also extends to any shares held by a

director's spouse or civil law partner; child or step-child, and any of their siblings; and any relative of a director who has shared the same household with the director over 12 months preceding the director's appointment. A director is also required to notify us if he or any of his family members' hold 33% of the voting rights of a corporate entity. We are also under an obligation to use our reasonable endeavors to procure that the directors and those discharging managerial responsibilities and their connected persons comply with Rule 3 of the DTRs.

Meetings of the Board of Directors

Any director may, and the secretary at the request of a director shall, call a board meeting at any time. Notice is deemed to be duly given to a director if it is given to him personally, by word of mouth, by electronic communication or in writing. A director may waive this notice requirement, either prospectively or retrospectively.

- 112 -

Table of Contents

Subject to our Articles of Association the board of directors may meet for the conducting of business, adjourn and otherwise regulate its proceedings as it sees fit. The quorum necessary for the transaction of business may be determined by the board of directors and unless otherwise determined shall be two directors. A duly convened meeting of the board of directors at which a quorum is present is necessary to exercise all or any of the board's authorities, powers and discretions.

The board of directors may delegate to any director holding an executive office any of its powers, authorities and discretions for such time, on such terms and subject to such conditions as it sees fit. In particular, it may grant the power to sub-delegate and may retain or exclude the right of the board to exercise the delegated powers, authorities or discretions collaterally with the director. Such delegation can be revoked at any time or its terms and conditions altered. The board of directors may also delegate any of its powers, authorities and discretions for such time and on such terms and subject to such conditions as it sees fit to any committee consisting of one or more directors (if thought fit) one or more other persons, or to a person who need not be a director. The powers, authorities and discretions that the board of directors may delegate, may include all powers and discretions whose exercise involves or may involve the payment of remuneration or the conferring of any other benefit on all or any of the directors.

Any person, committee or sub-committee to whom the board of directors has delegated powers, shall in exercising such powers conform to any regulations or charters which may from time to time be imposed by the board and which may provide for members of the committee who are not directors to have voting rights as members of the committee / sub-committee but so that (a) the number of members who are not directors shall not be less than one-half of the total number of members of the committee / sub-committee and (b) no resolution of the committee / sub-committee shall be effective unless a majority of the members of the committee / sub-committee present throughout the meeting are directors.

The Articles of Association contain provisions setting out in general terms the power of the Board to delegate its powers.

Remuneration of Directors

Our directors shall be entitled to receive by way of fees for their services as directors any sum that we may from time to time determine, not exceeding in aggregate \$1,500,000 per annum or any other sum as we, by ordinary resolution in a general meeting, shall from time to time determine. That sum, unless otherwise directed by ordinary resolution of us by which it is voted, shall be divided among the non-executive directors in the proportions and in the manner that the board determines or, if the board has not made a determination, equally. The directors are entitled to be repaid all traveling, hotel and other expenses properly incurred by them in or about the performance of their duties as directors.

Subject to the 1991 Law, the Articles of Association and the requirements of the London Stock Exchange and any other relevant stock exchange, the board of directors may now arrange for part of a fee payable to a director to be provided in the form of fully-paid shares in our capital. The amount of the fee payable will be at the board's discretion and shall be applied in the purchase or subscription of shares on behalf of the relevant director. In the case of a subscription of shares, the subscription price per share shall be deemed to be the closing middle-market quotation for a fully paid share of the Company of that class as published in the Daily Official List of the NASDAQ Global Select Market (or such other quotation derived from such other source as the board of directors may deem appropriate) on the day of subscription.

The salary or remuneration of any director appointed to hold any employment or executive office may be either a fixed sum of money, or may altogether or in part be governed by business done or profits made or otherwise determined by the board of directors, and may be in addition to or in lieu of any fee payable to him for his services as director.

Pensions and Gratuities for Directors

We may exercise all of our powers to provide and maintain pensions, other retirement or superannuation benefits, death or disability benefits or other allowances or gratuities for persons who are or were directors of any company in our group and their relatives or dependents. For this purpose, the board of directors may establish, maintain, subscribe and contribute to any scheme, trust or fund and pay premiums.

Table of Contents

Directors' Interests in Contracts

Subject to the provisions of the 1991 Law and provided that his interest is disclosed as soon as practicable after a director becomes aware of the circumstances which gave rise to his duty to disclose in accordance with the Articles of Association, a director, notwithstanding his office, may enter into or otherwise be interested in any contract, arrangement, transaction or proposal with us, or in which we are otherwise interested, may hold any other office or place of profit under us (except that of auditor of, or of a subsidiary of ours) in conjunction with the office of director and may act by himself or through his firm in a professional capacity for us, and in any such case on such terms as to remuneration and otherwise as we may arrange, and may be a director or other officer of, or employed by, or a party to any transaction or arrangement with, or otherwise interested in, any company promoted by us or in which we are otherwise interested and shall not be liable to account to us for any profit, remuneration or other benefit realized by any such office, employment, contract, arrangement, transaction or proposal.

No such contract, arrangement, transaction or proposal shall be avoided on the grounds of any such interest or benefit.

Restrictions on Directors' Voting

Except as provided in our Articles of Association, a director shall not vote on, or be counted in the quorum in relation to, any resolution of the board or of a committee of the board concerning any contract, arrangement, transaction or any other proposal whatsoever to which we are or any of our subsidiary undertakings are or will be a party and in which he has an interest which is to his knowledge a material interest (otherwise than by virtue of his interests in shares or debentures or other securities of or otherwise in or through us), unless the resolution concerns any of the following matters:

the giving of any guarantee, security, or indemnity in respect of money lent or obligations incurred by him or any other person at the request of or for the benefit of us or any of our subsidiary undertakings;

the giving of any guarantee, security or indemnity in respect of a debt or obligation of ours or any of our subsidiary undertakings for which he himself has assumed responsibility in whole or in part either alone or jointly with others under a guarantee or indemnity or by the giving of security;

a contract, arrangement, transaction or proposal concerning an offer of shares or debentures or other securities of or by us or any of our subsidiary undertakings in which offer he is or may be entitled to participate as a holder of securities or in the underwriting or sub-underwriting of which he is to participate;

a contract, arrangement, transaction or proposal to which we are or will be a party concerning another company (including any of our subsidiary undertakings) in which he, is interested (directly or indirectly) whether as an officer, shareholder, creditor or otherwise (a “relevant company”), if he does not hold an interest in five per cent. or more of either any class of the equity share capital of or the voting rights in the relevant company;

a contract, arrangement, transaction or proposal for the benefit of our employees or any of our subsidiary undertakings (including any pension fund or retirement, death or disability scheme) which does not award him a privilege or benefit not generally awarded to the employees to whom it relates; and

a contract, arrangement, transaction or proposal concerning the purchase or maintenance of any insurance policy for the benefit of directors or for the benefit of persons including directors.

A director shall not vote or be counted in the quorum for any resolution of the board or committee of the board concerning his own appointment (including fixing or varying the terms of his appointment or termination) as the holder of any office or place of profit with us or any company in which we are interested.

Table of Contents

Number of Directors

Unless and until otherwise determined by a special resolution, the number of directors shall be not fewer than two or more than 20.

Directors' Appointment and Retirement by Rotation

Directors may be appointed by ordinary shareholder resolution or by the board. A director appointed by the board shall hold office only until the next annual general meeting and shall not be taken into account in determining the number of directors who are to retire by rotation. A director shall not be required to hold any of our shares.

In accordance with the Articles of Association directors are to retire and offer themselves for re-election (should they chose to do so) at each annual general meeting of the company.

Directors do not have power to appoint alternate directors.

Untraced Shareholders

Subject to the Companies (Uncertificated Securities) (Jersey) Order 1999, we may sell any of our shares registered in the name of a shareholder remaining untraced for 12 years who fails to communicate with us following advertisement of an intention to make such a disposal. Until we can account to the shareholder, the net proceeds of sale will be available for use in our business or for investment, in either case at our discretion. The proceeds will not carry interest and we are not required to account for money earned on it.

CREST

The Companies (Amendment No. 4) (Jersey) Law 1998 and the Companies (Uncertificated Securities) (Jersey) Order 1999 allow the holding and transfer of shares under CREST, the electronic system for settlement of securities in the United Kingdom. Our Articles of Association provide for our shares to be held in uncertificated form in accordance with the Companies (Uncertificated Securities) (Jersey) Order 1999.

Purchase of Shares

Subject to the provisions of the 1991 Law, we may purchase any of our own shares of any class, including redeemable shares. The 1991 Law provides that we may, by special resolution approve the acquisition of our own shares from any source, but only if they are fully paid.

Non-Jersey Shareholders

There are no limitations imposed by Jersey law or by our Articles of Association on the rights of non-Jersey shareholders to hold or vote on our ordinary shares or securities convertible into our ordinary shares.

Rights of Minority Shareholders and Fiduciary Duties

Majority shareholders of Jersey companies have no fiduciary obligations under Jersey law to minority shareholders. However, under the 1991 Law, a shareholder may, under some circumstances, seek relief from the court if he has been unfairly prejudiced by us. The provisions of the 1991 Law are designed to provide relief from oppressed shareholders without necessarily overriding the majority's decision. There may also be common law personal actions available to our shareholders.

Jersey Law and Our Memorandum and Articles of Association

The content of our Memorandum and Articles of Association is largely derived from an established body of corporate law and therefore they mirror the 1991 Law. Jersey company law draws very heavily from company law in England and there are various similarities between the 1991 Law and the English Companies Act 2006. However, the 1991 Law is considerably shorter in content than the English statutes and there are some notable differences between English and Jersey company law. There are, for example, no provisions under Jersey law or regulations (as there are under English law or regulations):

Table of Contents

- controlling possible conflicts of interests between us and our directors, such as loans by us or directors, directors' service contracts, substantial property transactions and contracts between us and our directors other than a duty on directors to disclose an interest in any transaction to be entered into by us or any of our subsidiaries which to a material extent conflicts with our interest;

specifically requiring particulars to be shown in our accounts of the amount of loans to officers or directors' emoluments and pensions, although these would probably be required to be shown in our accounts in conformity to the requirement that accounts must be prepared in accordance with generally accepted accounting principles;

- requiring us to file details of charges other than charges of Jersey realty;
- as regards statutory preemption provisions in relation to further issues of shares.
- prohibiting the giving of financial assistance by public companies; or
- requiring compliance with Rule 5 of the DTRs.

Under Article 143 of the 1991 Law, the court may make an order giving relief, including regulation of our affairs requiring us to refrain from doing or continuing to do an act complained of, authorizing civil proceedings and providing for the purchase of shares by any of our other shareholders and any other consequential orders.

The court has wide powers within its inherent jurisdiction and a shareholder could successfully bring an action in a variety of circumstances. Although there is no statutory definition of unfairly prejudicial conduct, authority suggests that it includes oppression and discrimination and that the test is objective.

There are no provisions in our Memorandum or Articles of Association concerning changes of capital where these provisions would be considered more restrictive than that required by the 1991 Law.

C. MATERIAL CONTRACTS

1. Executive Service Agreement between Randgold Resources Limited and Dennis Mark Bristow, dated June 13, 2011, as amended by the Variation to the Service Agreement between Randgold Resources and Dennis Mark Bristow dated January 28, 2013.

We entered into an employment contract with Dr. Bristow in respect of his position as Chief Executive Officer. Pursuant to the employment contract, Dr. Bristow's employment will continue for an indefinite period unless terminated by either party upon not less than six months' prior written notice. The employment contract provides that Dr. Bristow's salary is \$1,575,000 per annum, subject to review by the board of directors annually. In addition, the employment contract provides that Dr. Bristow is eligible to participate in the Randgold Resources Limited Annual Bonus Plan, and that the board of directors will consult with Dr. Bristow with respect to the establishment of performance targets and goals under the Annual Bonus Plan.

2. Executive Service Agreement between Randgold Resources Limited and Graham P. Shuttleworth, dated June 13, 2011, as amended by the Variation to the Executive Service Agreement between Randgold Resources and Graham P. Shuttleworth dated January 28, 2013.

We entered into an employment contract with Mr. Shuttleworth in respect of his position as Chief Financial Officer. Pursuant to the employment contract, Mr. Shuttleworth's employment will continue for an indefinite period unless terminated by either party upon not less than six months' prior written notice. The employment contract provides that Mr. Shuttleworth's salary is £495,600 per annum, subject to review by the board of directors annually. In addition, the employment contract provides that Mr. Shuttleworth is eligible to participate in the Randgold Resources Limited Annual Bonus Plan, and that the board of directors will consult with Mr. Shuttleworth with respect to the establishment of performance targets and goals under the Annual Bonus Plan.

3. Appointment letters with our non-executive directors: (i) Appointment Letter, dated January 28, 2013, between Randgold Resources Limited and Jeanine Mabunda Lioko, (ii) Appointment Letter, dated January 31, 2014, between Randgold Resources Limited and Jemal-ud-din Kassum and (iii) Appointment Letter, dated March 1, 2015, between Randgold Resources Limited and Safiatou Francoise Ba-N'Daw.

Pursuant to the appointment letters with the non-executive directors, each non-executive director's appointment as a non-executive director is contingent upon re-election at the forthcoming annual general meetings and the appointment is terminable by either party upon three months' notice. The appointment letters provide that a non-executive director is entitled to receive a fee of \$60,000 per year (payable half yearly in arrears). In addition, if a non-executive director is appointed to serve on a board committee, the fees payable will be as follows: Audit Committee—\$35,000 per year; Remuneration Committee—\$25,000 per year; Nomination & Governance Committee—\$10,000 per year, and the chairman of a board committee is entitled to receive an additional premium to the committee assignment fee of \$20,000 per year. Each non-executive director shall receive 1,200 ordinary shares in the company per year subject to approval of shareholders at the company's annual general meeting. Mr. Cole's appointment letter provides that in

Table of Contents

addition, as the appointed senior independent director and in lieu of any committee assignment fee, he will receive an additional \$85,000.

4. Deeds of indemnity: (i) Deed of Indemnity, dated April 30, 2012, between Randgold Resources Limited and Andrew Quinn, (ii) Deed of Indemnity, dated January 28, 2013, between Randgold Resources Limited and Jeanine Mabunda Lioko, (iii) Deed of Indemnity, dated January 31, 2014, between Randgold Resources Limited and Jemal-ud-din Kassum and (iv) Deed of Indemnity, dated March 1, 2015, between Randgold Resources Limited and Safiatou Ba-N'Daw.

We entered into a deed of indemnity with Andrew Quinn pursuant to which the company shall indemnify Mr. Quinn for claims, liabilities, costs charges, expenses or losses which may be made against him or which he may incur as a result of his directorship, subject to certain exclusions and limitations.

We entered into a deed of indemnity with Jeanine Mabunda Lioko pursuant to which the company shall indemnify Mrs. Mabunda Lioko for claims, liabilities, costs charges, expenses or losses which may be made against her or which she may incur as a result of her directorship, subject to certain exclusions and limitations.

We entered into a deed of indemnity with Jemal-ud-din Kassum pursuant to which the company shall indemnify Mr. Kassum for claims, liabilities, costs charges, expenses or losses which may be made against him or which he may incur as a result of his directorship, subject to certain exclusions and limitations.

We entered into a deed of indemnity with Safiatou Ba-N'Daw pursuant to which the company shall indemnify Mrs. Ba-N'Daw for claims, liabilities, costs charges, expenses or losses which may be made against her or which she may incur as a result of her directorship, subject to certain exclusions and limitations.

5. Facility Agreement dated December 17, 2014 between Randgold Resources Limited, HSBC Bank PLC and other financial institutions.

Table of Contents

We entered into a \$400.0 million unsecured revolving credit facility with HSBC and a syndicate of other banks which matures in May 2016 and is at present undrawn. The interest rate, if drawn, would be LIBOR plus 1.5% per annum based on the company's current level of leverage. The facility includes financial covenants in respect of EBIT, EBITDA, net finance charges, tangible net worth, total debt, debt cover and interest cover.

D. EXCHANGE CONTROLS

There are currently no Jersey or United Kingdom foreign exchange control restrictions on the payment of dividends on our ordinary shares or on the conduct of our operations. Jersey is in a monetary union with the United Kingdom. There are currently no limitations under Jersey law or our Articles of Association prohibiting persons who are not residents or nationals of the United Kingdom from freely holding, voting or transferring our ordinary shares in the same manner as United Kingdom residents or nationals.

E. TAXATION

Material Jersey Tax Consequences

General

The following summary of the anticipated tax treatment in Jersey in relation to the payments on the ordinary shares and ADSs is based on the taxation law and practice as it is understood to apply at the date of this Annual Report, and does not constitute legal or tax advice and does not address all aspects of Jersey tax law and practice (including such tax law and practice as it applies to any land or building situated in Jersey). Prospective investors should be aware that the relevant fiscal rules and practice and their interpretation may change. We encourage you to consult your own professional advisers on the implications of subscribing or buying, holding, selling, redeeming or disposing of ordinary shares or ADSs and the receipt of interest and distributions, whether or not on a winding-up, with respect to the ordinary shares or ADSs under the laws of any jurisdiction in which they may be liable to taxation.

We are subject to Jersey income tax at the rate of zero percent in accordance with the Income Tax (Jersey) Law 1961, as amended (Income Tax Law).

The Income Tax Law provides that the standard rate of income tax on profits of a non-financial service company regarded as resident in Jersey or having a permanent establishment in Jersey will be zero percent.

As a non-financial service company subject to tax at the rate of zero percent, we will not be liable for Jersey income tax other than on income arising from Jersey land or property.

Currently, there is no double tax treaty or similar convention between the United States and Jersey although on December 13, 2013, Jersey and the United States signed an agreement to improve international tax compliance and to implement the US Foreign Account Tax Compliance Act (FATCA). FATCA applies to financial institutions outside the United States. Under the relevant provisions of FATCA we are a non-financial foreign entity and as such we have no obligation under FATCA.

Goods and Services Tax

Jersey has a tax on goods and services supplied in the island (GST). GST is not chargeable on supplies of goods and/or services made by us outside of Jersey and we will only incur GST on goods and/or services provided to us by GST registered businesses in Jersey.

Taxation of Dividends

Dividends are declared and paid gross in US dollars although under the Articles of Association, dividends may be payable in a currency other than US dollars. Under the existing Jersey law, payments in respect of the ordinary shares and ADSs, whether by dividend or other distribution paid to shareholders (other than to residents in Jersey), will not be subject to any taxation in Jersey and no withholding in respect of taxation will be required on those payments to any holder of our ordinary shares or ADSs.

Table of Contents

Prior to 2012, the Income Tax Law made provision for the taxation of an individual who is a shareholder or ultimate beneficial owner resident in Jersey who owns 2% or more of the shares of a company resident in Jersey or with a permanent establishment in Jersey, however with effect from January 1, 2012 these rules have been repealed. New anti-avoidance rules came into force from January 1, 2013 which extend the range of what is a potentially taxable distribution from a Jersey resident company to Jersey resident shareholders and this may now include repayment of loan principal, proceeds received in the course of winding up, share repurchase/redemption, etc.

Taxation of Capital Gains and Estate and Gift Tax

Under current Jersey law, there are no death or estate duties, capital gains, gift, wealth, inheritance or capital transfer taxes. No stamp duty or other transfer tax is levied in Jersey on the issue or transfer of ordinary shares or ADSs unless such transfer conveys the right to occupy Jersey land. Probate Stamp Duty (PSD) is charged on the application for Grants of Probate and Letters of Administration. For individuals domiciled in Jersey, the whole of their estate is subject to PSD, while for individuals domiciled outside of Jersey, just their Jersey situs assets (including shares in Jersey companies) are subject to PSD. The current rates of PSD are:

- on estates which do not exceed £10,000 no PSD is due;
- on estates of more than £10,000, but which do not exceed £100,000, PSD is due at the rate of 0.5%; and
- on estates of more than £100,000, PSD of £500 is due in respect of the first £100,000 of value and then 0.75% on the value of the estate exceeding £100,000, however total PSD may not exceed £100,000, which equates to an estate worth £13,360,000.

Material United States Federal Income Tax Consequences

The following summary describes the material US federal income tax consequences to US holders (as defined below) arising from the purchase, ownership and disposition of our ordinary shares or ADSs. This summary is based on the provisions of the Internal Revenue Code of 1986, as amended, which we refer to as the Code, final, temporary and proposed US Treasury Regulations promulgated under the Code, and administrative and judicial interpretations of the Code and the US Treasury Regulations, all as in effect as of the date of this summary, and all of which are subject to change, possibly with retroactive effect. In addition, this discussion assumes that the representations contained in the deposit agreement are true and that the obligations in the deposit agreement and any related agreement have been and will be complied with in accordance with their terms.

This summary has no binding effect or official status of any kind; there can be no assurance that the conclusions reached below would be sustained by a court if challenged by the US Internal Revenue Service.

For purposes of this discussion, a “US holder” is a holder of our ordinary shares or ADSs that is a beneficial owner of such shares or ADSs and is:

- a US citizen;
- an individual resident in the United States for US federal income tax purposes;
- a domestic corporation, or other entity taxable as a corporation, organized under the laws of the United States or of any US state or the District of Columbia;
- an estate the income of which is includible in its gross income for US federal income tax purposes without regard to its source; or
- a trust, if either: a US court is able to exercise primary supervision over the administration of the trust and one or more US persons have the authority to control all the substantial decisions of the trust, or the trust has a valid election in effect under applicable US Treasury Regulations to be treated as a US person.

This summary does not address all aspects of US federal income taxation that may be relevant to particular US holders in light of their particular circumstances, or to US holders subject to special rules, including, without limitation:

Table of Contents

- retirement plans;
- insurance companies;
- persons that hold ordinary shares or ADSs as part of a “straddle,” “synthetic security,” “hedge,” “conversion transaction” or other integrated investment;
- persons that enter into “constructive sales” involving our ordinary shares or ADSs or substantially identical property with other transactions;
- persons whose functional currency is not the US Dollar;
- expatriates or former long-term residents of the United States;
- financial institutions;
- dealers in securities or currencies;
- tax-exempt organizations;
- persons that own, actually or constructively, 10% or more of our outstanding voting stock;
- persons subject to the alternative minimum tax;
- regulated investment companies;

- real estate investment trusts;
- persons who trade in securities who elect to apply a mark-to-market method of accounting; and
- persons who acquired their shares or ADSs pursuant to the exercise of employee stock options or otherwise as compensation.

In addition, this summary does not address the effect of any applicable US state, local or non-US tax laws or any federal estate or gift tax consequences, does not consider the tax treatment of persons who own our ordinary shares or ADSs through a partnership or other pass-through entity, and deals only with ordinary shares or ADSs held by US holders as “capital assets” as defined in Section 1221 of the Code. If a partnership (including for this purpose, any entity treated as a partnership for US federal income tax purposes) holds shares or ADSs, the tax treatment of a partner generally will depend upon the status of the partner and the activities of the partnership. If a US holder is a partner in a partnership that holds shares or ADSs, the holder is urged to consult its own tax advisor regarding the specific tax consequences of the ownership and disposition of the shares or ADSs.

We encourage holders of our ordinary shares or ADSs to consult with their own tax advisors with respect to the US federal, state and local tax consequences, as well as the tax consequences in other jurisdictions, of the purchase, ownership and disposition of our ordinary shares or ADSs applicable in their particular tax situations.

Ownership of Ordinary Shares or ADSs

For purposes of the Code, US holders of ADSs should be treated for US federal income tax purposes as the owner of the ordinary shares represented by those ADSs. Accordingly, exchanges of ordinary shares for ADSs and ADSs for ordinary shares generally should not be subject to US federal income tax. The US Treasury has, however, expressed concerns that intermediaries in the chain of ownership between the US holder of an ADS and the issuer of the security underlying the ADS may, in some circumstances, be taking actions that are inconsistent with the beneficial ownership of the underlying security (for example, pre-releasing ADSs to persons that do not have the beneficial ownership of the securities underlying the ADSs). Accordingly, the availability of the reduced tax rate (as discussed below) for dividends received by certain non-corporate US holders, including US holders who are individuals, could be affected by future actions that may be taken by the US Treasury and/or intermediaries in the chain of ownership between the US holders of ADSs and us.

Table of Contents

Subject to the discussion below under the heading “Passive Foreign Investment Company Rules,” for US federal income tax purposes, distributions with respect to our ordinary shares or ADSs, other than distributions in liquidation and distributions in redemption of stock that are treated as exchanges, will be taxed to US holders as ordinary dividend income to the extent that the distributions do not exceed our current and accumulated earnings and profits as determined for federal income tax purposes. Distributions, if any, in excess of our current and accumulated earnings and profits will constitute a non-taxable return of capital and will be applied against and reduce the holder’s basis in our ordinary shares or ADSs. To the extent that these distributions exceed the US holder’s tax basis in our ordinary shares or ADSs, as applicable, the excess generally will be treated as capital gain. We do not, however, intend to calculate our earnings and profits under US federal income tax principles. Therefore, you should expect that any distribution from us generally will be treated for US federal income tax purposes as a dividend. Such dividends will not be eligible for the dividends received deduction generally allowed to a US corporation under Section 243 of the Code.

Individual US holders are eligible for reduced rates of US federal income tax (currently at a maximum rate of 20%) in respect of “qualified dividend income”. For this purpose, qualified dividend income generally includes dividends paid by non-US corporations if, among other things, certain minimum holding periods are met and either (i) the ordinary shares (or ADSs) with respect to which the dividend has been paid are readily tradable on an established securities market in the United States, or (ii) the non-US corporation is eligible for the benefits of a comprehensive US income tax treaty which provides for the exchange of information. For this purpose, ADSs listed on the NASDAQ exchange are considered to be readily tradable on an established securities market in the United States. Therefore, we currently believe that dividends paid with respect to our ADSs will constitute qualified dividend income for US federal income tax purposes, provided the individual US holders of our ADSs meet certain holding period requirements. However, since our ordinary shares are not listed on an established securities market in the United States and we are not eligible for the benefits of a comprehensive US income tax treaty which provides for the exchange of information, we do not believe that dividends that we pay on our ordinary shares that are not represented by ADSs currently meet the conditions required for these reduced tax rates. Furthermore, if we are a passive foreign investment company, as discussed below under the heading “Passive Foreign Investment Company Rules”, in the taxable year of the distribution or the preceding tax year, the dividends paid with respect to our ADSs will not constitute qualified dividend income. **US holders should consult their own tax advisors regarding the classification of any distributions from us as qualified dividend income.**

Dividends from us generally will constitute non-US-source income for foreign tax credit limitation purposes. The limitation on foreign taxes eligible for credit is calculated separately with respect to specific classes of income. For this purpose, dividends distributed by us generally will be treated as “passive category income” or, in the case of certain US holders, as “general category income.”

Sale or Other Disposition of Ordinary Shares or ADSs

Subject to the discussion below under “Passive Foreign Investment Company Rules,” if a US holder sells or otherwise disposes of its ordinary shares or ADSs in a taxable transaction, it will generally recognize gain or loss for US federal

income tax purposes in an amount equal to the difference between the amount realized on the sale or other taxable disposition and its tax basis in the ordinary shares or ADSs. Such gain or loss generally will be capital gain or loss and will be long-term capital gain or loss if the US holder has held the ordinary shares or ADSs for more than one year at the time of the sale or other taxable disposition. In general, any gain that US holders recognize on the sale or other taxable disposition of ordinary shares or ADSs will be US source income for purposes of the foreign tax credit limitation and any losses recognized will generally be allocated against US source income. Deduction of capital losses is subject to limitations under the Code.

Additional Medicare Tax

US holders that are individuals, estates or trusts and whose income exceeds certain thresholds generally will be subject to an additional 3.8% Medicare contribution tax on unearned income, including, among other things, cash dividends on, and capital gains from the sale or other taxable disposition of, our ordinary shares or ADSs, subject to certain limitations and exceptions. US holders should consult their own tax advisors regarding the effect, if any, of such tax on their ownership and disposition of our ordinary shares or ADSs.

Table of Contents

Passive Foreign Investment Company Rules

A special and adverse set of US federal income tax rules apply to a US holder that holds stock in a passive foreign investment company (PFIC). In general, we will be a PFIC if 75% or more of our gross income in a taxable year is passive income. Alternatively, we will be considered to be a PFIC if at least 50% of our assets in a taxable year, averaged over the year and determined based on fair market value, are held for the production of, or produce, passive income.

In determining whether a non-US corporation is a PFIC, a proportionate share of the income and assets of each corporation in which it owns, directly or indirectly, at least a 25% interest (by value) is taken into account.

We believe that we currently are not a PFIC and do not expect to become a PFIC in 2015. However, there is significant uncertainty in the application of the PFIC rules to mining enterprises such as ourselves as a result of the interplay of several sets of tax rules. In addition, because the tests for determining PFIC status are applied as of the end of each taxable year and are dependent upon a number of factors, some of which are beyond our control, including the value of our assets, the market price of our ordinary shares, and the amount and type of our gross income, there can be no assurance that we will not become a PFIC in the future or that the US Internal Revenue Service will agree with our conclusion that we are not a PFIC now.

If we are a PFIC for US federal income tax purposes for any year during a US holder's holding period of our ADSs or ordinary shares and the US holder does not make a "mark-to-market" election or a QEF election, both as described below:

- any gain recognized by a US holder upon the sale of ADSs or ordinary shares, or the receipt of some types of distributions, would be treated as ordinary income;
- this income generally would be allocated ratably over a US holder's holding period with respect to our ADSs or ordinary shares; and
- the amount allocated to prior years, with certain exceptions, will be subject to tax at the highest tax rate in effect for those years and an interest charge would be imposed on the amount of deferred tax on the income allocated to the prior taxable years.

We generally will be treated as a PFIC as to any US holder if we are a PFIC for any year during such holder's holding period. However, if we cease to satisfy the requirements for PFIC classification, a US holder may avoid PFIC classification for subsequent years if such holder elects to recognize gain based on the unrealized appreciation in the ADSs or ordinary shares through the close of the tax year in which we cease to be a PFIC. Additionally, if we are a PFIC, a US holder who acquires ADSs or ordinary shares from a decedent would be denied the normally available step-up in tax basis for our ADSs or ordinary shares to fair market value at the date of death and instead would have a tax basis equal to the lower of the fair market value or the decedent's tax basis.

A US holder who beneficially owns stock in a PFIC may be required to file an annual information return on Internal Revenue Service Form 8621 (Information Return by a Shareholder of a Passive Foreign Investment Company or Qualified Electing Fund). The US Treasury and IRS continue to issue new guidance regarding these information reporting requirements. **US holders should consult their own tax advisors regarding the application of the information reporting rules to our ADSs or ordinary shares and how they may apply to their particular circumstances.**

A US holder generally may be able to avoid the imposition of the special tax and interest charge described above by electing to mark its ADSs or ordinary shares to market annually, and, therefore, recognize for each taxable year, subject to certain limitations, ordinary income or loss equal to the difference, as of the close of taxable year, between the fair market value of its ADSs or ordinary shares and the adjusted tax basis of his or its ADSs or ordinary shares. Losses would be allowed only to the extent of the net mark-to-market gain previously included by the US holder under the election in prior taxable years. If a mark-to-market election with respect to ADSs or ordinary shares is in effect on the date of a US holder's death, the tax basis of the ADSs or ordinary shares in the hands of a US holder who acquired them from a decedent will be the lesser of the decedent's tax basis or the fair market value of the ADSs or ordinary shares. A mark-to-market election is available only if the ADSs or ordinary shares, as the case may be, are considered "marketable stock." Generally, stock will be considered marketable stock if it is "regularly traded" on a "qualified exchange" within the meaning of applicable US Treasury Regulations. A class of stock is regularly traded during any calendar year during which such class of stock is traded, other than in de minimis quantities, on at least 15 days during each calendar quarter. The NASDAQ constitutes a qualified exchange, and a non-US securities exchange constitutes a qualified exchange if it is regulated or supervised by a governmental authority of the country in which the securities exchange is located and meets certain trading, listing, financial disclosure and other requirements set forth in US Treasury Regulations.

Table of Contents

Because a mark-to-market election cannot be made for equity interests in any lower-tier PFICs owned by us, a US holder may continue to be subject to the PFIC rules described above with respect to its indirect interest in any investments held by us that are treated as an equity interest in a PFIC for US federal income tax purposes. US holders should consult their tax advisors as to the availability and desirability of a mark-to-market election, as well as the impact of such election on interests in any lower-tier PFICs.

In certain circumstances a holder of stock or ADSs in a PFIC may avoid taxation under the rules described above by making a “qualified electing fund” (QEF), election to include in income its share of a PFIC’s annual income on a current basis. However, a QEF election is only available if the PFIC annually provides its stockholders with certain tax information, and we currently do not intend to prepare or provide such information. Accordingly, you should assume that a QEF election is unavailable.

Rules relating to a PFIC are very complex. US holders are encouraged to consult their own tax advisors regarding the application of the PFIC rules to their investments in our ADSs or our ordinary shares.

Backup Withholding and Information Reporting

Payments to US holders in respect of our ordinary shares or ADSs may be subject to information reporting to the US Internal Revenue Service and to backup withholding tax at a rate of 28%.

However, backup withholding and information reporting will not apply to a US holder that is a corporation or comes within an exempt category, and demonstrates the fact when so required, or furnishes a correct taxpayer identification number and makes any other required certification. US holders who are required to establish their exempt status generally must provide such certification on Internal Revenue Service Form W-9.

Backup withholding is not an additional tax. Amounts withheld under the backup withholding rules will be allowed as a refund or credit against a US holder’s US federal income tax liability, provided that the required procedures are followed.

In addition, US holders should be aware of annual reporting requirements on Internal Revenue Service Form 8938 (Statement of Specified Foreign Financial Assets) with respect to the holding of certain foreign financial assets, including our ordinary shares and ADSs that are not held in an account maintained by certain types of financial institutions, if the aggregate value of all of such assets exceeds \$50,000 (or \$100,000 for married couples filing a joint return).

US holders should consult their own tax advisors regarding the application of the information reporting and backup withholding rules to our ordinary shares and ADSs, and the application of the annual reporting requirements to your particular situation.

Material United Kingdom Tax Considerations

The following statements do not constitute tax advice and are intended as a general guide only to the U.K. tax position under current U.K. tax legislation, and published HM Revenue & Customs (HMRC) practice as at the date of this document, both of which are subject to change at any time, possibly with retrospective effect. These statements deal only with the position of shareholders who are resident (and in the case of individuals only) domiciled solely in the U.K. for tax purposes (except where the position of a non-U.K. tax resident shareholder is expressly referred to), who hold their ordinary shares or ADSs as an investment and who are the absolute beneficial owners of the ordinary shares or ADSs and of all dividends of any kind paid in respect of them in circumstances where the dividends paid are regarded for U.K. tax purposes as that person's own income (and not the income of some other person). The tax position of certain categories of shareholders who are subject to special rules (such as persons acquiring their shares or ADSs (or deemed to acquire their shares or ADSs) in connection with an employment or office, dealers in securities, insurance companies and collective investment schemes and shareholders owning 10% or more of the ordinary shares or voting power, rights to profit or capital of the company) is not considered. Any shareholder who is in doubt as to their tax position regarding the acquisition, ownership or disposal of their ordinary shares or ADSs, or who are subject to tax in a jurisdiction other than the U.K., should consult their own independent tax adviser.

Table of Contents

Dividends

A person having an interest in ADSs or ordinary shares who is not a resident in the U.K. will not be subject to tax in the U.K. on dividends paid on ordinary shares or ADSs, unless that person carries on a trade, profession or vocation in the U.K. (and, if that person is a company, does so through a permanent establishment) to which the ordinary shares or ADSs in question are attributable.

A person having an interest in ADSs or ordinary shares who is resident in the U.K. and is not a body corporate will, in general, be subject to U.K. income tax on dividends paid by us.

A U.K. resident body corporate holding an interest in ADSs or ordinary shares should not generally be taxable on dividends paid by us unless they are a small company.

A U.K. resident individual shareholder will be entitled to a tax credit, which may be set off against the shareholder's total income tax liability on the dividend. The value of the tax credit is currently 10% of the aggregate of the dividend and the tax credit (the "Gross Dividend"), which is also equal to one-ninth of the cash dividend received.

Such an individual U.K. resident shareholder who is liable to income tax at the basic rate will be subject to tax on the dividend at the rate of 10% of the Gross Dividend, so that any tax credit will satisfy in full such shareholder's liability to income tax on the dividend.

An individual shareholder who is liable to income tax at the higher tax rate will be taxed at the rate of 32.5% on the Gross Dividend. Any tax credit will be set against, but not fully match, the shareholder's tax liability on the Gross Dividend and such shareholder will have to account for additional income tax equal to 22.5% of the Gross Dividend (which is equal to 25% of the cash dividend received) to the extent that the Gross Dividend falls within the 40% tax band.

For taxable income above £150,000 an additional higher rate of tax was introduced from 6 April 2010, and which from 6 April 2013 is at a rate of 45%. Dividends that fall into the 45% tax bracket will be liable to income tax at a rate of 37.5% of the Gross Dividend. Any tax credit will be set against, but not fully match, the shareholder's tax liability on the Gross Dividend and such shareholder will have to account for additional income tax equal to 27.5% of the Gross Dividend (this equates to 30.56% of the cash dividend received) to the extent that the Gross Dividend, when treated as the top slice of the shareholder's income, falls above the threshold for the 45% rate of tax.

An individual shareholder will not generally be able to claim repayment from HMRC of any part of the tax credit attaching to dividends paid by us.

Each shareholder resident outside the U.K. may also be subject to foreign taxation on dividend income under the local law of the country(ies) in which they reside/are resident.

Capital Gains

A person having an interest in ADSs or ordinary shares who is not resident in the U.K. will generally not be subject to tax in the U.K. on gains arising on a disposal of our ordinary shares or interests in the ADSs.

Individuals who left the UK after being UK resident who were resident in the U.K. for at least four out of seven tax years prior to departure, and whose temporary period of non-residence is 5 years or less, will be subject to UK capital gains tax in the year of return on any gains realized on the disposal during the period of absence of any assets which were owned before taking up residence abroad.

Persons having an interest in ADSs or ordinary shares who are resident in the U.K. or who hold their ordinary shares or interests in ADSs through a U.K. trading branch or agency (or, if that person is a company, a permanent establishment) will, in general, be subject to U.K. taxation on gains arising on a disposal of ordinary shares or interests in ADSs.

Table of Contents

The first £11,100 of an individual's net chargeable gains are exempt for the tax year commencing April 6, 2015. The balance is taxed at 18% for gains that fall within the individual's otherwise unused basic rate income tax band (currently £31,866 and falling to £31,786 from April 6, 2015) and 28% thereafter.

A body corporate will generally be subject to U.K. corporation tax on chargeable gains at the standard rate of U.K. corporation tax (which will be reduced from 21% to 20% from April 1, 2015).

Inheritance Tax

Liability to U.K. inheritance tax may arise on the death of an individual having an interest in ADSs or ordinary shares, or on a gift (or disposal at an undervalue) of ordinary shares or ADSs by an individual who is domiciled, or deemed to be domiciled, in the U.K.

U.K. inheritance tax may still be relevant for individuals who are neither domiciled nor deemed to be domiciled in the U.K. in respect of U.K. property. U.K. property is generally liable to U.K. inheritance tax subject to Double Tax Treaty provisions. This is a complicated area and individuals should consult their own independent tax adviser.

Stamp Duty and Stamp Duty Reserve Tax

No U.K. stamp duty or stamp duty reserve tax (SDRT) should be payable on the issue of the ordinary shares or ADSs, or on the delivery of the ADSs into a Depository Trust Company (DTC).

No U.K. stamp duty should in practice be payable on the transfer of ordinary shares or ADSs provided any instrument of transfer is executed and retained outside of the U.K. and no matters or actions relating to the transfer are performed in the U.K., and no U.K. stamp duty should arise in respect of any dealings in the ordinary shares or ADSs within a clearance service, where such dealings are effected in book entry form in accordance with the procedures of the clearance service and not by written instrument.

SDRT should not be payable on an unconditional agreement to transfer ADSs. Nor should SDRT be payable on any unconditional agreement to transfer ordinary shares, provided there is no register in the U.K. in respect of the ordinary shares and provided the ordinary shares are not paired with any shares issued by any company incorporated in the U.K.

It should be noted that certain categories of person (for example, market makers and broker dealers) may not be liable to stamp duty or SDRT and others may be liable at a higher rate (for example, persons connected with depository arrangements and clearance services) or may, although not primarily liable for the tax, be required to notify and account for it under the SDRT Regulations 1986.

A. Welsh, Telephone: 011 44 1534-735-333. A copy of each report submitted in accordance with applicable United States law is available for public review at our principal executive offices at 3rd Floor, Unity Chambers, 28 Halkett Street, St. Helier, Jersey, Channel Islands.

A copy of each document (or a translation thereof to the extent not in English) concerning us that is referred to in this Annual Report, is available for public view at our principal executive offices at 3rd Floor Unity Chambers, 28 Halkett Street, St. Helier, Jersey, Channel Islands, Attention: M.A. Welsh, Telephone: 011 44 1534-735-333.

I. SUBSIDIARY INFORMATION

Not applicable.

Table of Contents**Item 11. Quantitative and Qualitative Disclosures About Market Risk****Hedge Policy**

Although, in general, it is not our policy to hedge our gold sales, we believe it is prudent to hedge during times of significant capital expansion and debt and we are sometimes required to do so under debt financing arrangements. The market price of gold has a significant effect on our results of operations, our ability to pay dividends and undertake capital expenditure, and the market price of our ordinary shares. Gold prices have historically fluctuated widely and are affected by numerous industry factors over which we have no control. The aggregate effect of these factors is impossible for us to predict.

We have previously used, and may in the future use, hedging instruments to protect the selling price of some of our anticipated gold production. These hedging instruments were required by the terms of our previous loan agreements. The last remaining gold price forward sales contracts were delivered into during 2010.

Foreign Currency and Commodity Price Sensitivity

In the normal course of business, the group enters into transactions denominated in foreign currencies (primarily Euro, South African Rand, Congolese franc and CFA). As a result, the group is subject to exposure from fluctuations in foreign currency exchange rates. In general, the group does not enter into derivatives to manage these currency risks. Generally, the group does not hedge its exposure to gold price fluctuation risk and sells at market spot prices. Gold sales are disclosed in US dollars and do not expose the group to any currency fluctuation risk. However, during periods of capital expenditure or loan finance, the company may use forward contracts or options to reduce the exposure to price movements, while maintaining significant exposure to spot prices. These derivatives may establish a fixed price for a portion of future production while the group maintains the ability to benefit from increases in the spot gold price for the majority of future gold production. The group is also exposed to fluctuations in the price of consumables, such as fuel, steel, rubber, cyanide and lime, mainly due to changes in the price of oil, as well as fluctuations in exchange rates. No hedging instruments existed during 2014.

	2014	2013
\$000

• Euro (EUR)	(9,845)	(30,688)
• South African rand (ZAR)	(1,720)	(8,228)
• British pound (GBP)	(636)	(1,006)

The group's exposure to foreign currency arises where a company holds monetary assets and liabilities denominated in a currency different to the functional currency of the holder of the instrument which is the US dollar. Set out below is the impact of a 10% change in the US dollar on profit and equity arising as a result of the revaluation of the group's foreign currency financial instruments.

	Closing exchange Rate	Effect of 10.0% strengthening of US dollar on net earnings and equity
Level of exposure of foreign currency risk (continued)		
At December 31, 2014		
• Euro (EUR)	0.8226	(855)
• Communauté Financière Africaine franc (CFA)	539.63	10,321
• South African rand (ZAR)	11.60	72
• British pound (GBP)	0.64	(18)
At December 31, 2013		
• Euro (EUR)	0.7264	1,036
• Communauté Financière Africaine franc (CFA)	467.64	3,485
• South African rand (ZAR)	10.50	331
	0.61	99

The sensitivities are based on financial assets and liabilities held at December 31 where balances were not denominated in the functional currency of the holder of the instrument. The sensitivities do not take into account the group's sales and costs and the results of the sensitivities could change due to other factors such as changes in the value of financial assets and liabilities as a result of non-foreign exchange influenced factors.

The market price of gold has a significant effect on our results of operations, our ability to pay dividends and undertake capital expenditure and the market prices of our ordinary shares. Gold prices have historically fluctuated widely and are affected by numerous industry factors over which we have no control. The aggregate effect of these factors is not possible for us to predict.

The group is fully exposed to the spot gold price on gold sales.

Interest Rate Sensitivity

We generally do not undertake any specific actions to cover our exposure to interest rate risk and at December 31, 2014 were not party to any interest rate risk management transactions.

At December 31, 2012 the fair value of our borrowings, including the short-term portion of these liabilities, excluding loans from outside shareholders in subsidiaries, was estimated at nil. The aggregate hypothetical

- 127 -

loss in earnings on an annual basis from a hypothetical increase of 10% of the three month LIBOR rate was not applicable.

At December 31, 2013 the fair value of our borrowings, including the short-term portion of these liabilities, excluding loans from outside shareholders in subsidiaries, was estimated at \$0. The aggregate hypothetical loss in earnings on an annual basis from a hypothetical increase of 10% of the three month LIBOR rate was not applicable.

At December 31, 2014 the fair value of our borrowings, including the short-term portion of these liabilities, excluding loans from outside shareholders in subsidiaries, was estimated at \$0. The aggregate hypothetical loss in earnings on an annual basis from a hypothetical increase of 10% of the three month LIBOR rate was not applicable.

Concentration of credit risk

The group's cash balances do not give rise to a concentration of credit risk because it deals with a variety of major financial institutions. Its receivables and loans are regularly monitored and assessed. Receivables are impaired when it is probable that amounts outstanding are not recoverable as set out in the accounting policy note for receivables. Gold bullion, the group's principal product, is produced in Mali and Côte d'Ivoire (and in the case of its joint ventures in DRC and Mali). The gold produced is sold to the largest accredited gold refinery in the world. Credit risk is further managed by regularly reviewing the financial statements of the refinery. The group is further not exposed to significant credit risk on gold sales, as cash is received within a few days of the sale taking place. While not financial assets for IFRS 7, included in receivables is \$106.8 million (2013: \$125.7 million; 2012: \$87.5 million) (refer to note 7) relating to indirect taxes owing to Loulo, Gounkoto and Tongon by the State of Mali, which are denominated in CFA, which holds some credit risk for the group. The legally binding mining conventions in Mali permit offsetting of other corporate taxes against approved unpaid TVA. A further \$50.5 million (2013: \$36.4 million; 2012: \$21.2 million) is held within the underlying statement of financial position of the equity accounted Kibali joint venture which is considered recoverable given the receipts obtained during the year and absence of significant disputed items, albeit receipts, remain slow. See "Risk Factors."

D. AMERICAN DEPOSITARY SHARES

Fees Payable by ADS Holders

Our American Depositary Shares, or ADSs, each representing the right to receive one of our ordinary shares, are listed on the NASDAQ Global Select Market under the symbol "GOLD." A copy of our Form of Amended and Restated Deposit Agreement with The Bank of New York Mellon (Depositary) was filed with the SEC as an exhibit to our Form F-6 filed on October 7, 2009 (Deposit Agreement). Pursuant to the Deposit Agreement, holders of our ADSs may have to pay to the Depositary, either directly or indirectly, fees or charges up to the amounts set forth in the table below:

Associated Fee	Depositary Action
\$5.00 or less per 100 ADSs (or portion thereof).	Execution and delivery of ADRs and the surrender of ADRs pursuant to the Deposit Agreement.

Table of Contents

Associated Fee	Depository Action
<p>\$0.02 or less per ADS (or portion thereof).</p>	<p>Any cash distribution made pursuant to the Deposit Agreement, including, among other things:</p> <ul style="list-style-type: none"> •cash distributions or dividends, •distributions other than cash, shares or rights, •distributions in shares, and •rights of any other nature, including rights to subscribe for additional shares.
<p>Taxes and other governmental charges.</p>	<p>As applicable.</p>
<p>Registration fees in effect for the registration of transfers of shares generally on the share register of the Company or foreign registrar and applicable to transfers of shares to or from the name of the Depository or its nominee or the custodian or its nominee on the making of deposits or withdrawals.</p>	<p>As applicable.</p>
<p>A fee equal to the fee for the execution and delivery of ADSs which would have been charged as a result of the deposit of such securities.</p>	<p>Distributions of securities other than cash, shares or rights.</p>
<p>Any other charges payable by the Depository, any of its agents (and their agents), including the custodian (by billing such owners for such charge or by deducting such charge from one or more cash dividends or other cash distributions).</p>	<p>Servicing of shares or other deposited securities.</p>
<p>Expenses incurred by the Depository.</p>	<p>•Cable, telex and facsimile transmission (where expressly provided for in the Deposit Agreement)</p> <p>•Foreign currency conversion into U.S. dollars</p>

At our 2014 annual general meeting, our shareholders approved a resolution authorizing the directors to offer shareholders the opportunity to receive new ordinary shares or, for ADS holders, new ADSs, instead of cash in respect of the final dividend and any future dividend to be declared or paid in the period up to and including the 2019 annual general meeting (scrip dividend). For ADS holders electing to participate in the scrip dividend scheme, an issuance fee of \$0.04 per ADS payable to the Depository will be deducted from the cash dividend amount an ADS holder is entitled to.

Depository Payments for 2014

For the year ended December 31, 2014, our Depository made no payments on our behalf in relation to our ADR program.

In July 2011, we entered into letter agreement with the Depository providing for the Depository's payment to us of certain fees, including a fee of \$900,000 per year for five years, subject to the satisfaction of specified conditions.

Table of Contents

PART II

Item 13. Defaults, Dividend Arrearages and Delinquencies

There have been no material defaults in the payment of principal, interest, a sinking fund or purchase fund installment or any other material default with respect to any of our indebtedness.

Item 14. Material Modification to the Rights of Security Holders and Use of Proceeds

Effective on June 11, 2004, we undertook a subdivision of our ordinary shares, which increased our issued share capital from 29,273,685 to 58,547,370 ordinary shares. In connection with this “share split”, our ordinary shareholders of record on June 11, 2004 received two additional \$0.05 ordinary shares for every one \$0.10 ordinary share they held. Following the share split, each shareholder held the same percentage interest in us, however, the trading price of each share was adjusted to reflect the share split. ADS holders were affected the same way as shareholders and the ADS ratio remains one ADS to one ordinary share.

Item 15. Controls and Procedures

(a) Disclosure Controls and Procedures: As of December 31, 2014 (the “Evaluation Date”), the company, under the supervision and with the participation of its management, including the Chief Executive Officer and Chief Financial Officer, has carried out an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures. Based on such evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that, as of the evaluation date, the company’s disclosure controls and procedures, including controls and procedures that are designed to ensure that information required to be disclosed by us in the reports that we file or submit under the Securities Exchange Act of 1934, is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, or persons performing similar functions, as appropriate to allow timely decisions regarding required disclosure, are effective to ensure that information required to be disclosed by us in reports that we file or submit under the Securities Exchange Act of 1934 are recorded, processed, summarized and reported within the required time periods.

(b) Management’s Report on Internal Control over Financial Reporting: Management is responsible for establishing and maintaining adequate internal control over financial reporting. The Securities Exchange Act of 1934 defines internal control over financial reporting in Rule 13a-15(f) and 15d-15(f) as a process designed by, or under the supervision of, the company’s principal executive and principal financial officers and effected by the company’s board

of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

- Pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the company;

- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and

- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the consolidated financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Our management assessed the effectiveness of the company's internal control over financial reporting as of December 31, 2014. In making this assessment, our management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in Internal Control – Integrated Framework (2013).

Based on this assessment management concluded that, as of the evaluation date, the company's internal control over financial reporting is effective based upon those criteria.

(c) Changes in Internal Control Over Financial Reporting: There have been no changes in the company's internal control over financial reporting identified in connection with the evaluation that occurred during the year ended December 31, 2014 that have materially affected, or are reasonably likely to materially affect the company's internal control over financial reporting.

(d) Attestation Report of the Registered Public Accounting Firm: The company's independent registered accounting firm, BDO LLP, has issued an audit report on the effectiveness of the company's internal control over financial reporting. See report of BDO LLP, an Independent Registered Public Accounting Firm on page 131.

Table of Contents

Board of Directors and Shareholders

Randgold Resources Limited

We have audited Randgold Resources Limited's internal control over financial reporting as of December 31, 2014, based on criteria established in *Internal Control – Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). Randgold Resources Limited's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying report included in "Item 15B, "Management's Report on Internal Control Over Financial Reporting". Our responsibility is to express an opinion on the company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Randgold Resources Limited maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated statements of financial position of Randgold Resources Limited as of December 31, 2014 and 2013 and the related consolidated statements of comprehensive income, consolidated statements of changes in equity and statements of consolidated cash flows for the three years in the period ended December 31, 2014 and our report dated 30 March 2015, expressed an unqualified opinion thereon.

/s/ BDO LLP
BDO LLP

BDO LLP is a limited liability partnership registered in England and Wales (with registered number OC305127).

Table of Contents

Item 16. Reserved

Item 16A. Audit Committee Financial Expert

Membership of the company's audit committee, including its chairman, comprises only independent non-executive directors, in compliance with the Sarbanes-Oxley Act of 2002. The company's board determined that Dr. K. Voltaire, the current chairman of the audit committee, was an "audit committee financial expert" as defined in Item 16A of Form 20-F. Dr. Voltaire and each of the other members of the audit committee (being Mr. A.J. Quinn, Mrs. J.L. Mabunda and Mr. J. Kassum) are independent non-executive directors. All four members of the committee have considerable financial knowledge and experience to assist in overseeing and guiding the board and the company in respect of audit and corporate governance disciplines.

The committee is guided by its terms of reference, the mandate as delegated by the board is ensuring the integrity of financial reporting and adequacy of governance, internal control and risk management policies and procedures throughout the company and its operations.

Item 16B. Code of Ethics

In order to comply with the company's obligations in terms of the Sarbanes-Oxley Act of 2002 and in the interests of good governance, the company has systems and procedures to introduce, monitor and enforce its ethical codes and the board has adopted a code of ethics that applies to all employees and a code of ethics for the Chief Executive Officer, Chief Financial Officer and all financial officers. The codes of ethics, entitled the "Code of Conduct" can be found on the company's website, www.randgoldresources.com.

In addition, the company has adopted a whistle-blowing policy that encourages employees and other stakeholders to confidentially and anonymously report acts of an unethical or illegal nature that affect the company's interests. The whistle-blowing policy applies to all companies and operations in the group and provides a channel for individuals to confidentially raise any concerns about business practices or acts that are in conflict with the company's business principles, unlawful, or financial malpractice in the company and its managed operations. The program, which is monitored by the audit committee, makes available a selection of telephonic, email and mail communication channels as a medium for reporting. Reports are received by the general counsel and secretary and are referred to the internal audit function or an appropriate manager for investigation and resolution. A report is provided to the audit committee on a quarterly basis. The process encourages reports to be made in good faith in a responsible and ethical manner. Employees are encouraged to first seek resolution of alleged malpractices through discussion with their direct managers, if appropriate, or, if unresolved, they should report these through the whistle-blowing line or directly to internal audit.

Item 16C. Principal Accountant Fees and Services

BDO LLP has served as our independent registered public accounting firm for the financial years ended December 31, 2014, 2013 and 2012.

The following table presents the aggregate fees for professional services and other services rendered by our Independent Registered Public Accounting Firm to us in 2014 and 2013.

- 132 -

Table of Contents

	2014\$	2013\$
	(\$'000)	(\$'000)
Audit Fees (1)	1,123	1,100
Audit-related Fees (2)	—	16
Total	1,123	1,116

- (1) The Audit Fees consist of fees billed for the annual audit services engagement and other audit services, which are those services that only the external auditor reasonably can provide, and include our audit and statutory audits.
- (2) Audit-related fees include fees billed relating to comfort letters and consents; attest services; and assistance with and review of documents filed with the Securities and Exchange Commission and UK Listing Authority.

No other fees were billed.

Audit Committee Pre-Approval Policies and Procedures

Below is a summary of the Audit Committee's pre-approved policies and procedures:

The Audit Committee comprises only independent non-executive directors and its mandate covers the sphere of duties relating to accounting policies, internal control, financial reporting practices, identification of exposure to significant risks and all corporate governance issues.

The Audit Committee is responsible for the appointment, removal and oversight of the activities of the external auditors. In addition, the Audit Committee sets the principles for recommending the use of external auditors for non-audit services. Consistent with the audit committee's policy during 2014 no non-audit services were provided by our external auditors. On January 30, 2014 and again on November 2, 2014 the audit committee reaffirmed that policy.

The Audit Committee met six times during 2014. At some of these meetings the committee met with the external audit partner and the finance director, to review the audit plans of the external auditors and to ascertain the extent to which the scope of the audit can be relied upon to detect weaknesses in internal controls. The audit committee met with the finance director to review the quarterly and half-yearly financial results, and met with the finance director and external auditor to review the preliminary announcement of the annual results and the annual financial statements, as well as all statutory submissions of a financial nature, prior to approval by the board.

During 2014, all Audit-related Fees provided to us by BDO LLP were approved by the Audit Committee pursuant to the de minimis exception to the pre-approval requirement provided by paragraph (c)(7)(i)(C) of Rule 2-01 of Regulation S-X.

No work was performed by persons other than BDO LLP's full-time, permanent employees on the BDO LLP's engagement to audit our financial statements for 2014 and 2013, except that BDO LLP utilizes members of staff in its South African, Jersey, United States, Zambian and Mauritian offices member firms as part of the engagement team.

During 2014, the Audit Committee has overseen work undertaken to ensure compliance with the requirements of Section 404 of the Sarbanes Oxley Act of 2002.

Item 16D. Exemptions from the Listing Standards for Audit Committees

Item 16E. Purchase of Equity Securities by the Issuer and Affiliated Purchasers

Neither the issuer nor any affiliate of the issuer purchased any of our shares during 2014.

Table of Contents

Item 16F. Change in Registrant's Certifying Accountant

Not Applicable.

Item 16G. Corporate Governance

We are subject to a variety of corporate governance guidelines and requirements of NASDAQ, the London Stock Exchange and the SEC. We believe that we comply with the applicable corporate governance requirements. Although we are listed on the NASDAQ Global Select Market, we are not required to comply with all of NASDAQ's corporate governance rules which are applicable to US companies. The significant ways in which the NASDAQ corporate governance rules differ for us, as a foreign company, are a reduced quorum requirement for shareholder meetings. Since 2011, we have been required to comply with the provisions of the United Kingdom Corporate Governance Code which was issued in the United Kingdom in June 2008 and was subsequently revised in 2010 and again last year. The 2012 edition of the United Kingdom Governance Code was fully implemented in 2013. According to the provisions of the United Kingdom Corporate Governance Code we were in compliance with the provisions throughout the year. In compliance with the United Kingdom Corporate Governance Code (2012 edition), all directors are subject to re-election on an annual basis and at our AGM on May 6, 2014 all of our directors (other than Mr. Liétard who resigned from the board and Safiatou Ba-N'daw who was appointed March 1, 2015) were re-elected.

REPORT OF THE INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Board of Directors and Shareholders

Randgold Resources Limited

We have audited the accompanying consolidated statements of financial position of Randgold Resources Limited as of December 31, 2014 and 2013 and the related consolidated statements of comprehensive income, consolidated statements of changes in equity and statements of consolidated cash flows for the three years in the period ended December 31, 2014. In connection with our audits of the financial statements, we have also audited the financial statement schedule, included on page S-1 of this Form 20-F. These financial statements and schedule are the responsibility of Company's management. Our responsibility is to express an opinion on these financial statements and schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements and the schedule are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinions.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Randgold Resources Limited at December 31, 2014 and 2013 and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2014, in conformity with International Financial Reporting Standards as issued by the International Accounting Standards Board (IASB).

Also, in our opinion, the financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, present fairly, in all material respects, the information set forth therein.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Randgold Resources Limited's internal control over financial reporting as of December 31, 2014, based on criteria established in *Internal Control – Integrated Framework* (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) and our report dated March 30, 2015, expressed an unqualified opinion thereon.

F-4

¹ *Share of other comprehensive expense or joint ventures and the fair value movement on available for-sale assets may be recycled through the income statement in the future if certain future conditions arise.*

² *Restricted shares and Co-Investment Plan (CIP) awards were issued as remuneration to executive directors, non-executive directors and senior management. Shares were also issued to executive directors following approval of their 2014, 2013 and 2012 annual bonuses. The transfer between 'other reserves' and 'share premium' in respect of the shares vested represents the cost calculated in accordance with IFRS 2.*

Share capital

The share capital comprises the issued ordinary shares of the company at par.

Share premium

The share premium comprises the excess value recognized from the issue of ordinary shares at par and amounts transferred from other reserves on the exercise of share options and vesting of share awards.

Retained earnings

Retained earnings comprise the group's cumulative accounting profits and losses since inception.

Other reserves

Other reserves comprise the cumulative charge recognized under IFRS 2 in respect of share-based payment awards (net of amounts transferred to share capital and share premium), as well as cumulative fair value movements in available-for-sale financial assets.

At December 31, 2014, the balance of the share-based payment reserve amounted to \$68.4 million (December 31, 2013: \$65.1 million; December 31, 2012: \$50.1 million). The foreign currency translation reserve was \$1.4 million at December 31, 2014 (December 31, 2013: \$1.4 million; December 31, 2012: \$1.4 million) and the cumulative net losses in available-for-sale financial assets amounted to \$2.5 million at December 31, 2014 (December 31, 2013: cumulative net loss of \$2.1 million; December 31, 2012: cumulative net loss of \$0.5 million). Refer to note 12 for

further details of available-for-sale financial assets.

Non-controlling interests

Non-controlling interests comprise the non-controlling interests' share of cumulative profits and losses in the group, less their share of dividends paid.

Net increase/(decrease) in cash and equivalents	44,601	(335,717)	(89,352)
Cash and equivalents at beginning of year	38,151	373,868	463,220
Cash and cash equivalents at end of year	82,752	38,151	373,868

The effective interest rate on cash and cash equivalents was 0.05% (2013: 0.54%; 2012: 0.41%). These funds have an average maturity of less than 90 days.

F-6

Notes to the consolidated financial statements

for the year ending December 31, 2014

1. Nature of operations

The company and its subsidiaries together with its joint ventures (the group) carry out exploration and gold mining activities. Currently there are three operating mines in Mali, West Africa: the Morila gold mine (equity accounted joint venture), which started production in October 2000, the Loulo gold mine complex (subsidiary), which commenced production in November 2005 and the Goukoto gold mine (subsidiary), which began production in June 2011. The group also operates a fourth mine in Côte d'Ivoire, the Tongon gold mine (subsidiary), which started production in December 2010. The group also holds an effective 45% interest in the Kibali gold mine (equity accounted joint venture) in the Democratic Republic of Congo (DRC) in conjunction with AngloGold Ashanti Limited (AngloGold Ashanti) (45%) and Société Minière de Kilo-Moto sarl (SOKIMO) (10%). Randgold is the operator of the Morila, Loulo, Goukoto, Tongon and Kibali mines.

The interests of the group in its operating mines are held through Société des Mines de Morila SA (Morila) which owns the Morila mine, Société des Mines de Loulo SA (Loulo) which owns the Loulo mine, Société des Mines de Tongon SA (Tongon) which owns the Tongon mine, Société des Mines de Goukoto SA (Goukoto) which owns the Goukoto mine and Kibali Goldmines SA (Kibali), which owns the Kibali mine. Randgold holds an effective 40% interest in Morila in conjunction with AngloGold Ashanti (40%) and the State of Mali (20%). Management of Morila Limited, the 80% shareholder of Morila, is effected through a joint venture committee, with Randgold and AngloGold Ashanti each appointing one-half of the members of the committee. Similarly, management of Kibali (Jersey) Limited, the effective 90% shareholder of Kibali, is effected through a joint venture committee, with Randgold and AngloGold Ashanti each appointing one-half of the members of the committee. Randgold holds an effective 80% interest in Loulo and Goukoto. The remaining 20% interest is held by the State of Mali. Randgold holds an effective 89% interest in Tongon, 10% is held by the State of Côte d'Ivoire while the remaining 1% is held by a local Ivorian company.

The group has a portfolio of exploration permits and projects, with various exploration programs, ranging from early to substantial stage, underway in the DRC, Mali, Senegal and Côte d'Ivoire.

2. Significant accounting policies

The principal accounting policies applied in the preparation of these consolidated financial statements are set out below. These policies have been consistently applied to all the years presented, unless otherwise stated.

Basis of preparation

The consolidated financial statements of Randgold Resources Limited and its subsidiaries and joint ventures have been prepared in accordance with International Financial Reporting Standards and Interpretations (collectively (IFRS)) issued by the International Accounting Standards Board (IASB) and in accordance with Article 105 of the Companies (Jersey) Law of 1991. The consolidated financial statements have been prepared under the historical cost convention, as modified by the revaluation of available-for-sale financial assets, and various financial assets. The preparation of financial statements in conformity with IFRS requires the use of certain critical accounting estimates. It also requires management to exercise its judgment in the process of applying the company's accounting policies. The areas involving a high degree of judgment or complexity, or areas where assumptions and estimates are significant to the consolidated financial statements are disclosed in note 3.

After reviewing the company's budget for the next financial year, and other longer term plans, the directors are satisfied, at the time of approving the financial statements, it is appropriate to adopt the going concern basis in preparing the financial statements. The directors have no reason to believe that the company will not be a going concern in the foreseeable future based on forecasts and available cash resources and available facilities.

New standards and interpretations applied

The IASB has issued the following new standards, amendments to published standards and interpretations to existing standards with effective dates on or prior to January 1, 2014 which have been adopted by the group for the first time this year.

		IFRS as issued by IASB	
		Effective period commencing on or after	Impact on group
IAS 32	Amendment – offsetting financial assets and financial liabilities	Jan 1, 2014	No material impact
IAS 36	Amendment – recoverable amounts disclosures for non-financial assets	Jan 1, 2014	No material impact
IFRIC 21	Levies	Jan 1, 2014	No material impact

Standards effective in future period

Certain new standards, amendments and interpretations to existing standards have been published that are relevant to the group's activities and are mandatory for the group's accounting periods beginning after January 1, 2015 or later periods and which the group has decided not to adopt early.

		Effective period commencing on or after
	Annual improvements to IFRSs 2010-2012 cycle	July 1, 2014
	Annual improvements to IFRSs 2011 - 2013 cycle	July 1, 2014
IFRS 9	Financial instruments	Jan 1, 2018
IAS 19	Amendment – Defined benefit plans: employee contributions	Jul 1, 2014
IFRS 11	Amendment – Accounting for acquisition of interests in joint operations	Jan 1, 2016
IAS 16 & IAS 38	Amendments – Clarification of acceptable methods of depreciation and amortization	Jan 1, 2016
IFRS 15	Revenue from contracts with customers	Jan 1, 2017
IAS 27	Amendment – Equity method in separate financial statements	Jan 1, 2016
IFRS 10 & IAS 28	Amendment – Sale or contribution of assets between an investor and its associate or joint venture	Jan 1, 2016
IAS 1	Amendment – Disclosure initiative	Jan 1, 2016
	Annual improvements to IFRSs (2012-2014 cycle)	Jan 1, 2016

The group is currently assessing the impact of these standards on the financial statements. At present, no impact is anticipated in respect of the standards and interpretations, given the nature of operations.

Consolidation

The consolidated financial information includes the financial statements of the company, its subsidiaries and the company's equity accounted joint ventures using uniform accounting policies for like transactions and other events in similar circumstances.

Subsidiaries

Subsidiaries are entities over which the group has the power to govern the financial and operating policies so as to obtain benefits from the activities and the ability to use its power over the investee to affect the amounts of the group's returns and which generally accompanies an interest of more than one-half of the voting rights. Subsidiaries are fully consolidated from the date on which control is transferred to the group. They are deconsolidated from the date that control ceases. The purchase method of accounting is used to account for the acquisition of subsidiaries by the group. The cost of an acquisition is measured at the fair value of the assets given, equity instruments issued and liabilities incurred or assumed at the date of exchange. Acquisition costs are expensed. Identifiable assets acquired (including mineral property interests), liabilities and contingent liabilities assumed in a business combination are measured initially at their fair values at the acquisition date, irrespective of the extent of any non-controlling interest. The excess of the cost of acquisition over the fair value of the group's share of the identifiable net assets acquired is recorded as goodwill or other identifiable intangible assets. If the cost of acquisition is less than the fair value of the net assets of the subsidiary acquired, the difference is recognized directly in the statement of comprehensive income.

Inter-company transactions, balances and unrealized gains on transactions between group companies are eliminated. Unrealized losses are also eliminated unless the transaction provides evidence of an impairment of the asset transferred. Accounting policies of subsidiaries have been changed where necessary to ensure consistency with the policies adopted by the group.

Joint ventures

The group holds interests in a number of joint ventures. In a joint venture the parties that have joint control of the arrangement (the joint venturers) have a right to the net assets of the arrangement. This right is accounted for in the consolidated financial statements using the equity method of accounting. Joint control is considered to exist when there is contractual joint control; control being the power to govern the financial and operating policies of an

entity so as to obtain benefits from the activities and the ability to use its power over the investee to affect the amounts of the group's returns by the joint venturers.

Acquisitions

Except for initial recognition under IFRS 11 transition rules, further investments in additional joint ventures are initially recognized at cost. The cost of an acquisition is measured at the fair value of the assets given, equity instruments issued or liabilities incurred or assumed at the date of exchange, plus costs directly attributable to the acquisition. Goodwill on associated companies and joint ventures represents the excess of the cost of acquisition of the associate or joint venture over the group's share of the fair value of the identifiable net assets of the associate or joint venture and is included in the carrying amount of the investments.

Joint ventures are accounted for using the equity method of accounting. In applying the equity method of accounting, both for existing joint ventures subsequent to the transition date and for any newly acquired joint ventures, the group's share of its joint ventures' post-acquisition profits or losses are recognized in profit or loss and its share of post-acquisition other comprehensive income is recognized in other comprehensive income. These post-acquisition movements and distributions received from the joint venture companies are adjusted against the carrying amount of the investments. When the group's share of losses in an associated or joint venture company equals or exceeds its interest in the joint venture company, including any other unsecured non-current receivables, the group does not recognize further losses, unless it has obligations to make or has made payments on behalf of the associated or joint venture company. Unrealized gains on transactions between the group and its associated and joint venture companies are eliminated to the extent of the group's interest in the associated and joint venture companies. Unrealized losses are also eliminated unless the transaction provides evidence of an impairment of the asset transferred. Trading receivables and payables with joint ventures are classified within trade and other receivables and payables. The accounting policies of associated and joint venture companies have been changed where necessary to ensure consistency with the accounting policies adopted by the group.

Dividends received are classified as operating cash flows in the consolidated cash flow statement.

Investment in subsidiaries and joint ventures

Investment in subsidiaries and joint ventures are stated at cost less any provisions for impairment in the individual financial statements of the company. Dividends are accounted for when the company becomes entitled to receive them. On the disposal of an investment, the difference between the net disposal proceeds and the carrying amount is charged or credited to the statement of comprehensive income.

Segmental reporting

An operating segment is a group of assets and operations engaged in performing mining or advanced exploration that are subject to risks and returns that are different from those of other segments. Other parts of the business are aggregated and treated as part of a 'corporate and exploration' segment. The group provides segmental information using the same categories of information the group's chief operating decision maker utilizes. The group's chief operating decision maker is considered by management to be the board of directors.

The group has only one business segment, that of gold mining. Segment analysis is based on individual mining operations and exploration projects that have a significant amount of capitalized expenditure or other fixed assets.

Foreign currency translation

Functional and presentation currency

Items included in the financial statements of each of the group's entities are measured using the currency of the primary economic environment in which the entity operates (the functional currency). The consolidated financial statements are presented in US dollars, which is also the functional currency of the company and its significant subsidiaries and joint ventures.

Transactions and balances

Foreign currency transactions are translated into the relevant functional currency using the exchange rates prevailing at the date of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognized in the statement of comprehensive income in other income and other expenses.

Property, plant and equipment

Long-lived assets and mine development costs

Long-lived assets including development costs and mine plant facilities (such as processing plants, tailings facilities, raw water dams and power stations) are initially recorded at cost. Development of orebodies includes the development costs of shaft systems and waste rock removal that allows access to reserves that are economically recoverable in the future. Costs associated with underground development are capitalized when the works provide access to the ore body, whereas costs associated with ore extraction from operating ore body sections are treated as operating costs. Where relevant the estimated cost of dismantling the asset and remediating the site is included in the cost of property, plant and equipment, subsequently they are measured at cost less accumulated amortization and impairment.

Development costs consist primarily of direct expenditure incurred to establish or expand productive capacity.

Costs are capitalized during the construction of a new mine until commercial levels of production are achieved (refer to 'commercial production' below), after which the relevant costs are amortized. Costs are capitalized provided that the project is considered to be commercially, technically and economically viable. Such viability is deemed to be achieved when the group is confident that the project will provide a satisfactory return relative to its perceived risks and is sufficiently certain of economic production. Costs which are necessarily incurred while commissioning new assets, in the period before they are capable of operating in the manner intended by management, are capitalized under 'long-lived assets and mine development costs'.

Development costs incurred after the commencement of production are capitalized to the extent they are expected to give rise to a future economic benefit.

Commercial production

The group assesses the stage of each mine construction project to determine when a mine moves into the production stage. The criteria used to assess the start date are determined by the unique nature of each mine construction project and include factors such as the complexity of a plant and its location. The group considers various relevant criteria to assess when the mine construction project is substantially complete and ready for its intended use and moves into the production stage. Some of the criteria would include but are not limited to the following:

The level of capital expenditure compared to construction cost estimates;

Completion of a reasonable period of testing of the mine plant and equipment;

The ability to produce gold in saleable form; and

The ability to sustain commercial levels of gold production.

When a mine construction project moves into the production stage, the capitalization of certain mine construction costs ceases and subsequent costs are either regarded as inventory or expensed, except for capitalizable costs related to subsequent mining asset additions or improvements, open cast stripping, underground mine development or ore reserve development.

Development expenditure approval

Development activities commence after project sanctioning by the appropriate level of management. Judgment is applied by management in determining when a project has reached a stage at which economically recoverable reserves exist such that development may be sanctioned. In exercising this judgment, management is required to make certain estimates and assumptions similar to those described below for capitalized exploration and evaluation expenditure. Any such estimates and assumptions may change as new information becomes available.

Stripping costs

In surface mining operations, the group may find it necessary to remove waste materials to gain access to mineral ore deposits prior to and after production commences. This waste removal activity is known as 'stripping'. Prior to production commencing from a pit, stripping costs are measured internally and capitalized until the point where the overburden has been removed and access to the ore commences. Subsequent to production, waste

stripping continues, either as part of ore extraction as a run of mine activity or due to strategic decisions such as pit push-back campaigns. There are two benefits accruing to the group from stripping activity during the production phase: usable ore that can be used to produce inventory and improved access to further quantities of material that will be mined in future periods. Economic ore extracted during this period and is subsequently accounted for as inventory. The production stripping costs relating to improved access to further quantities in future periods are capitalized as a stripping activity asset, if and only if, all of the following are met:

It is probable that the future economic benefit (improved access to the orebody) associated with the stripping activity will flow to the group;

- The group can identify the component of the ore body for which access has been improved; and

- The costs relating to the stripping activity associated with that component or components can be measured reliably.

In determining the relevant component of the orebody for which access is improved, the group componentizes each of its mines into geographically distinct orebody sections or phases to which the stripping activities being undertaken within that component are allocated. Such phases are determined based on assessment of factors such as geology and mine planning.

Once determined that any portion of the production stripping costs should be capitalized, the group typically uses the average stripping ratio of the component or phase of the mine to which the production stripping cost related to determine the amount of the production stripping costs that should be capitalized.

The group depreciates the deferred costs capitalized as stripping assets on a unit of production method, with reference the ex-pit ore treated from the relevant ore body component or phase.

Short-lived assets

Short-lived assets, including non-mining assets are shown at cost less accumulated depreciation and impairment.

Depreciation and amortization

Long-lived assets include mining properties, such as freehold land, metallurgical plant, tailings facilities, raw water dams, power plants and mine infrastructure, as well as mine development costs and are depreciated on a unit of production basis.

Depreciation and amortization are charged over the life of the mine (or over the remaining useful life of the asset, if shorter) based on estimated ore tonnes contained in proven and probable reserves to be extracted using the relevant asset. As an example, underground assets are depreciated over underground proven and probable reserves and tonnes milled from those ore bodies. No future capital expenditure is included in the depreciable value. Proven and probable ore reserves reflect estimated quantities of economically recoverable reserves, which can be recovered in the future from known mineral deposits. Only proven and probable reserves are used in the tonnes milled units of production depreciation calculation. Any changes to the expected life of the mine (or asset) are applied prospectively in calculating depreciation and amortization charges.

Depreciation of construction and development costs for new mines commences when commercial production is achieved, as detailed above. Underground development costs are depreciated from the date the development provides access to operational areas and ore extraction begins from those areas. Other assets under construction, such as plant improvement projects, are depreciated from the date they are commissioned, based on assessment by the group's engineers.

Short-lived assets which include motor vehicles, office equipment and computer equipment are depreciated over estimated useful lives of between two to five years but limited to the remaining mine life. Residual values and useful lives are reviewed, and adjusted if appropriate, at each statement of financial position date. Changes to the estimated residual values or useful lives are accounted for prospectively. Depreciation starts when the assets are ready and available for use.

Impairment

The carrying amount of the property, plant and equipment and investments in joint ventures of the group is compared to the recoverable amount of the assets whenever events or changes in circumstances indicate that the net

book value may not be recoverable. The recoverable amount is the higher of value in use and the fair value less cost to sell. In assessing the value in use, the expected future cash flows from the assets is determined by applying a discount rate to the anticipated risk adjusted future cash flows. The discount rate used is the group's weighted average cost of capital adjusted for asset specific factors when applicable. An impairment is recognized in the income statement to the extent that the carrying amount exceeds the assets' recoverable amount. Only proven and probable reserves are used in the calculations and the models use the approved mine plans and exclude capital expenditure which enhance the assets or extractable ore tonnes outside of such approved mine plans. The revised carrying amounts are amortized in line with group accounting policies.

A previously recognized impairment loss is reversed if the recoverable amount increases as a result of a reversal of the conditions that originally resulted in the impairment. This reversal is recognized in the income statement and is limited to the carrying amount that would have been determined, net of depreciation, had no impairment loss been recognized in prior years. Assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash- generating units) for purposes of assessing impairment. The estimates of future discounted cash flows are subject to risks and uncertainties including the future gold price. It is therefore reasonably possible that changes could occur which may affect the recoverability of property, plant and equipment investments in joint ventures.

Inventories

Inventories include ore stockpiles, gold in process and doré supplies, stores and materials, and are stated at the lower of cost or net realizable value. The cost of ore stockpiles and gold produced is determined principally by the weighted average cost method using related production costs.

Cost of stockpiles include costs incurred up to the point of stockpiling, such as mining and grade control costs, but exclude future costs of production. Ore extracted is allocated to stockpiles based on estimated grade, with grades below defined cut-off levels treated as waste and expensed. While held in physically separate stockpiles, the group blends the ore from each stockpile at an individual mine when feeding the processing plant to achieve the resultant gold content. In such circumstances, lower and higher grade ore stockpiles each represent a raw material, used in conjunction with each other, to deliver overall gold production, as supported by the relevant feed plan.

Morila's full grade ore stockpile is above 1.4g/t and marginal ore is defined as ore below 1.4g/t but greater than 1.0g/t. At Loulo, full grade open pit stockpile material is above 1.2g/t for Loulo 3 and Gara, while Yalea is above 0.7g/t. No Yalea or Gara underground material is on the stockpile since all ore mined is fed. At Goukoto, the full grade ore stockpile is above 1.67g/t and marginal ore above 1.26g/t. Tongon's, full grade ore stockpile is above 1.4g/t and marginal ore above 0.9g/t. And Kibali's high and medium grade ore stockpile is above 1.4g/t.

The processing of ore in stockpiles occurs in accordance with the Life of Mine (LoM) processing plan that has been optimized based on the known mineral reserves, current plant capacity and mine design. Ore tonnes contained in the stockpile which exceed the annual tonnes to be milled as per the mine plan in the following year, are classified as non-current in the statement of financial position.

Net realizable value of ore stockpiles is determined with reference to estimated contained gold and market gold prices applicable. Ore stockpiles which are blended together or with future ore mined when fed to the plant are assessed as an input to the gold production process to ensure the combined stockpiles are carried at the lower of cost and net realizable value. Ore stockpiles which are not blended in production are assessed separately to ensure they are carried at the lower of cost and net realizable value, although no such stockpiles are currently held.

Costs of gold inventories include all costs incurred up until production of an ounce of gold such as milling costs, mining costs and directly attributable mine general and administration costs but exclude transport costs, refining costs and royalties. Net realizable value is determined with reference to estimated contained gold and market gold prices.

Stores and materials consist of consumable stores and are valued at weighted average cost after appropriate impairment of redundant and slow moving items. Consumable stock for which the group has substantially all the risks and rewards of ownership are brought onto the statement of financial position as current assets.

Interest/borrowing costs

Interest is recognized on a time proportion basis, taking into account the principal outstanding and the effective rate over the period to maturity. Borrowing cost is expensed as incurred except to the extent that it relates

directly to the construction of property, plant and equipment during the time that is required to complete and prepare the asset for its intended use, when it is capitalized as part of property, plant and equipment. Borrowing cost is capitalized as part of the cost of the asset where it is probable that the asset will result in economic benefit and where the borrowing cost can be measured reliably. No interest or borrowing costs have been capitalized during the year.

Royalties

Royalty arrangements based on mineral production are in place at each operating mine. The primary type of royalty is a net smelter return royalty. Under this type of royalty the group pays the holder an amount calculated as the royalty percentage multiplied by the value of gold production at market gold prices less selling costs. A royalty expense is recorded when revenue from the sale of gold is recognized.

Financial instruments

Financial instruments are measured as set out below. Financial instruments carried on the statement of financial position include cash and cash equivalents, trade and other receivables, trade and other payables, available for sale financial assets, loans to and from subsidiaries and joint ventures and loans to minorities.

Cash and cash equivalents

Cash and cash equivalents are carried in the statement of financial position at cost. For the purpose of the cash flow statement, cash and cash equivalents comprise cash on hand, deposits held at call with banks, other short term highly liquid investments with a maturity of three months or less at the date of purchase and bank overdrafts. In the statement of financial position, bank overdrafts are included in borrowings in current liabilities.

Trade and other receivables

Trade and other receivables are recognized initially at fair value. There is a rebuttable presumption that the transaction price is fair value unless this could be refuted by reference to market indicators. Subsequently, trade and other receivables are measured at amortized cost using the effective interest method, less provision for impairment. A provision for impairment of trade receivables is established when there is objective evidence that the group will not be able to collect all amounts due according to the original terms of receivables. Significant financial difficulties of the

debtor, probability that the debtor will enter bankruptcy or financial reorganization, and default or delinquency in payments are considered indicators that the trade receivable may be impaired. The amount of the provision is the difference between the asset's carrying amount and the present value of estimated future cash flows, discounted at the effective interest rate. The amount of the provision is recognized in mining and processing costs in the statement of comprehensive income.

Available-for-sale financial assets

Available-for-sale financial assets are non-derivatives that are either designated in this category or not classified in any of the other categories. Available-for-sale financial assets are designated on acquisition. They are normally included in current assets and are carried at fair value. Where a decline in the fair value of an available-for-sale financial asset constitutes objective evidence of impairment, the amount of the loss is recognized in the statement of comprehensive income within other expenses, other movements in fair value are recognized in other reserves within equity.

Borrowings (including bank borrowings when applicable, loans from subsidiaries, joint ventures and minorities)

Borrowings are recognized initially at fair value, which equates to the proceeds received, net of transaction costs incurred. Borrowings are subsequently stated at amortized cost; any difference between the proceeds (net of transaction costs) and the redemption value is recognized in the statement of comprehensive income over the period of the borrowings using the effective interest method. Borrowings are classified as current liabilities unless the group has an unconditional right to defer settlement of the liability for at least 12 months after the statement of financial position date.

Trade and other payables

Accounts payable and other short term monetary liabilities, are initially recognized at fair value, which equates to the transaction price, and subsequently carried at amortized cost using the effective interest method.

Rehabilitation costs

The net present value of estimated future rehabilitation costs is provided for in the financial statements and capitalized within property, plant and equipment on initial recognition. Rehabilitation will generally occur on closure or after closure of a mine. Initial recognition is at the time of the construction or disturbance occurring and thereafter as and when additional construction or disturbances take place. The estimates are reviewed annually to take into account the effects of inflation and changes in estimated risk adjusted rehabilitation works cost and are discounted using rates that reflect the time value of money. Annual increases in the provision due to the unwinding of the discount are recognized in the statement of comprehensive income as a finance cost. The present value of additional disturbances and changes in the estimate of the rehabilitation liability are recorded to mining assets against an increase/decrease in the rehabilitation provision. The rehabilitation asset is amortized as noted previously. Rehabilitation projects undertaken, included in the estimates, are charged to the provision as incurred. Environmental liabilities, other than rehabilitation costs, which relate to liabilities arising from specific events, are expensed when they are known, probable and may be reasonably estimated.

Provisions

Provisions are recognized when the group has a present legal or constructive obligation as a result of past events where it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation, and a reliable estimate of the amount of the obligation can be made.

Current tax

Current tax is the tax expected to be payable on the taxable income for the year calculated using rates (and laws) that have been enacted or substantively enacted by the statement of financial position date. It includes adjustments for tax expected to be payable or recoverable in respect of previous periods.

Taxation paid in the statement of consolidated cash flows relates to corporate tax liability payments. In Mali, the State is not reimbursing TVA due to the group required under the legally binding mining convention. The group has an existing legal right under its mining convention to offset the TVA against corporate tax as it falls due. As a result, payments made under the TVA taxation system are being made in the knowledge that such payments first represent payments on account for corporate tax. The group records such payments as 'taxation paid' in the statement of consolidated cash flows as this is considered to present a more appropriate reflection of the group's corporate tax contribution by management. Once corporate tax liabilities are met, the remaining payments under the TVA system represent normal recoverable TVA and are not reflected in the statement of consolidated cash flows as 'taxation paid.'

Deferred taxation

Deferred tax is provided in full, using the liability method, on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the consolidated financial statements. However, if the temporary difference arises from initial recognition of an asset or liability in a transaction other than a business combination that at the time of the transaction affects neither accounting nor taxable profit nor loss, it is not recognized. Deferred tax is determined using tax rates (and laws) that have been enacted or substantively enacted by the statement of financial position date and are expected to apply when the temporary differences reverses. Deferred tax assets are recognized to the extent that it is probable that future taxable profit will be available against which the temporary differences can be utilized. Deferred tax is provided on temporary differences arising on investments in subsidiaries and joint ventures, except where the timing of the reversal of the temporary difference is controlled by the group and it is probable that the temporary difference will not reverse in the foreseeable future.

Accounting for Goukoto non-controlling interest priority dividends

Under the statutory requirements of the 1999 Malian Mining Code (the Code), the State of Mali is entitled to advanced payment of dividends. The advanced payment entitlement is calculated based on 10% of profits after certain deductions. The advanced dividends paid are deducted from the ordinary dividends that the government receives under its 20% equity interest in Goukoto. Given the statute, a liability is recognized at each balance sheet date based on 10% of the accrued profit measure. The liability is extinguished upon the subsequent payment of the advanced dividend. An 'other receivables' asset is recorded as the advanced dividend automatically entitles Goukoto to reduce future cash flows paid to the State of Mali and creates economic benefit. The carrying value of the asset is reviewed for impairment. Ordinary dividends are recorded as a reduction in non-controlling interest once declared.

Contingent liabilities

The group discloses contingent liabilities when possible obligations exist as a result of past events, unless the possible outflows of economic benefits are considered remote. By their nature, contingencies will often only be resolved when one or more future events occur or fail to occur. The assessment of such contingencies inherently involves the exercise of significant judgment and estimates of the outcome of future events. In certain circumstances, to provide transparency, the group voluntarily elects to disclose information regarding claims for which any outflow of economic benefit is considered remote.

Share capital

Ordinary shares are classified as equity. Incremental costs directly attributable to the issue of new shares or options are shown in equity as a deduction from the proceeds.

Employee benefits

Pension obligations

The group has defined contribution plans. A defined contribution plan is a pension plan under which the group pays fixed contributions into a separate entity. The group has no legal or constructive obligations to pay further contributions if the fund does not hold sufficient assets to pay all employees the benefits relating to employee service in the current and prior periods. For defined contribution plans, the group pays contributions to publicly or privately administered provident funds on a mandatory, contractual or voluntary basis. The group has no further payment obligations once the contributions have been paid. The contributions are recognized as employee benefit expenses when they are due. Prepaid contributions are recognized as an asset to the extent that a cash refund or a reduction in the future payments is available.

Termination benefits

Termination benefits are payable when employment is terminated before the normal retirement date, or whenever an employee accepts voluntary redundancy in exchange for these benefits. The group recognizes termination benefits when it is demonstrably committed to either: terminating the employment of current employees according to a

detailed formal plan without possibility of withdrawal; or providing termination benefits as a result of an offer made to encourage voluntary redundancy. Benefits falling due more than 12 months after statement of financial position date are discounted to present value.

Profit-sharing and bonus plans

The group recognizes a liability and an expense for bonuses. The group recognizes a provision where contractually obliged or where there is a past practice that has created a constructive obligation.

Share-based payments

The fair value of the employee services received in exchange for the grant of options, restricted shares or participation in the group's CIP is recognized as an expense. The total amount to be expensed over the vesting period is determined by reference to the fair value of the options or shares awards determined at the grant date:

Awards including any market performance conditions (for example, the correlation used between the Euromoney Global Gold Index (formerly the HSBC Global Gold Index) and the company total shareholder return (TSR)); and

Excluding the impact of any service and non-market performance vesting conditions (for example, profitability, reserve growth targets and remaining an employee of the entity over a specified time period).

Non-market vesting conditions are included in assumptions about the number of options that are expected to become exercisable or the number of shares that the employee will ultimately receive. This estimate is revised at each statement of financial position date and the difference is charged or credited to the statement of comprehensive income, with a corresponding adjustment to equity. Market performance conditions are included in the fair value assumptions on the grant date with no subsequent adjustment. The proceeds received on exercise of the options net of any directly attributable transaction costs are credited to equity. When the options are exercised, the company issues new shares. The proceeds received net of any directly attributable transaction costs are credited to share

capital (nominal value) and share premium when the options are exercised. Transfers are made between other reserves and share premium when options are exercised and shares vest for the cumulative share based expense.

Leases

Determining whether an arrangement is, or contains, a lease is based on the substance of the arrangement and requires an assessment of whether fulfilment of the arrangement is dependent on the use of a specific asset or assets and whether the arrangement conveys a right to use the asset. Leases of plant and equipment where the group assumes a significant portion of risks and rewards of ownership are classified as a finance lease. Finance leases are capitalized at the estimated present value of the underlying lease payments. Each lease payment is allocated between the liability and the finance charges to achieve a constant rate on the finance balance outstanding. The interest portion of the finance payment is charged to the statement of comprehensive income over the lease period. The plant and equipment acquired under the finance lease are depreciated over the useful lives of the assets, or over the lease term if shorter.

Leases in which a significant portion of the risks and rewards of ownership are retained by the lessor are classified as operating leases. Payments made under operating leases are charged to the statement of comprehensive income on a straight-line basis over the period of the lease.

Revenue recognition

The company enters into contracts for the sale of gold. Revenue arising from gold sales under these contracts is recognized when the price is determinable, the product has been delivered in accordance with the terms of the contract, the significant risks and rewards of ownership have been transferred to the customer and collection of the sales price is reasonably assured. These criteria are met when the gold leaves the mines' smelt houses. As sales from gold contracts are subject to customer survey adjustment, sales are initially recorded on a provisional basis using the group's best estimate of the contained metal. Subsequent adjustments are recorded in revenue to take into account final assay and weight certificates from the refinery, if different from the initial certificates. The differences between the estimated and actual contained gold have historically not been significant.

Exploration and evaluation costs

The group expenses all exploration and evaluation expenditures until the directors conclude that a future economic benefit is more likely than not of being realized, i.e. 'probable'. While the criteria for concluding that an expenditure should be capitalized is always probable, the information that the directors use to make that determination depends on

the level of exploration.

Exploration and evaluation expenditure on brownfield sites, being those adjacent to mineral deposits which are already being mined or developed, is expensed as incurred until the directors are able to demonstrate that future economic benefits are probable through the completion of a prefeasibility study, after which the expenditure is capitalized as a mine development cost. A 'prefeasibility study' consists of a comprehensive study of the viability of a mineral project that has advanced to a stage where the mining method, in the case of underground mining, or the pit configuration, in the case of an open pit, has been established, and which, if an effective method of mineral processing has been determined, includes a financial analysis based on reasonable assumptions of technical, engineering, operating economic factors and the evaluation of other relevant factors. The prefeasibility study, when combined with existing knowledge of the mineral property that is adjacent to mineral deposits that are already being mined or developed, allow the directors to conclude that it is more likely than not that the group will obtain future economic benefit from the expenditures.

Exploration and evaluation expenditure on greenfield sites, being those where the group does not have any mineral deposits which are already being mined or developed, is expensed until such time as the directors have sufficient information to determine that future economic benefits are probable, after which the expenditure is capitalized as a mine development cost. The information required by directors is typically a final feasibility study however a prefeasibility study may be deemed to be sufficient where the additional work required to prepare a final feasibility study is not significant or the work done at prefeasibility level clearly demonstrates an economic asset. Exploration and evaluation expenditure relating to extensions of mineral deposits which are already being mined or developed, including expenditure on the definition of mineralization of such mineral deposits, is capitalized as a mine development cost following the completion of an economic evaluation equivalent to a prefeasibility study. This economic evaluation is distinguished from a prefeasibility study in that some of the information that would normally be determined in a prefeasibility study is instead obtained from the existing mine or development. This

F-16

information when combined with existing knowledge of the mineral property already being mined or developed allow the directors to conclude that more likely than not the group will obtain future economic benefit from the expenditures. Costs relating to property acquisitions are capitalized within development costs.

Dividend distribution

Dividend distribution to the company's shareholders is recognized as a liability in the group's financial statements in the period in which the dividends are approved by the board of directors and declared to shareholders.

Earnings per share

Earnings per share are computed by dividing net income by the weighted average number of ordinary shares in issue during the year.

Diluted earnings per share

Diluted earnings per share are presented when the inclusion of potential ordinary shares has a dilutive effect on earnings per share.

3. Key accounting estimates and judgments

Some of the accounting policies require the application of significant judgment by management in selecting the appropriate assumptions for calculating financial estimates or determining the appropriate accounting treatment for a transaction.

By their nature, these judgments are subject to an inherent degree of uncertainty and are based on historical experience, terms of existing contracts, management's view on trends in the gold mining industry and information from outside sources. The estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year are discussed below.

TVA

Included in trade and other receivables are taxation debtor receivables of \$106.8 million (\$80.5 million current and \$26.3 million non-current) (2013: \$125.7 million) (2013: \$76.7 million current and \$49.0 million non-current) consisting primarily of TVA balances owing by the fiscal authorities in Mali. A further \$50.5 million (2013: \$36.4 million) (at 45% attributable share) is included in the underlying statement of financial position of the Kibali joint venture. In Mali the TVA owing is being offset against other tax owing to the State, in accordance with the legal right of offset under the relevant mining conventions.

Profit forecasts for the mine, using approved budgets and mine plans, supports recovery of the balance through such offsetting by 2018 (2013: 2015), although the recovery and timing is subject to estimates of factors such as gold price and production. The gold price is consistent with that used in the group's impairment tests detailed below. We are also continuing to engage with authorities in Mali to accelerate the repayment of the outstanding TVA balances. The group continues to seek recovery of TVA in the DRC, in line with the mining code and the carrying value of the receivable has been assessed considering factors such as the level of receipts in the period and to date, relationships and communications with government officials and the tax authority and the limited quantum of disputed submissions. Judgment exists in assessing recovery of these receivables.

Corporation tax claims

The group is in receipt of claims for various taxes from the State of Mali totaling \$313.0 million (December 31, 2013: \$123.1 million), in respect of the Loulo, Goukoto and Morila (40% joint venture interest) mines, together with Kankou Moussa, its Malian gold sales operation. Having taken professional advice, the group considers the material claims to be without foundation and is strongly defending its position, including following the appropriate legal process for disputes within Mali. Accordingly, no material provision has been made for the claims.

The claims have increased by \$190.0 million in the year, substantially representing \$201.3 million of additional claims received in respect of Loulo and Goukoto following the tax audits during the year, offset by foreign exchange movements.

Loulo, Goukoto and Morila have legally binding mining conventions which guarantee fiscal stability, govern the taxes applicable to the companies and allow for international arbitration in the event a dispute cannot be resolved in the country. Management continues to engage with the Malian authorities at the highest level to resolve

this issue. During the prior year, Loulo submitted a request for arbitration at the International Centre of the Settlement of Investment Disputes against the State of Mali in relation to certain of the disputed tax claims. The arbitration process is ongoing, and the outcome of the process is expected to be concluded during 2015.

Carrying values of property, plant and equipment and joint venture investments

The group assesses at each reporting period whether there is any indication that these assets may be impaired. If such indication exists, the group estimates the recoverable amount of the asset. The recoverable amount is assessed by reference to the higher of 'value in use' (being the net present value of expected future cash flows of the relevant cash generating unit) and 'fair value less cost to sell'. The estimates used for impairment reviews are based on detailed approved mine plans and operating plans. Future cash flows are based on estimates of:

The quantities of the proven and probable reserves being those for which there is a high degree of confidence in economic extraction;

Future production levels;

Future commodity prices, including oil forecast at \$100/bbl;

Future cash cost of production and capital expenditure associated with extraction of the proven and probable reserves in the approved mine plan;

Future gold prices – a gold price curve from a leading merchant bank was used for the impairment calculations starting at a \$1,250/oz gold price (2013: \$1,250/oz) and increasing at an average of 3%. Beyond the gold curve period provided by the merchant bank, the board have estimated the long term gold price increasing at 3%; and

a discount rate of 7.3% pre-tax (2013: 9.4%).

Production forecasts include a forecast increase in recovery rates at Tongon from 78.0% to 87.5% for the remaining LoM, which is considered by the group to be an appropriate estimate given the capital program that began in 2014 to upgrade the flotation circuit. However, headroom remains at current recovery rates.

The impairment tests did not indicate impairment and head room existed at each mine. Given the significance of the gold price and the longevity of mine plans, the directors consider the gold price and discount rate sensitivities to be

relevant.

A reduction in forward gold prices in excess of 16.5% is required to give rise to an impairment at the material mines. The discount rate would need to increase to 14.1% to give rise to impairment at any of the mines with the greatest discount rate sensitivity being at Kibali.

However, having considered such scenarios, the directors remain satisfied that no impairment is appropriate. The models are considered suitably conservative with proven and probable reserves determined based on \$1,000/oz gold price (2013: \$1,000/oz) as shown below.

Capitalization and depreciation

There are several methods for calculating depreciation, i.e. the straight line method, the production method using ounces produced and the production method using tonnes milled. The directors believe that the tonnes milled method is the best indication of plant and infrastructure usage. Refer to note 2 for the depreciation policy. Estimates are required regarding the allocation of assets to relevant proven and probable reserves in the units of production calculations, with assessments involving the group's mining, capital and geology departments. Proven and probable reserves are used in each depreciation calculation, which is considered to be a suitably conservative measure of the future ore extractable using existing assets. Expenditure incurred to date in underground infrastructure development, is depreciated over the remaining proven and probable reserves of the underground mine, as the infrastructure provides access to the future mining areas.

The group applies judgment in allocating costs between operating and capital items in respect of underground mining and in determining the date depreciation commences. Costs are capitalized when the activity provides access to future ore bodies and are expensed as operating costs when the works involve extraction of ore from operational sections of the orebody. Capitalized costs on underground development are depreciated when

commercial extraction levels commence. The nature of activity is assessed based on information provided by contractors, together with inspections by the group's mining teams.

Judgment is required in determining the point at which assets under construction at Kibali, such as the sulphide circuit, began commercial production and should be depreciated. Depreciation start dates are determined considering the factors detailed in note 2. Additionally, given ongoing mine construction and development, judgment was required in allocating costs between operating costs, ore stockpiles and ongoing capital works. Costs have been allocated based on the underlying activity and economic benefits.

Gold price assumptions

The following gold prices were used in the mineral reserves optimization calculations

\$/oz	2014	2013	2012
Morila	1,000	1,000	1,000
Loulo	1,000	1,000	1,000
Tongon	1,000	1,000	1,000
Kibali	1,000	1,000	1,000
Massawa	1,000	1,000	1,000
Goukoto	1,000	1,000	1,000

Changes in the gold price used could result in changes in the mineral reserve optimization calculations which impact LoM plans. Mine modelling is a complex process and hence it is not feasible to perform sensitivities on gold price assumptions in respect of ore reserves.

Determination of ore reserves

The group estimates its ore reserves and mineral resources based on information compiled by Competent Persons as defined in accordance with the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves of December 2012 (the JORC Code 2012 Edition). Reserves determined in this way are used in the calculation of depreciation and amortization, as well as the assessment of the carrying value of mining assets and timing of mine closure obligations. There are numerous uncertainties inherent in estimating ore reserves and assumptions that are valid at the time of estimation may change significantly when new information becomes available. Changes in the forecast prices of commodities, exchange rates, production costs or recovery rates may change the economic status of reserves and may, ultimately, result in the reserves being restated.

Future rehabilitation obligations

The net present value of current rehabilitation estimates have been discounted to their present value at 2% per annum (2013: 2.5%) being the prevailing risk free interest rates. Expenditure is generally expected to be incurred at the end of the respective mine lives. The group undertakes regular assessments by external experts of its mine closure plans, together with assessments by internal staff in the intervening periods, to determine the required rehabilitation works, cost of works and timing of such works. Judgment is required in determining the appropriate costs, timing of costs, discount rates and inflation. The Morila rehabilitation estimate at December 31, 2014, which is held in the underlying statement of financial position of the equity accounted joint venture, includes the impact of the approved tailings storage facility retreatment program, where the retreated tailings and non-viable tailings will be deposited in the pit. For further information, including the carrying amounts of the liabilities, refer to note 14. A 1% change in the discount rate on the group's rehabilitation estimates would result in an impact of \$7.0 million (2013: \$7.1 million) on the provision for environmental rehabilitation, and an impact of \$0.5 million (2013: \$0.5 million) on the statement of comprehensive income.

Stockpiles, gold in process and product inventories

Costs that are incurred in or benefit the productive process are accumulated as stockpiles, gold in process and product inventories. Net realizable value tests are performed at least annually and represent the estimated future sales price of the product based on contained gold and metals prices, less estimated costs to complete production and bring the product to sale. Judgment is required in assessing whether stockpiles of different grades should be tested individually, or tested as inputs to the gold production process, as detailed in the group's accounting policy. In the current year, the stockpiles were tested for each individual mine, reflecting the planned blended feed of such stockpiles to the mill on the basis that they are blended together and with future ore mined.

Stockpile quantities are measured by estimating the number of tonnes added and removed from the stockpile, the number of contained gold ounces based on assay data, and the estimated recovery percentage based on the expected processing method. Stockpile tonnages are verified by periodic surveys.

F-20

Post production open cast mine stripping

The group capitalizes costs associated with stripping activity, to expose the orebody, within mining assets. Judgment is required in determining the relevant section or phase of the ore body to which stripping activity relates, based on assessment of factors such as mine planning, geology of the open cast pits and strategic board decisions such as the pushback campaigns. The group subsequently depreciates relevant stripping assets as that section of the orebody is mined. This similarly requires judgment over the eligible costs and the relevant section of the orebody for depreciation.

Exploration and evaluation expenditure

The group has to apply judgment in determining whether exploration and evaluation expenditure should be capitalized or expensed. Management exercises this judgment based on the results of economic evaluations, prefeasibility or feasibility studies. Costs are capitalized where those studies conclude that more likely than not the group will obtain future economic benefit from the expenditures.

Share-based payments

Refer to note 15 for the key assumptions used in determining the value of share-based payments.

4. Income Taxes

	Note	Year ended	Year ended	Year ended
		Dec 31, 2014	Dec 31, 2013	Dec 31, 2012
\$000				
Current taxation		79,532	76,935	31,039
Deferred taxation	11	2,353	(221)	6,015
		81,885	76,714	37,054

The tax on the group's profit before tax differs from the theoretical amount that would arise using the statutory tax rate applicable to the group's operations.

Profit before tax	353,045	402,461	547,836
Tax calculated at effective tax rate of 30%	105,914	120,738	164,351
Reconciling items:			

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Income taxed at 0%	(14,359)	(54,309)	(67,632)
Expenses deductible at 0%	9,611		35,634		62,133	
Mali tax holiday permanent differences	-		(10,950)	(73,658)
Côte d'Ivoire tax holiday permanent differences	(7,994)	(20,362)	(36,849)
Net capital allowances not deductible	2,353		5,803		1,344	
Deferred stripping costs adjustment	-		(5,815)	5,469	
Share of equity accounted joint venture profits	(22,783)	(7,444)	(20,456)
Other permanent differences	9,143		13,419		2,352	
Taxation charge	81,885		76,714		37,054	

The company is subject to an income tax rate in Jersey at 0%. Loulo benefited from a five-year tax holiday in Mali until the tax exoneration period expired on November 7, 2010. Tongon benefits from a five-year tax holiday in Côte d'Ivoire from the commencement of production in December 2010. Goukoto benefited from a two year tax holiday until the tax exoneration expired on June 1, 2013. It has a further tax holiday, up to a maximum of five years in total, in the event of further capital investment, such as an underground mine. The benefit of the tax holidays to the group was to increase its net profit by \$8.0 million (2013: \$31.3 million; 2012: \$110.5 million). Accordingly, had the group not benefited from the tax holidays in Mali and Côte d'Ivoire, earnings per share would have been reduced by \$0.09, \$0.34 and \$1.20 for the years ended December 31, 2014, 2013 and 2012 respectively. Under Malian tax law, income tax is based on the greater of 30% of taxable income or 0.75% of gross revenue. Under Ivorian tax law, income tax is based on the greater of 25% of taxable income or 0.5% of gross revenue. The Loulo, Goukoto and Tongon operations have no assessable capital expenditure carry forwards for assessable tax losses, at December 31, 2014, 2013 and 2012 collectively, for deduction against future mining income. The group's share of profits from equity accounted joint ventures is stated net of \$20.9 million (2013: \$7.4 million; 2012: \$20.5 million) of current and deferred tax charges primarily in respect of Morila and Kibali.

5. Share capital and premium

The total authorized number of ordinary shares is 120 million (2013: 120 million; 2012: 120 million) of US 5 cents (2013: US 5 cents; 2012: US 5 cents). All issued shares are fully paid. The total number of issued shares at December 31, 2014 was 92,674,085 shares (2013: 92,245,531; 2012: 92,061,153). Refer to the statement of changes in equity on page F-4 for more detail on the annual movement of the number of ordinary shares, share capital and share premium, including the movement arising from the issue of restricted shares, exercise of share options and vesting of share awards and the scrip dividends.

6. Earnings and dividends per share

	Income (numerator) \$000	Shares (denominator)	Per share amount \$
For the year ended December 31, 2014			
Basic earnings per share			
Shares outstanding at January 1, 2014		92,245,531	
Weighted number of shares issued		357,660	
Income available to shareholders	234,974	92,603,191	2.54
Effective of dilutive securities			
Share options		103,398	
Restricted shares		807,072	
Diluted earnings per share	234,974	93,513,661	2.51
For the year ended December 31, 2013			
Basic earnings per share			
Shares outstanding at January 1, 2013		92,061,153	
Weighted number of shares issued		152,358	
Income available to shareholders	278,382	92,213,511	3.02
Effective of dilutive securities			
Share options		268,615	
Restricted shares		863,983	
Diluted earnings per share	278,382	93,346,109	2.98
For the year ended December 31, 2012			
Basic earnings per share			
Shares outstanding at January 1, 2012		91,717,070	
Weighted number of shares issued		194,474	
Income available to shareholders	431,801	91,911,544	4.70
Effective of dilutive securities			
Share options		396,180	
Restricted shares		517,202	
Diluted earnings per share	431,801	92,824,926	4.65

Refer to note 15 for details on share options and share awards issued to employees. \$46.3 million (\$0.50 per share) was paid as dividends in 2014 (2013: \$46.1 million/\$0.50 per share; 2012: \$36.7 million/\$0.40 per share) of which \$43.3 million was paid in cash and \$3 million was paid as scrip dividends. On February 6 2015, the board of directors proposed an annual dividend of \$0.60 per share which, if approved, will result in an aggregate dividend payment of \$55.6 million and is expected to be paid in May 2015. The proposed dividend in respect of 2014 is subject to shareholder approval at the annual general meeting to be held on May 5 2015. An optional scrip dividend has been proposed whereby shareholders can elect to receive new ordinary shares in the company.

584,199 restricted share awards were also antidilutive at December 31, 2014 (2013: 601,084; 2012: 463,441). The total number of potentially issuable shares at December 31, 2014 was 1,712,651 (2013: 1,680,652; 2012: 1,271,842).

7. Trade and other receivables

\$000	Note	Dec 31, 2014	Dec 31, 2014
Trade		23,503	20,458
Advances to contractors		9,130	17,782
Taxation debtors	7.1	107,434	131,029
Prepayments and other receivables		60,318	54,843
Goukoto advance dividend	7.2	11,125	10,965
Total		211,510	235,077
Less: current portion		(185,233)	(186,054)
Long term portion	7.1	26,277	49,023

The taxation debtors primarily relate to indirect taxes owing to the group by the State of Mali, including TVA balances at Loulo of \$91.3 million (2013: \$115.6 million) and Goukoto of \$14.5 million (2013: \$10.1 million).

7.1 The taxation debtor further included TVA balances at Tongon of \$4.2 million in 2013 (2014: \$nil), as well as refundable duties of \$1.0 million at Loulo (2013: \$1.1 million). Non-current receivables consist of TVA balances at Loulo expected to be recovered through offsets of TVA offset against future taxes payable in accordance with the legally binding mining convention after one year.

7.2 Refer to note 2 for details of the Goukoto dividend.

The classes within trade and other receivables do not contain impaired assets. The carrying values are considered to approximate fair values.

The credit quality of receivables that are not past due or impaired is considered high. The maximum exposure to credit risk at the reporting date is the fair value of each class of receivable mentioned above. The group does not hold any collateral as security although it has the legally binding right to offset TVA balances against other taxation payable in Mali, and exercises this right. Refer to note 17 for further information on the concentration of credit risk.

The terms of payment of trade receivables are less than seven days, advances to contractors are 30 days and taxation debtors are six months.

8. Inventories and ore stockpiles

\$000	Dec 31, 2014	Dec 31, 2014
--------------	-------------------------	-------------------------

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Consumable stores	90,778	132,490
Stockpiles	191,398	173,658
Gold in process	22,354	16,277
Total inventories and ore stockpiles	304,530	322,425
Less: current portion	(126,216)	(180,415)
Long term portion	178,314	142,010

All inventory and ore stockpiles are stated at the lower of cost or net realizable value. Non-current ore stockpiles reflect ore tonnes not planned to be processed within the next 12 months.

F-23

9. Property, plant and equipment

\$000	Dec 31, 2014	Dec 31, 2013
Mine properties, mine development costs and mine plant facilities and equipment cost		
At the beginning of year	1,886,054	1,592,781
Additions	183,792	293,273
	2,069,846	1,886,054
Accumulated depreciation and amortization		
At beginning of year	428,554	297,916
Charge for the year	146,762	130,638
	575,316	428,554
Net book value	1,494,530	1,457,500

Long-lived assets

Included in property, plant and equipment are long-lived assets which are amortized on a units of production basis as detailed in note 2 and comprise the metallurgical plants, tailings and raw water dams, power plants and mine infrastructure and development costs. The net book value of these assets was \$1,467.1 million at December 31, 2014 (2013: \$1,436.3 million).

Short-lived assets

Included in property, plant and equipment are short-lived assets which are amortized over their useful lives and are comprised of motor vehicles and other equipment. The net book value of these assets was \$14.5 million at December 31, 2014 (2013: \$8.1 million).

Undeveloped property

Included in property, plant and equipment are undeveloped property costs of \$2.0 million (2013: \$2.2 million).

Post production stripping

Property, plant and equipment includes capitalized stripping costs, related to the production phase of opencast mining. The net book value at December 31, 2014 was \$10.9 million (2013: \$10.9 million).

	Dec 31, 2014	Dec 31, 2013
The remaining maximum estimated useful lives in respect of proven and probable reserves for each mine included above is as follows:		
Loulo	14 years	15 years
Goukoto	11 years	12 years
Tongon	7 years	7 years

F-24

10. Investments in joint ventures and details of material non-controlling interests

Material non-controlling interests

Randgold owns 80% of Loulo and Goukoto through the intermediary holding companies Randgold Resources (Somilo) Ltd and Randgold Resources (Goukoto) Ltd respectively, with the State of Mali owning 20%. Randgold owns 89% of Tongon through the intermediary holding company Randgold Resources (Cote d'Ivoire) Limited, with the State of Cote d'Ivoire and another outside shareholder owning 10% and 1 % respectively. Randgold has funded these investments by means of shareholder loans including through Mining Investments (Jersey) Ltd, and therefore controls 100% of the cash flows from these mines until the shareholder loans are repaid. These subsidiaries include material non-controlling interests. Details of the nature of the operations is provided in note 1, details of the Goukoto dividend on page F-14 of this annual report and note 2, with summarized financial information provided in note 16. The cumulative non-controlling interest in Loulo is \$94.6 million as at December 31, 2014 (December 31, 2013: \$81.4 million) with its non-controlling interest share of profit of \$13.2 million (December 31, 2013: \$14.0 million), Goukoto is \$66.9 million as at December 31, 2014 (December 31, 2013: \$57.0 million) with its non-controlling interest share of profit of \$20.0 million (December 31, 2013: \$26.1 million) and Tongon is \$44.6 million as at December 31, 2014 (December 31, 2013: \$41.8 million) with its non-controlling interest share of profit of \$2.8 million (December 31, 2013: \$7.3 million). Randgold and AngloGold Ashanti are the joint shareholders of Kibali (Jersey) Limited group which in turn owns an effective 90% interest in Kibali (formerly Kibali Goldmines SPRL), giving an effective 45% interest in Kibali.

Joint ventures

The joint venture agreements and structures for Kibali and Morila, together with the asset leasing joint ventures (KAS 1 Limited (KAS), RAL 1 Limited (RAL 1) and RAL 2 Limited (RAL 2)) provide the group with interests in the net assets of those companies, rather than interests in underlying assets and obligations. Accordingly, under IFRS 11, the group's share of joint ventures has been accounted for using the equity method.

The following tables represent the group's share of the assets and liabilities of the respective joint venture which are included in the consolidated balance sheet and statement of comprehensive income within the total investments in joint ventures, share of profits of equity accounted joint ventures and share of equity accounted joint ventures' other comprehensive expenses.

Investment in joint ventures

The movements in total investments in joint ventures are as follows:

\$000	Year ended Dec 31, 2014	Year ended Dec 31, 2013
Beginning of year

The segment report in note 16 presents information based on the group's effective 45% interest in the underlying Kibali gold mine as reported internally. As such, that differs to the 50% interest in the Kibali (Jersey) Limited Group.

\$000	Dec 31, 2014	Dec 31, 2013
Reconciliation of the group's summarized financial information presented to the carrying amount of the group's interest in the Kibali joint venture		
Opening net assets 1 January	2,457,463	1,567,907
Profit for the period	159,740	57,567
Other comprehensive expense	(72) (799

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

Funding advanced	102,924	832,788
Closing net assets	2,720,055	2,457,463
Interest in joint venture at 50%	1,360,028	1,228,732
Mineral property at acquisition less amortization	31,360	33,453
Adjustment to reflect attributable interest	(4,566)	(4,042)
Carrying value	1,386,822	1,258,143

The group's effective interest in Kibali is 45%. The group holds a 50% joint venture interest in Kibali (Jersey) Limited with AngloGold Ashanti. Joint control is provided through shareholdings and the joint venture agreement. Kibali (Jersey) Limited holds an effective 90% interest in Kibali thereby giving the group an effective 45% interest in that mine. Refer to note 1 for details.

F-26

Note that the KAS asset leasing joint venture in which the group has an effective 25.01% interest is included within the Kibali joint venture as Kibali (Jersey) Limited is the joint venture partner with DTP Terrassement SA (DTP).

KGL Isiro SARL

KGL Isiro SARL is an exploration company in which the group has a 51% interest with Kilo Goldmines Ltd being the joint venture partner. The total exploration expenses incurred in 2014 amounted to \$2.4 million (2013: \$1.2 million), of which \$1.2 million (2013: \$0.6 million) is the group's share. The net loss and net assets are immaterial.

11. Deferred taxation

\$000	Note	Dec 31, 2014	Dec 31, 2013
Deferred tax is calculated on temporary differences under the liability method using a tax rate of 30% in respect of the Malian operations and 25% in respect of the Ivorian operations.			
The movement on deferred taxation is as follows:			
At the beginning of the year		27,164	27,385
Statement of comprehensive income charge/(credit)	4	2,353	(221)
At the end of the year		29,517	27,164
Deferred taxation assets and liabilities comprise the following:			
Decelerated tax depreciation		26,631	25,174
Deferred stripping		3,284	3,284

Deferred taxation liability	29,915	28,458
Accelerated tax depreciation	(398)	(1,294)
Deferred taxation asset	(398)	(1,294)
Net deferred tax liability	29,517	27,164

Temporary differences which are expected to be realized during the Tongon tax holiday are recognized at 0%. There is no deferred tax on other comprehensive income items. There are no unrecognized deferred tax liabilities in respect of undistributed profits.

F-31

12. Available for sale financial assets

\$000	Dec 31,	Dec 31,
	2014	2013
Beginning of year	1,831	3,003
Disposals	-	-

		109,354	174,445

13.1 Refer to note 2 for the Goukoto dividends.

14. Provision for environmental rehabilitation

\$000	Dec 31,	Dec 31,
	2014	2013
Opening balance	49,177	52,575
Unwinding of discount	1,229	1,315
Change in estimates	5,498	(4,713)
At December 31	55,904	49,177

As at December 31, 2014, \$28.2 million of the provision relates to Loulo (December 31, 2013: \$27.5 million). \$21.0 million (2013: \$16.2 million) of the provision relates to Tongon, while \$6.7 million relates to Goukoto (2013: \$5.5 million). The provisions for rehabilitation costs include estimates for the effect of inflation and changes in estimates

and have been discounted to their present value at 2.0% (2013: 2.5%) per annum, being an estimate equivalent to the risk free rate determined with reference to US government bonds with maturity dates comparable to the estimated rehabilitation of the mines. Rehabilitation cash flows are risk adjusted. Limited environmental rehabilitation regulations currently exist in Mali and Côte d'Ivoire to govern the mines, so the directors have based the provisions for environmental rehabilitation on standards set by the World Bank, which require an environmental management plan, an annual environmental report, a closure plan, an up-to-date register of plans of the facility, preservation of public safety on closure, carrying out rehabilitation works and ensuring sufficient funds exist for the closure works. However, it is reasonably possible that the group's estimate of its ultimate rehabilitation liabilities could change as a result of changes in regulations or cost estimates. The group is committed to rehabilitation of its properties. It makes use of independent environmental consultants for advice and it also uses past experience in similar situations to ensure that the provisions for rehabilitation are adequate. Current LoM plans envisage the expected outflow to occur at the end of the LoM which is 2028 for Loulo, 2021 for Tongon and 2025 for Goukoto.

15. Employment cost

The group contributes to several defined contribution provident funds. The provident funds are funded on the 'money accumulative basis' with the members and company having been fixed in the constitutions of the funds. All the group's employees, other than those directly employed by West African subsidiary companies, are entitled to

be covered by the above mentioned retirement benefit plans. Retirement benefits for employees employed by West African subsidiary companies are provided by the state social security system to which the company and employees contribute a fixed percentage of payroll costs each month.

\$000	Dec 31, 2014	Dec 31, 2013	Dec 31, 2012
Total employee benefit cost was as follows:			
Short term benefits	43,855	46,070	38,353
Pension contributions	5,051	5,577	3,949
Share-based payments	24,475	26,282	21,150
Total	73,381	77,929	63,452

Share-based payments

Share options, restricted shares and participation into CIP share awards are granted to directors and employees in exchange for services rendered. These are discussed below.

Share-based payments – share options

The fair value of employee services received as consideration for share options (equity settled) of the company is calculated using the Black-Scholes option pricing model. Options vest after two, three and four years and lapse after a maximum term of ten years. No new options were granted during 2014, 2013 or 2012, therefore no inputs to the option model, etc. are provided for the current year. A reconciliation of the movements in the options during 2013 and 2014 is provided below.

Share Option Scheme

	Number of options outstanding	Weighted average \$
Balance at December 31, 2012	279,927	27.44
Share options exercised during the period	(23,750)	49.88
Share options granted during the period	-	-
Share options lapsed during the period	(10,600)	54.13
Balance at December 31, 2013	245 577	24.13

Share options exercised during the period	(108 300)	18.79
Share options granted during the period	-	-
Share options lapsed during the period	-	-
Balance at December 31, 2014	137 277	28.33

The Randgold Resources Share Option scheme is not constrained by a fixed time period. The aggregate number of shares that may be determined for the option scheme includes all options that have been exercised or are the subject of either terminated or expired options after a 10-year period.

The following table summarizes the information about the options outstanding, including options that are not yet exercisable:

Range of exercise price (\$)	Group Number of options outstanding	Weighted average remaining contractual life (years)	Weighted average exercise price (\$)
At December 31, 2014			
22.19 - 22.19	89,277	2.64	22.19
26.26 - 46.34	32,000	3.79	31.15

56.99 – 56.99	12,000	56.99
	232,927	21.48

Share-based payments – restricted shares and participation in CIP

The company operates restricted share schemes for directors and employees, as well as participation in a CIP for directors and senior management.

F-34

Restricted shares issued to management

Restricted shares issued to management are subject to a satisfactory performance level being achieved during the 12 month period prior to the exercise date of each tranche of shares. The minimum performance level to be achieved is defined as level 3 on the company's performance management system. All employees to whom restricted shares have been granted are expected to meet this level of performance. The performance period is typically up to five years where the employee must remain in employment for the shares to vest. There are no market based vesting conditions on the share awards.

The fair value of the restricted shares issued in 2014, 2013 and 2012 are detailed below and the share-based payment charge is charged to profit evenly between the grant and vesting dates. The restriction on the shares (no dividends received during the vesting period) had a minimal impact on the fair value estimate at the grant date. The restricted shares have an exercise price of nil.

The fair value of the restricted shares issued in 2014 was calculated using the Black-Scholes pricing model. The key assumptions used in this model for shares granted during the year ending December 31, 2014 were as follows:

\$000	Note	January	August	
		2014	2014	
Quantity of shares issued		383,700	113,900	
Fair value of shares issued		\$25.5 million	\$9.5 million	
Performance period		3, 4 and 5 years	3, 4 and 5 years	
Volatility	15.1	37.0%, 34.9% and 37.8%	24.3%, 24.3% and 24.3	%
Risk-free interest rate		0.78%, 1.65% and 1.65%	0.93%, 1.63% and 1.63	%
Dividend yield		0.7	% 0.6	%
Weighted average share price on grant and valuation date	15.2	\$68.4	\$85.86	
Weighted average exercise price		-	-	

15.1 Volatility is based on the three year historical volatility of the company's shares on each grant date.

15.2 Weighted average share price for the valuation is calculated taking into account the market price on all grant dates.

In 2013, there were 458,800 awards: 404,500 awards in January 2013 and 54,300 awards in August 2013. The market price at the award dates was \$93.4 and \$71.3 respectively and vested over three, four and five years in equal tranches.

The volatility, risk free rate and dividend yield had no significant impact on fair value but were consistent with those above. The total fair value of the awards was \$41.2 million over the vesting periods.

In 2012, there were 226,200 awards of restricted shares: 120,000 awards in January 2012 and 106,200 awards in August 2012. The market price at the award dates were \$113.42 and \$90.63 respectively and each vested over there, four and five years in equal tranches. The volatility, risk free rate and dividend yield had no significant impact on fair value but were consistent with those above. The total fair value of the awards was \$22.9 million over the vesting periods.

Restricted shares issued to executive directors in 2009 and 2010

The restricted shares issued to executive directors in 2009 and 2010 were subject to directors remaining employed, as well as being subject to a market performance condition, being the company's relative TSR performance over three years against the HSBC Global Gold Index (since renamed the Euromoney Global Gold Index). This was assessed and had a minimal impact on the fair value estimate at the grant date. The fair value of the restricted shares was based on the share price on the grant date and the share-based payment charge is charged to profit evenly between the grant and vesting dates. The restriction on the shares (no dividends received during the vesting period) had a minimal impact on the fair value estimate at the grant date. The restricted shares have an exercise price of nil. Details of the restricted share awards that vested and lapsed in the year, together with details of the market prices at award and vesting dates are shown below under 'Restricted shares issued to directors and management (excluding CIP).

Restricted share awards granted to executive directors in 2012, 2013 and 2014

The Restricted Share Scheme for 2012 and 2013 operates with conditional share awards, where the awards will vest in three equal one-third tranches subject to the fulfilment of performance conditions measured on an annual basis. Shares awarded in 2014 are subject to one three-year performance period of assessment. If the performance conditions are met, awards vest at the end of each performance period. The 2012 and 2013 awards are subject to four performance conditions: absolute TSR (market based), EPS growth, additional reserves and absolute reserves. The 2014 awards are subject to three performance conditions: absolute TSR (market based), EPS growth and additional reserves. Grant date fair value was calculated using the market-based measure. No dividends are attributable during the vesting period. Details of the restricted share awards that vested and lapsed in the year, together with details of the market prices at award and vesting dates are shown below under 'Restricted shares issued to directors and management (excluding CIP).

The fair value of the restricted shares issued to executive directors in 2014 and 2013 was calculated using a Monte Carlo simulation model. The key assumptions used in this model for shares awarded during the years ending December 31, 2014 and 2013 were as follows:

Group

\$000	Note	March	March
		2014	2013
Quantity of shares committed		49,174	45,125
Fair value		\$2.1 million	\$2.3 million
Performance period	15.1	4 years and a 1 year post vesting retention requirement	3, 4 and 5 years with a 1 year post vesting retention requirement
Risk free interest rate		1.32	0.37%, 0.52% and 0.76%
Volatility	15.2	40	40%
Euromoney Global Gold Index volatility Correlation used between the Euromoney Global Gold Index and the company TSR		34	30%
Weighted average share price on grant and valuation date	15.3	\$79.75	\$82.37

15.1

In 2014, following feedback from shareholders, the performance measurement period has been simplified and now has a measurement period of four years and requires a holding period of one year beyond that performance measurement period for 100% of the vested award.

15.2 *Volatility is based on the three year historical volatility of the company's shares over the relevant vesting periods.*

15.3 *Weighted average share price for the valuation is calculated taking into account the market price on all grant dates.*

Career Share Award – performance shares

At the company's 2013 annual general meeting shareholders approved a one-off award of performance shares to the CEO. 50,031 shares were awarded on April 29, 2013 which vest subject to certain non-market performance conditions as detailed in the "Compensation" section of the Annual Report on Form 20-F. The fair value was determined at \$4.0 million.

At December 31, 2014, four of the five performance conditions had been met by the company. Details of the three performance conditions met in 2014 and the shares attributable are provided in the "Compensation" section of the Annual Report on Form 20-F.

The fulfilment of the first performance condition, the first gold pour at the Kibali gold mine, occurred on September 24, 2013. Accordingly, the performance condition in respect of 10,006 shares was met at a value of \$71.54.

During the year under review, the cumulative production at the Kibali gold mine in aggregate exceeded 500,000oz of gold, the gold production of the Randgold group in aggregate exceeded 1Moz and the Nzoro 2

hydroelectric power station provided electricity to the Kibali gold mine. Accordingly, the performance conditions in respect of 30,018 shares comprising three tranches each of 10,006 shares, was met at a value of \$67.41 per share. These shares will be transferred to the CEO provided the CEO is in office or employment by the company on April 29, 2016.

Restricted shares issued to directors and management (excluding CIP)

Movements in the number of restricted shares outstanding and their issue prices are as follows:

Participation in CIP by executive directors in 2014 and 2013 and 2012

One third of any annual bonus earned is compulsorily deferred and an executive director may also choose to commit further shares into a CIP. The maximum commitment which may be made is 200% of base salary by the CEO and 100% of base salary by the CFO for 2014, 2013 and 2012. Committed shares must be retained for three years and may be matched, depending on relative TSR performance over three years against the Euromoney Global Gold Index. If after three years the TSR performance of the company equals or exceeds the performance of the Euromoney Global Gold Index, then the committed shares may be matched on a stepped scale. Refer to the 'Compensation' section of the annual report for further details. The maximum level of matching is one-for-one. The vesting of the award is dependent on the company's TSR performance relative to the Euromoney Global Gold Index.

The fair value of awards made under the CIP in 2014, 2013 and 2012 was calculated using a Monte Carlo simulation model.

F-37

The key assumptions used in this model for awards made under the CIP during the years ending 30 December 2014, 2013 and 2012 were as follows:

\$000	Note	March 2014	March 2013	March 2012	
Quantity of shares issued		49,174	45,125	33,305	
Fair value of shares issued		\$2 million	\$1.6 million	\$1.9 million	
Performance period		3 years	3 years	3 years	
Risk free interest rate		0.80	% 0.37	% 0.56	%
Volatility	15.1	40	% 40	% 40	%

Participation in CIP by senior management in 2014 and 2013

Senior management had the opportunity to participate in Randgold's Senior Management CIP in 2014 and 2013. The maximum commitment which may be made in the CIP is 100% of base salary. Committed shares must be retained for three years and may be matched, depending on the relative TSR performance over three years against the Euromoney Global Gold Index. If after three years the TSR performance of the company equals or exceeds the performance of the Euromoney Global Gold Index, then the committed shares may be matched on a stepped scale. The maximum level of matching is one-for-one. The vesting of the award is dependent on the company's TSR performance relative to the Euromoney Global Gold Index.

The fair value of awards made under the CIP in 2014 and 2013 was calculated using a Monte Carlo simulation model. The key assumptions used in this model for awards made under the CIP during the years ending December 31, 2014 and 2013 were as follows:

\$000	Note	March 2014	March 2013
Quantity of shares committed		16,354	21,961
Fair value		\$0.7 million	\$0.8 million
Performance period		3 years	3 years
Risk free interest rate		0.80	% 0.37
Volatility	15.1	40	% 40
Euromoney Global Gold Index volatility		34	% 30
Correlation used between the Euromoney Global Gold Index and the company TSR		80	% 80
Weighted average share price on grant and valuation date	15.2	\$79.75	\$81.48

15.1 *Volatility is based on the three year historical volatility of the company's shares over the relevant vesting periods.*

15.2 *Weighted average share price for the valuation is calculated taking into account the market price on all grant dates.*

16. Segmental information

Operating segments have been identified on the basis of internal reports about components of the group that are regularly reviewed by the group's chief operating decision maker. The operating segments included in internal reports are determined on the basis of their significance to the group. In particular, operating mines are reported as separate segments and exploration projects that have significant capitalized expenditure or other fixed assets are also reported separately. The Kibali and Morila joint ventures are included on a line by line basis, reflecting internal reporting. Other parts of the group, including the RAL 1, RAL 2 and KAS joint ventures, are included with corporate and exploration. The group's chief operating decision maker is considered by management to be the board of directors. An analysis of the group's business segments, excluding intergroup transactions, is set out below. Major customers are not identifiable because all gold is sold to an agent.

Country of operation	Mali		Côte d'Ivoire		DRC	Jersey		Sub-total	Joint venture adjustments	Total
	Group's 40% share of Morila	Loulo	Goukoto	Tongon	Group's effective 45% share of Kibali	Corporate and exploration	Inter-company eliminations

Comparative figures excluded transport and refining costs from mine production costs and disclosed these separately, but given its immateriality, it has now been included in mine production costs.

17. Financial risk management

In the normal course of its operations, the group is exposed to gold price, currency, interest rate, liquidity and credit risks. In order to manage these risks, the group may enter into transactions which make use of on-balance sheet derivatives. The group does not acquire, hold or issue derivatives for trading purposes. The group has developed a risk

management process to facilitate, control and monitor these risks. The board has approved and monitors this risk management process, inclusive of documented treasury policies, counterpart limits, controlling and reporting structures.

Controlling risk in the group

The treasury committee is responsible for treasury financial risk management activities within the group. The treasury committee reviews and recommends to the board all treasury counterparties, limits, instruments and any hedge strategies. At least two members of the treasury committee need to be present for a decision to be made, one of whom needs to be an executive director. Unless specific dispensation is obtained from the audit committee, the treasury committee is permitted to invest up to \$50.0 million or 20% of the total funds (whichever is the higher) with each approved institution with an investment rating of AA- or higher noting that no institution can exceed \$100.0 million. The treasury committee is also permitted to invest up to \$12.5 million or 5% of the total funds (whichever is the higher) with each approved institution with an investment rating above A but below AA-, provided that no investment exceeds \$25.0 million. Approximately half of the cash for the group was held with the group's principal bankers at year end with the remainder held with more than 2 other financial institutions as per the treasury policy. The treasury committee is responsible for managing investment, gold price, currency, liquidity and credit risk. The treasury committee monitors adherence to treasury risk management policy and counterparty limits and provides regular reports to the board.

The financial risk management objectives of the group are defined as follows:

Safeguarding the group core earnings stream from its major assets through the effective control and management of gold price risk, foreign exchange risk, interest rate risk and credit risk;

Effective and efficient usage of credit facilities in both the short and long term through the adoption of reliable liquidity management planning and procedures;

- Ensuring that investment and any hedging transactions are undertaken with creditworthy counterparties; and

Ensuring that all contracts and agreements related to risk management activities are coordinated consistently throughout the group and comply where necessary with all relevant regulatory and statutory requirements.

The group continues to hold material TVA receivable balances. While management continue to pursue recovery of the TVA in cash, it is recognized that in practice given the continued absence of payment, the TVA may only be recovered through the tax offset mechanism set out in the mining convention. Management reports the TVA position and movements on a quarterly basis to the audit committee.

Refer to 'Risk Factors' in the Annual Report on Form 20-F for details on the group's risk factors.

Foreign currency and commodity price risk

In the normal course of business, the group enters into transactions denominated in foreign currencies (primarily euro, South African rand and CFA). As a result, the group is subject to exposure from fluctuations in foreign currency exchange rates. In general, the group does not enter into derivatives to manage these currency risks and none existed in 2014 or 2013. Generally, the group does not hedge its exposure to gold price fluctuation risk and gold was sold at market spot prices in 2012, 2013 and 2014. Gold sales are made in US dollars and do not expose the group to any currency fluctuation risk. However, during periods of capital expenditure or loan finance, the company may use forward contracts or options to reduce the exposure to price movements, while maintaining significant exposure to spot prices. These derivatives may establish a fixed price for a portion of future production while the group maintains the ability to benefit from increases in the spot gold price for the majority of future gold production. The group is also exposed to fluctuations in the price of consumables, such as fuel, steel, rubber, cyanide and lime, mainly due to changes in the price of oil, as well as fluctuations in exchange rates.

· South African rand (ZAR)	(1,720)	(8,228)
· British pound (GBP)	(636)	(1,006)

The group's exposure to foreign currency arises where a company holds monetary assets and liabilities denominated in a currency different to the functional currency of the holder of the instrument which is the US dollar. The following table shows the impact of a 10% change in the US dollar on profit and equity arising as a result of the revaluation of the group's foreign currency financial instruments.

	Closing exchange rate	Effect of 10% strengthening of \$ on net earnings and equity \$000
At December 31, 2014

· Communauté Financière Africaine franc (CFA)	476.64	3,485
· South African rand (ZAR)	10.50	331
	0.61	99

The sensitivities are based on financial assets and liabilities held at December 31 where balances were not denominated in the functional currency of the group. The sensitivities do not take into account the group's sales and costs and the results of the sensitivities could change due to other factors such as changes in the value of financial assets and liabilities as a result of non-foreign exchange influenced factors.

Interest rate and liquidity risk

Fluctuations in interest rates impact on the value of short term cash investments and interest payable on financing activities (including long term loans), giving rise to interest rate risk. In the ordinary course of business, the group receives cash from its operations and is required to fund working capital and capital expenditure requirements.

The group generally enters into variable interest bearing borrowings. This cash is managed to ensure surplus funds are invested in a manner to achieve maximum returns while minimizing risks. The group has in the past been able to actively source financing through public offerings, shareholder loans and third party loans.

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

The company entered into a new unsecured revolving credit facility, which doubled the size of facilities available to \$400.0 million, on similar terms to the previous facility and which matures in December 2018 and is at present undrawn. The company drew down and repaid \$50.0 million of the facility in the year. Based on the company's current cash resources and facilities, projected operating cash flows and capital expenditure, the company is confident it will be able to meet its financial obligations at the prevailing gold price.

The facility, if drawn, bears interest at LIBOR plus 1.5%, at the lower end of the leverage grid and includes financial covenants in respect of earnings before interest and tax (EBIT), earnings before interest, tax, depreciation and amortisation (EBITDA), net finance charges, tangible net worth, total debt, debt cover and interest cover.

Maturity date	Group		Effective	
		Amount \$000	rate for the year %	
Cash and cash equivalents:				
All less than 90 days	2014	82,752	0.05	%
	2013	58,494	0.25	%

The other financial instruments of the group that are not included in the tables above are non-interest bearing and are therefore not subject to interest rate risk.

Concentration of credit risk

The group's cash balances do not give rise to a concentration of credit risk because it deals with a variety of major financial institutions. Its receivables and loans are regularly monitored and assessed. Receivables are impaired when it is probable that amounts outstanding are not recoverable as set out in the accounting policy note for receivables. Gold bullion, the group's principal product, is produced in Mali and Côte d'Ivoire (and in the case of its joint ventures in DRC and Mali). The gold produced is sold to the largest accredited gold refinery in the world. Credit risk is further managed by regularly reviewing the financial statements of the refinery. The group is further not exposed to significant credit risk on gold sales, as cash is received within a few days of the sale taking place. While not financial assets for IFRS 7, included in receivables is \$106.8 million (2013: \$129.9 million) (refer to note 7) relating to indirect taxes owing to Loulo, Goukoto and Tongon by the State of Mali, which are denominated in CFA, which holds some credit risk for the group. The legally binding mining conventions in Mali permit offsetting of other corporate taxes against approved unpaid TVA. A further \$50.5 million (2013: \$36.4 million) is held within the underlying statement of financial position of the equity accounted Kibali joint venture which is considered recoverable given the receipts obtained during the year and absence of significant disputed items, albeit receipts, remain slow.

Capital risk management

The group's objectives when managing capital are to safeguard its ability to continue as a going concern in order to provide returns for shareholders and benefits for other stakeholders and to maintain an optimal capital structure to reduce the cost of capital. In order to maintain or adjust the capital structure, the group may adjust the amount of dividends paid to shareholders, buyback shares, return capital to shareholders, issue new shares or sell assets to reduce debt. Consistent with others in the industry, the group monitors capital on the basis of the gearing ratio. This ratio is calculated as net debt (net cash) divided by total capital. Net debt is calculated as total borrowings (including borrowings and trade and other payables, as shown in the consolidated statement of financial position) less cash and cash equivalents. Total capital is calculated as equity, as shown in the consolidated statement of financial position, plus net debt (net cash).

\$000	Dec 31, 2014	Dec 31, 2013
Capital risk management		
Trade and other payables	(109,354)	(174,445)
Less: cash and cash equivalents	82,752	38,151
Net position	(26,602)	(136,294)
Total equity	3,302,954	3,057,854

Total capital	3,329,556	3,194,148	
Gearing ratio	0.8	% 4.3	%

Maturity analysis

The following table analyses the group's financial liabilities into the relevant maturity groupings based on the remaining period from the statement of financial position to the contractual maturity date. As the amounts disclosed in the table are the contractual undiscounted cash flows, these balances will not necessarily correspond with the amounts disclosed in the statement of financial position.

F-44

\$000	Trade and other payables	Borrowings	Other Financial liabilities
At December 31, 2014			
Financial liabilities			
Within 1 year, on demand	82,354	-	
Later than 1 year and no later than 5 years	-	-	
After 5 years	-	-	2,766
Total	82,354	-	2,766
At December 31, 2013			
Financial liabilities			
Within 1 year, on demand	160,942	-	-
Later than 1 year and no later than 5 years	-	-	-
After 5 years	-	-	2,929
Total	160,942	-	2,929

18. Fair value of financial instruments

The following table shows the carrying amounts and fair values of the group's financial instruments outstanding at December 31, 2014 and 2013. The fair value of a financial instrument is defined as the amount at which the instrument could be exchanged in a current transaction between willing parties other than in a forced or liquidation sale.

\$ 000	Carrying amount Dec 31, 2014	Fair value Dec 31, 2014	Carrying amount Dec 31, 2013	Fair value Dec 31, 2013
Categories of financial instruments				
Available -for-sale financial assets categorized as level 1	1,467	1,467	1,831	1,831

The table above shows the level of the fair value valuation hierarchy applied to financial instruments carried at fair value. The total financial assets valued using level 1 is \$1.5 million (2013: \$1.8 million). There have been no transfers between the levels of fair value hierarchy during the current or prior year. Randgold does not hold any financial instruments that are fair valued using a level 2 or level 3 valuation. No derivative financial instruments currently exist. All other financial instrument carrying values approximate fair value.

Estimation of fair values

Trade and other receivables, trade and other payables, cash and cash equivalents

The carrying amounts are a reasonable estimate of the fair values because of the short maturity of such instruments or their interest bearing nature.

Gold price contracts

The group is fully exposed to the spot gold price on gold sales.

F-45

19. Commitments and contingent liabilities

\$000	Dec 31, 2014	Dec 31, 2013
Capital expenditure contracted for at statement of financial position date but not yet incurred is: Property, plant and equipment – subsidiaries	9,573	13,049
Commitments of joint ventures (attributable share)		
Kibali	16,142	16,466
Morila	1,946	396
RAL 1	-	282
	18,088	17,144
Total	27,661	30,193

Under the Kibali Joint Venture Agreement (Kibali JVA), the obligation of the parties (Randgold Resources (Kibali) Ltd and AngloGold Ashanti Holdings plc) in respect of the future funding (including but not limited to operating costs, capital costs and other costs) of the company Kibali Goldmines SA and/or the Kibali project shall be pro-rata in proportion to their respective percentage interests in Kibali at the time any such future funding is required. In accordance with the Kibali JVA, Kibali will be funded via intercompany loans. The approved capital expenditure plan for 2015 is \$280.0 million of which Randgold will contribute 50%. Kibali is now self-funding and is forecasted to continue being self-funded.

Operating lease commitments

The lease relates to the oxygen plant at Loulo leased from Maligaz. The duration of the contract is 10 years and the contract is renewable for additional periods of 5 years thereafter. The future aggregate minimum lease payments¹ under operating leases are as follows:

\$000	Dec. 31, 2014	Dec. 31, 2013
No later than 1 year	3,108	2,817
Later than 1 year and no later than 5 years	12,432	11,268
Later than 5 years	9,324	8,451
	24,864	22,536

¹ These payments also include payments for non-lease elements in the arrangement.

As discussed more fully in note 3 the group has received claims for various taxes in respect of subsidiaries and joint ventures from the State of Mali totaling \$313.0 million (2013: \$123.1 million). The group considers the material

claims to be without merit.

20. Related party transactions

\$000	Year ended Dec 31,2014	Year ended Dec 31, 2013	Year ended Dec 31, 2012
Management fee received from Rockwell Diamonds Inc.	41	42	53
Net income from Loulo	-	-	-
Net income from Tongon	-	-	-
Net income from Morila	5,058	24,729	76,289
Net income from Goukoto	-	-	-
Net income from Kibali	11,475	10,724	6,640
Net income from RAL 1	3,641	4,201	2,571
Net income from RAL 2	364	-	-

Net income refers to interest management fees, recharges and dividends.

In terms of the operator agreement with Morila, a management fee calculated as 1% of the total sales of Morila and is payable to Randgold (through Mining Investment (Jersey) Ltd). Randgold (through Randgold Resources (Somilo) Ltd) is the operator of the Loulo gold mine, the Tongon gold mine (through Mining Investment (Jersey) Ltd) as well as the Goukoto gold mine (through Randgold Resources (Goukoto) Ltd). Seven Bridges Trading 14 (Pty) Ltd provided administration services to Rockwell Diamonds Inc. (Rockwell). Dr. DM Bristow is a

non-executive director of Rockwell. The balances outstanding at year end related to Rockwell were negligible (2013: nil). Refer to note 10 for details of the company's investments in joint ventures within the group together with its relevant share of income and expense.

\$000	Dec 31, 2014	Dec 31, 2013	Dec 31, 2012
Key management remuneration			
Short term employee benefits	12,917	11,983	11,357
Share-based payments	9,966	12,326	12,833
Total	22,883	24,309	24,190

This includes compensation for 2 executive directors (2013: 2; 2012: 2), 7 non-executive directors (2013: 8; 2012:7) and 21 executive management personnel (2013: 19; 2012:21).

21. Mining and processing costs and other disclosable items

\$000	Year ended Dec 31, 2014	Year ended Dec 31, 2013	Year ended Dec 31, 2012
Mine production costs ¹	525,909	538,892	441,049
Movement in production inventory and ore stockpiles	(24,665)	(49,730)	(43,716)
Depreciation and amortization	146,762	130,638	117,991
Other mining and processing costs	64,762	61,319	75,770
	712,768	681,119	591,094

· Other income primarily includes foreign exchange gains and management fees receivable

· Other expenses primarily include foreign exchanges losses

¹ Comparative figures excluded transport and refining costs from mine production costs and disclosed such costs separately. Given its immateriality, it has now been included in mine production costs. Transport and refining costs total \$3.0 million for 2014 (Dec 31, 2013: \$2.7 million; Dec 31, 2012: \$2.7 million) are now included in mine production costs.

22. Exploration and corporate expenditure

\$000	Year ended Dec 31, 2014	Year ended Dec 31, 2013	Year ended Dec 31, 2012
Exploration and corporate expenditure comprise:			
Exploration expenditure	12,762	22,638	16,157
Corporate expenditure	24,003	26,847	22,876
	36,765	49,485	39,033

23. Finance income and cost

\$000	Year ended Dec 31, 2014	Year ended Dec 31, 2013	Year ended Dec 31, 2012
Finance income – interest income	71	1,242	1,857
Finance income – net foreign exchange gain on financing activities	-	-	191
Finance income	71	1,242	2,048
Interest expense – borrowings	(2,965)	(1,373)	(117)
Finance costs – net foreign exchange loss on financing activities	(41)	(5,049)	-
Unwind of discount on provisions for environmental rehabilitation	(1,229)	(1,315)	(867)
Finance costs	(4,235)	(7,737)	(984)
Finance (costs)/income – net	(4,164)	(6,495)	1,064
Interest income arises on cash and cash equivalents.			

Interest expenses arise on borrowings measured at amortized cost.

24. Subsequent events

No significant subsequent events requiring disclosure adjustment occurred.

F-48

REPORT OF THE INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and shareholders of
Kibali (Jersey) Limited

We have audited the accompanying consolidated statements of financial position of Kibali (Jersey) Limited as of December 31, 2014, 2013 and 2012 and the consolidated statements of comprehensive income, consolidated statements of changes in equity, and statements of consolidated cash flows for each of the three years in the period ended December 31, 2014. These financial statements are the responsibility of the company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control over financial reporting. Accordingly, we express no such opinion. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Kibali (Jersey) Limited at December 31, 2014, 2013 and 2012, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2014, in conformity with International Financial Reporting Standards as issued by the International Accounting Standards Board (IASB).

The share premium comprises the excess value recognised from the issue of ordinary shares at par.

RETAINED EARNINGS/(ACCUMULATED LOSSES)

Retained earnings/(accumulated losses) comprises the group's cumulative accounting profits and losses since inception.

OTHER RESERVES

Other reserves comprises the group's cumulative fair value movement on the available for sale financial asset since inception in Kilo Goldmines Limited.

NON-CONTROLLING INTERESTS

The non-controlling interest represents the total carrying value of the 10% interest Société minière de Kilo Moto SARL (SOKIMO) has in Kibali Goldmines SA (Kibali), which is a subsidiary of Kibali (Jersey) Limited.

The accompanying notes form part of these financial statements.

STATEMENTS OF CONSOLIDATED CASH FLOWS**FOR THE YEARS ENDED DECEMBER 31, 2014, 2013 AND 2012**

\$'000	Note	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Cash Flows From Operating Activities				
Cash generated by/(used in) operations	24	329,644	(71,225)	(40,829)
Interest received		1,009	927	182
Finance cost paid		(4 727)	(5,139)	(822)
Dividends received from equity accounted joint venture		150	175	-
Income Tax paid		(1,211)	-	-
Net cash flows generated by/(used in) operating activities		324,865	(75,262)	(41,469)
Cash Flows Related to Investing Activities				
Additions of property, plant and equipment		(407,422)	(748,314)	(521,762)
Funds invested in equity accounted joint venture		-	-	(26,391)
Net cash outflows used in investing activities		(407,422)	(748,314)	(548,153)
Cash Flows Relating to Financing Activities				
Proceeds from issue of ordinary shares		102,924	832,788	596,566
Decrease/(increase) in loans and borrowings		(4,140)	(16,444)	2,833
Net cash inflows provided by financing activities		98,784	816,344	599,399

The accompanying notes form part of these financial statements.

1. STATEMENT OF SIGNIFICANT ACCOUNTING POLICIES

The principal accounting policies applied in the preparation of these consolidated financial statements are set out below. These policies have been consistently applied to all the years presented, unless otherwise stated.

Basis of Preparation

These consolidated financial statements have been prepared in accordance with International Financial Reporting Standards and Interpretations (collectively (IFRS)) issued by the International Accounting Standards Board (IASB).

The consolidated financial statements have been prepared under the historical cost convention, as modified by the revaluation of available-for-sale financial assets. The preparation of financial statements in conformity with IFRS requires the use of certain critical accounting estimates. It also requires management to exercise its judgment in the process of applying the group's accounting policies. The areas involving a high degree of judgment or complexity, or areas where assumptions and estimates are significant to the consolidated financial statements are disclosed in Note 2.

After reviewing the group's and company's budget for the next financial year, and other longer term plans, the directors are satisfied that, at the time of approving the financial statements, it is appropriate to adopt the going concern basis in preparing the financial statements. The directors have no reason to believe that the group and company will not be a going concern in the foreseeable future based on forecasts and available cash resources.

New standards and interpretations applied

The IASB has issued the following new standards, amendments to published standards and interpretations to existing standards with effective dates on or prior to January 1, 2014 which have been adopted by the group for the first time this year.

IFRS as issued by IASB	Impact on group
Effective period commencing on or after	

Edgar Filing: RANDGOLD RESOURCES LTD - Form 20-F

IAS 32	Amendment – offsetting financial assets and financial liabilities	Jan 1, 2014	No material impact
IAS 36	Amendment – recoverable amounts disclosures for non-financial assets	Jan 1, 2014	No material impact
IFRIC 21	Levies	Jan 1, 2014	No material impact

Standards effective in future period

Certain new standards, amendments and interpretations to existing standards have been published that are relevant to the group’s activities and are mandatory for the group’s accounting periods beginning after January 1, 2015 or later periods and which the group has decided not to adopt early. These include:

		Effective period commencing on or after
	Annual improvements to IFRSs 2010-2012 cycle	July 1, 2014
	Annual improvements to IFRSs 2011-2013 cycle	July 1, 2014
IFRS 9	Financial instruments	Jan 1, 2018
IAS 19	Amendment – Defined benefit plans: employee contributions	Jul 1, 2014
IFRS 11	Amendment – Accounting for acquisition of interests in joint operations	Jan 1, 2016
IAS 16 & IAS 38	Amendments – Clarification of acceptable methods of depreciation and amortization	Jan 1, 2016
IFRS 15	Revenue from contracts with customers	Jan 1, 2017
IAS 27	Amendment – Equity method in separate financial statements	Jan 1, 2016
IFRS 10 & IAS 28	Amendment – Sale or contribution of assets between an investor and its associate or joint venture	Jan 1, 2016
IAS 1	Amendment – Disclosure initiative	Jan 1, 2016
	Annual improvements to IFRSs (2012-2014 cycle)	Jan 1, 2016

The group is currently assessing the impact of these standards on the financial statements. At present, no impact is anticipated in respect of the standards and interpretations, given the nature of operations.

CONSOLIDATION

The consolidated financial information includes the financial statements of the company, its subsidiaries and the company's equity interest in joint ventures using uniform accounting policies for like transactions and other events in similar circumstances.

SUBSIDIARIES

Subsidiaries are entities over which the group has the power to govern the financial and operating policies of the entity so as to obtain benefits from the activities and the ability to use its power over the investee to affect the amounts of the group's returns and generally accompanying an interest of more than one-half of the voting rights. Subsidiaries are fully consolidated from the date on which control is transferred to the group. They are deconsolidated from the date on which control ceases. The purchase method of accounting is used to account for the acquisition of subsidiaries by the group. The cost of an acquisition is measured at the fair value of the assets given, equity instruments issued and liabilities incurred or assumed at the date of exchange. Acquisition costs are expensed. Identifiable assets acquired (including mineral property interests) and liabilities and contingent liabilities assumed in a business combination are measured initially at their fair values at the acquisition date, irrespective of the extent of any non-controlling interest. The excess of the cost of acquisition over the fair value of the group's share of the identifiable net assets acquired is recorded as goodwill or other identifiable intangible assets. If the cost of acquisition is less than the fair value of the net assets of the subsidiary acquired, the difference is recognised directly in the statement of comprehensive income.

Inter-company transactions, balances and unrealised gains on transactions between group companies are eliminated. Unrealised losses are also eliminated unless the transaction provides evidence of an impairment of the asset transferred. Accounting policies of subsidiaries have been changed where necessary to ensure consistency with the policies adopted by the group.

JOINT VENTURES

The group holds interests in one joint venture. In a joint venture the parties that have joint control of the arrangement (the joint venturers) have a right to the net assets of the arrangement. This right is accounted for in the consolidated financial statements using the equity method of accounting. Joint control is considered to exist when there is

contractual joint control; control being the power to govern the financial and operating policies of an entity so as to obtain benefits from the activities and the ability to use its power over the investee to affect the amounts of the group's returns by the joint venturers.

Investments in additional joint ventures are initially recognised at cost. The cost of an acquisition is measured at the fair value of the assets given, equity instruments issued or liabilities incurred or assumed at the date of exchange, plus costs directly attributable to the acquisition. Goodwill on associated companies and joint ventures represents the excess of the cost of acquisition of the associate or joint venture over the group's share of the fair value of the identifiable net assets of the associate or joint venture and is included in the carrying amount of the investments.

Joint ventures are accounted for using the equity method of accounting. In applying the equity method of accounting, the group's share of its associated companies and joint ventures' post-acquisition profits or losses are recognised in profit or loss and its share of post-acquisition other comprehensive income is recognised in other comprehensive income. These post-acquisition movements and distributions received from joint venture companies are adjusted against the carrying amount of the investments. When the group's share of losses in an associated or joint venture company equals or exceeds its interest in the associated or joint venture company, including any other unsecured non-current receivables, the group does not recognise further losses, unless it has obligations to make or

F-55

has made payments on behalf of the associated or joint venture company. Unrealised gains on transactions between the group and its associated and joint venture companies are eliminated to the extent of the group's interest in the associated and joint venture companies. Unrealised losses are also eliminated unless the transaction provides evidence of an impairment of the asset transferred. Trading receivables and payables with joint ventures are classified within trade and other receivables and payables. The accounting policies of associated and joint venture companies have been changed where necessary to ensure consistency with the accounting policies adopted by the group.

Dividends received are classified as operating cash flows in the consolidated cash flow statement.

SEGMENTAL REPORTING

An operating segment is a group of assets and operations engaged in performing mining or advanced exploration that are subject to risks and returns that are different from those of other segments. Other parts of the business are aggregated and treated as part of a 'corporate' segment. The group provides segmental information using the same categories of information which the group's chief operating decision maker utilises. The group's chief operating decision maker is considered by management to be the board of directors. The group has only one business segment, being that of gold mining. Segment analysis is based on the mining operations and exploration projects that have a significant amount of capitalised expenditure or other fixed assets.

FOREIGN CURRENCY TRANSLATION

Functional and presentation currency

Items included in the financial statements of each of the group's entities are measured using the currency of the primary economic environment in which the entity operates. The consolidated financial statements are presented in US dollars, which is also the functional currency of the company, its significant subsidiaries and joint ventures.

Transactions and balances

Foreign currency transactions are translated into the relevant functional currency using the exchange rates prevailing at the date of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in the statement of comprehensive income in other income and other expenses.

ROYALTIES

Royalty arrangements based on mineral production are in place at the operating mine. The primary type of royalty is a net smelter return royalty. Under this type of royalty the group pays the host country's government an amount calculated as the royalty percentage multiplied by the value of gold production at market gold prices less selling costs. Royalty expense is recorded when revenue from the sale of gold is recognized.

INTANGIBLE ASSETS

Mineral properties

Mineral properties acquired are recognized at fair value at the acquisition date. Mineral properties are recognized at fair value if acquired as part of a business combination, whereas they are recognized at cost if acquired as an asset. Mineral properties are tested annually for impairment on the same basis that property, plant and equipment are when there is an indication of impairment. Mineral properties are amortized on a units of production basis from the point at which the mine commences production (refer to 'depreciation and amortization' policy below).

PROPERTY, PLANT AND EQUIPMENT

Long-lived assets and mine development costs

Long-lived assets including development costs and mine plant facilities (such as processing plants, tailings facilities, raw water dams and power stations) are initially recorded at cost.

Development of ore bodies includes the development cost of shaft systems and waste rock removal that allows access to reserves that are economically recoverable in the future.

Cost associated with underground development are capitalized when the works provide access to the ore body, whereas costs associated with ore extraction from operating ore body sections are treated as operating costs.

Where relevant the estimated cost of dismantling the asset and remediating the site is included in the cost of property, plant and equipment, subsequently they are measured at cost less accumulated amortization and impairment.

Development costs consist primarily of direct expenditure incurred to establish or expand productive capacity and are capitalized until commercial levels of production are achieved (refer to 'commercial production'), after which the costs are amortized.

Costs are capitalized during the construction of a new mine until commercial levels of production are achieved (refer to 'commercial production' below), after which the relevant costs are amortized. Costs are capitalized provided that the project is considered to be commercially, technically and economically viable. Such viability is deemed to be achieved when the group is confident that the project will provide a satisfactory return relative to its perceived risks and is sufficiently certain of economic production. Costs which are necessarily incurred while commissioning new assets, in the period before they are capable of operating in the manner intended by management, are capitalized under 'Long-lived assets and mine development costs'. Development costs incurred after the commencement of production are capitalized to the extent they are expected to give rise to a future economic benefit.

Commercial production

The group assesses the stage of the mine construction project to determine when a mine moves into the production stage. The criteria used to assess the start date are determined based on the unique nature of the mine construction project. The group considers various relevant criteria to assess when the mine is substantially complete, ready for its intended use, and moves into production stage. Some of the criteria would include but are not limited to the following:

- the level of capital expenditure compared to the construction cost estimates;
- completion of reasonable period of testing of the mine plant and equipment;
- ability to produce gold in saleable form; and
- ability to sustain ongoing commercial levels of gold production.

When a mine construction project moves into the production stage, the capitalisation of certain mine construction costs ceases and costs are either regarded as inventory or expensed, except for capitalizable costs related to mining asset additions or improvements, underground mine development or ore reserve development.

Development expenditure approval

Development activities commence after project sanctioning by the appropriate level of management. Judgment is applied by management in determining when a project has reached a stage at which economically recoverable reserves exists such that development may be sanctioned. In exercising this judgment, management is required to make certain estimates and assumptions similar to those described below for capitalized exploration and evaluation expenditure. Any such estimates and assumptions may change as new information becomes available. If, after having started the development activity, a judgment is made that a development asset is impaired, the appropriate amount will be written off to the statement of comprehensive income.

Stripping costs

In surface mining operations, the group may find it necessary to remove waste materials to gain access to mineral ore deposits prior to and after production commences. This waste removal activity is known as 'stripping'. Prior to production commencing from a pit, stripping costs are measured internally and capitalised until the point where the overburden has been removed and access to the ore commences. Subsequent to production, waste stripping continues, either as part of ore extraction as a run of mine activity or due to strategic decisions such as pit push-back campaigns. There are two benefits accruing to the group from stripping activity during the production phase: usable ore that can be used to produce inventory and improved access to further quantities of material that will be mined in future periods. Economic ore extracted during this period and subsequently is accounted for as inventory. The production stripping costs relating to improved access to further quantities in future periods are capitalised as a stripping activity asset, if and only if, all of the following are met:

it is probable that the future economic benefit (improved access to the ore body) associated with the stripping activity will flow to the group;

- the group can identify the component of the ore body for which access has been improved; and
- the costs relating to the stripping activity associated with that component or components can be measured reliably.

In determining the relevant component of the ore body for which access is improved, the group componentises its mine into geographically distinct ore body sections or phases to which the stripping activities being undertaken within that component are allocated. Such phases are determined based on assessment of factors such as geology and mine planning.

Once determined that any portion of the production stripping costs should be capitalised, the group typically uses the average stripping ratio of the component or phase of the mine to which the production stripping cost related to determine the amount of the production stripping costs that should be capitalised.

The group depreciates the deferred costs capitalised as stripping assets on a unit of production method, with reference the ex-pit ore production from the relevant ore body component or phase.

Short-lived assets

Short-lived assets including non-mining assets are shown at cost less accumulated depreciation and impairment.

Depreciation and amortization

Long-lived assets include mining properties, such as freehold land, metallurgical plant, tailings facilities, raw water dams, power plant and mine infrastructure, as well as mine development costs and are depreciated on a unit of production basis.

Depreciation and amortization are charged over the life of the mine (or over the remaining useful life of the asset, if shorter) based on estimated ore tonnes contained in proven and probable reserves to be extracted using the relevant asset, to reduce the cost to estimated residual values. As an example, the open cast pit is depreciated over proven and probable reserves and tonnes milled from the open cast pit ore body. No future capital expenditure is included in the depreciable value. Proven and probable ore reserves reflect estimated quantities of economically recoverable reserves, which can be recovered in the future from known mineral deposits. Only proven and probable reserves are used in the tonnes milled units of production depreciation calculation. Any changes to the expected life of the mine (or asset) are applied prospectively in calculating depreciation and amortization charges.

Depreciation of construction and development costs for new mines commences when commercial production is achieved, as detailed above. Underground development costs are depreciated from the date the development provides access to operational areas and ore extraction begins from those areas. Other assets under construction, such as plant improvement projects, are depreciated from the date they are commissioned, based on assessment by the group's engineers.

Short-lived assets which include motor vehicles, office equipment and computer equipment are depreciated over estimated useful lives of between two to five years but limited to the remaining mine life. Residual values and useful lives are reviewed, and adjusted if appropriate, at each statement of financial position date. Changes to the estimated residual values or useful lives are accounted for prospectively. Depreciation starts when the assets are ready and available for use.

Impairment

The carrying amount of the property, plant and equipment and investments in joint ventures of the group is compared to the recoverable amount of the assets whenever events or changes in circumstances indicate that the net book value may not be recoverable. The recoverable amount is the higher of value in use and the fair value less cost to sell. In assessing the value in use, the expected future cash flows from the assets is determined by applying a discount rate to the anticipated risk adjusted future cash flows. The discount rate used is derived from the group's weighted average cost of capital adjusted for asset specific factors as applicable. Only proven and probable reserves are used in the calculations and the models used approved mine plans and exclude capital expenditure which enhance the assets or extract tonnes outside of such approved mine plans. An impairment is recognized in the statement of comprehensive income to the extent that the carrying amount exceeds the assets' recoverable amount. The revised carrying amounts are amortized in line with group accounting policies.

A previously recognized impairment loss is reversed if the recoverable amount increases as a result of a reversal of the conditions that originally resulted in the impairment. This reversal is recognized in the statement of comprehensive income and is limited to the carrying amount that would have been determined, net of depreciation, had no impairment loss been recognized in prior years. Assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units) for purposes of assessing impairment. The estimates of future discounted cash flows are subject to risks and uncertainties including the future gold price. It is therefore reasonably possible that changes could occur which may affect the recoverability of property, plant and equipment, and investments in joint ventures.

INVENTORIES

Inventories include ore stockpiles, gold in process and doré, and supplies and spares and are stated at the lower of cost or net realizable value. The cost of ore stockpiles and gold produced is determined principally by the weighted average cost method using related production costs. Costs of stockpiles include costs incurred up to the point of stockpiling, such as mining and grade control costs, but exclude future costs of production.

Costs of stockpiles include costs incurred up to the point of stockpiling, such as mining and grade control costs, but exclude future costs of production. Ore extracted is allocated to separate stockpiles based on estimated grade, with grades below defined cut-off levels treated as waste and expensed. While held in physically separate stockpiles, the group blends the ore from each stockpile at an individual mine when feeding the processing plant to achieve the resultant gold content. In such circumstances, lower and higher grade ore stockpiles each represent a raw material, used in conjunction with each other, to deliver overall gold production, as supported by the relevant feed plan. At Kibali, full grade ore stockpile is above 0.64g/t and no marginal ore is stockpiled while mining oxide material.

The processing of ore in stockpiles occurs in accordance with the life of mine processing plan that has been optimized based on the known mineral reserves, current plant capacity and mine design. Ore tonnes contained in the stockpile which exceeds the annual tonnes to be milled as per the mine plan over the next twelve months, are classified as non-current in the statement of financial position.

Net realizable value of ore stockpiles is determined with reference to estimated contained gold and market gold prices applicable. Ore stockpiles which are blended together or with future ore mined when fed to the plant are assessed as an input to the gold production process to ensure the combined stockpiles are carried at the lower of cost and net realizable value. Ore stockpiles which are not blended in production are assessed separately to ensure they are carried at the lower of cost and net realizable value, although no such stockpiles are currently held.

Costs of gold inventories include all costs incurred up until production of an ounce of gold such as milling costs, mining costs and directly attributable mine general and administration costs but exclude transport costs, refining costs and royalties. Net realizable value is determined with reference to estimated contained gold and market gold prices.

Stores and materials consist of consumable stores and are valued at weighted average cost after appropriate impairment of redundant and slow moving items. Consumable inventory for which the group has substantially all the risks and rewards of ownership are brought onto the statement of financial position as current assets.

INTEREST/BORROWING COSTS

Interest is recognized on a time proportion basis, taking into account the principal outstanding and the effective rate over the period to maturity. Borrowing cost is expensed as incurred except to the extent that it relates directly to the construction of property, plant and equipment during the time that is required to complete and prepare the asset for its intended use, when it is capitalized as part of property, plant and equipment. Borrowing cost is capitalized as part of the cost of the asset where it is probable that the asset will result in economic benefit and where the borrowing cost can be measured reliably. No interest or borrowing costs have been capitalized during the year.

FINANCIAL INSTRUMENTS

Financial instruments are measured as set out below. Financial instruments carried on the statement of financial position include 1) cash and cash equivalents, 2) trade and other receivables, 3) trade and other payables, 4) loans and borrowings and 5) available for sale financial assets.

1) *Cash and cash equivalents*

Cash and cash equivalents are carried in the statement of financial position at cost. For the purpose of the cash flow statement, cash and cash equivalents comprise cash on hand, deposits held at call with banks, other short term highly liquid investments with a maturity of three months or less at the date of purchase and bank overdrafts.

2) *Trade and other receivables*

Trade and other receivables are recognized initially at fair value. There is a rebuttable presumption that the transaction price is fair value unless this could be refuted by reference to market indicators. Subsequently, trade and other receivables are measured at amortized cost using the effective interest method, less provision for impairment. A provision for impairment of trade receivables is established when there is objective evidence that the company will not be able to collect all amounts due according to the original terms of receivables. Significant financial difficulties of the debtor, probability that the debtor will enter bankruptcy or financial reorganization, and default or delinquency in payments are considered indicators that the trade receivable may be impaired. The amount of the provision is the difference between the asset's carrying amount and the present value of estimated future cash flows, discounted at the effective interest rate. The amount of the provision is recognized in mining and processing costs in the statement of comprehensive income.

3) *Trade and other payables*

Accounts payable and other short term monetary liabilities, are initially recognized at fair value, which equates to the transaction price, and subsequently carried at amortized cost using the effective interest method.

4) *Loans and borrowings (including loans from subsidiaries, joint ventures and minorities)*

Borrowings are recognized initially at fair value, net of transaction costs incurred. Borrowings are subsequently stated at amortized cost; any difference between the proceeds (net of transaction costs) and the redemption value is recognized in the statement of comprehensive income over the period of the borrowings using the effective interest method. Borrowings are classified as current liabilities unless the company has an unconditional right to defer settlement of the liability for at least 12 months after the statement of financial position date.

5) *Available-for-sale financial assets*

Available-for-sale financial assets are non-derivatives that are either designated in this category or not classified in any of the other categories. Available-for-sale financial assets are designated on acquisition. They are normally included in current assets and are carried at fair value. Where a decline in the fair value of an available-for-sale financial asset constitutes objective evidence of impairment, the amount of the loss is recognized in the statement of comprehensive income within other expenses, other movements in fair value are recognized in other reserves within other comprehensive income.

REHABILITATION COSTS

The net present value of estimated future rehabilitation costs is provided for in the financial statements and capitalized within property, plant and equipment on initial recognition. Rehabilitation will generally occur on closure or after closure of a mine. Initial recognition is at the time of the construction or disturbance occurring and thereafter as and when additional construction or disturbances take place. The estimates are reviewed annually to take into account the effects of inflation and changes in estimated risk adjusted rehabilitation works cost and are discounted using rates that reflect the time value of money. Annual increases in the provision due to the unwinding of the discount are recognized in the statement of comprehensive income as a finance cost. The present value of additional disturbances and changes in the estimate of the rehabilitation liability are recorded to mining assets against an increase/decrease in the rehabilitation provision. The rehabilitation asset is amortized as noted previously. Rehabilitation projects undertaken, included in the estimates, are charged to the provision as incurred. Environmental liabilities, other than rehabilitation costs, which relate to liabilities arising from specific events, are expensed when they are known, probable and may be reasonably estimated.

PROVISIONS

Provisions are recognized when the company has a present legal or constructive obligation as a result of past events where it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation, and a reliable estimate of the amount of the obligation can be made.

CURRENT TAX

Current tax is the tax expected to be payable on the taxable income for the year calculated using rates (and laws) that have been enacted or substantively enacted by the reporting date. It includes adjustments for tax expected to be payable or recoverable in respect of previous periods.

DEFERRED TAXATION

Deferred tax is provided in full, using the liability method, on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the consolidated financial statements. However, if the temporary difference arises from initial recognition of an asset or liability in a transaction other than a business combination that at the time of the transaction affects neither accounting nor taxable profit nor loss, it is not recognized. Deferred tax is determined using tax rates (and laws) that have been enacted or substantively enacted by the statement of financial position date and are expected to apply when the temporary differences reverses. Deferred tax assets are recognized to the extent that it is probable that future taxable profit will be available against which the temporary differences can be utilized. Deferred tax is provided on temporary differences arising on investments in subsidiaries and joint ventures, except where the timing of the reversal of the temporary difference is controlled by the group and it is probable that the temporary difference will not reverse in the foreseeable future.

SHARE CAPITAL

Ordinary shares are classified as equity. Incremental costs directly attributable to the issue of new shares or options are shown in equity as a deduction from the proceeds.

LEASES

As Lessee

Determining whether an arrangement is, or contains, a lease is based on the substance of the arrangement and requires an assessment of whether fulfillment of the arrangement is dependent on the use of a specific asset or assets and whether the arrangement conveys a right to use the asset. Leases of plant and equipment where the company assumes a significant portion of risks and rewards of ownership are classified as a finance lease. Finance leases are capitalized at the estimated present value of the underlying lease payments. Each lease payment is allocated between the liability and the finance charges to achieve a constant rate on the finance balance outstanding. The interest portion of the finance payment is charged to the statement of comprehensive income over the lease period. The plant and equipment acquired under the finance lease are depreciated over the useful lives of the assets, or over the lease term if shorter. Leases in which a significant portion of the risks and rewards of ownership are retained by the lessor are classified as operating leases.

Payments made under operating leases are charged to the statement of comprehensive income on a straight-line basis over the period of the lease.

As Lessor

Leases in which a significant portion of the risks and rewards of ownership are retained by the lessor are classified as operating leases. Lease income under operating leases is recognized to the statement of comprehensive income on a straight-line basis over the period of the lease.

Where a significant portion of the risks and rewards of ownership are transferred, the group is required to account as though it were acting as a lessor in a finance lease. Hire purchase loans disclosed under receivables represent outstanding amounts due under finance lease arrangements less finance charges allocated to future periods.

REVENUE RECOGNITION

The group enters into contracts for the sale of gold. Revenue arising from gold sales under these contracts is recognized when the price is determinable, the product has been delivered in accordance with the terms of the contract, the significant risks and rewards of ownership have been transferred to the customer and collection of the sales price is reasonably assured. These criteria are met when the gold leaves the mines' smelt houses. As sales from gold contracts are subject to customer survey adjustment, sales are initially recorded on a provisional basis using the group's best estimate of the contained metal. Subsequent adjustments are recorded in revenue to take into account final assay and weight certificates from the refinery, if different from the initial certificates. The differences between the estimated and actual contained gold have historically not been significant.

EXPLORATION AND EVALUATION COSTS

The group expenses all exploration and evaluation expenditures until the directors conclude that a future economic benefit is more likely than not of being realized, i.e. 'probable'. While the criteria for concluding that expenditure should be capitalized is always probable, the information that the directors use to make that determination depends on the level of exploration.

Exploration and evaluation expenditure on brownfield sites, being those adjacent to mineral deposits which are already being mined or developed, is expensed as incurred until the directors are able to demonstrate that future economic benefits are probable through the completion of a prefeasibility study, after which the expenditure is capitalized as a mine development cost. A 'prefeasibility study' consists of a comprehensive study of the viability of a mineral project that has advanced to a stage where the mining method, in the case of underground mining, or the pit configuration, in the case of an open pit, has been established, and which, if an effective method of mineral processing has been determined, includes a financial analysis based on reasonable assumptions of technical, engineering, operating economic factors and the evaluation of other relevant factors. The prefeasibility study, when combined with existing knowledge of the mineral property that is adjacent to mineral deposits that are already being mined or developed, allow the directors to conclude that it is more likely than not that the group will obtain future economic benefit from the expenditures.

Exploration and evaluation expenditure on greenfield sites, being those where the group does not have any mineral deposits which are already being mined or developed, is expensed until such time as the directors have sufficient information to determine that future economic benefits are probable, after which the expenditure is capitalized as a mine development cost. The information required by directors is typically a final feasibility study however a prefeasibility study may be deemed to be sufficient where the additional work required to prepare a final feasibility study is not significant or the work done at prefeasibility level clearly demonstrates and economic asset. Exploration and evaluation expenditure relating to extensions of mineral deposits which are already being mined or developed, including expenditure on the definition of mineralization of such mineral deposits, is capitalized as a mine

development cost following the completion of an economic evaluation equivalent to a prefeasibility study. This economic evaluation is distinguished from a prefeasibility study in that some of the information that would normally be determined in a prefeasibility study is instead obtained from the existing mine or development. This information when combined with existing knowledge of the mineral property already being mined or developed allow the directors to conclude that more likely than not the company will obtain future economic benefit from the expenditures. Costs relating to property acquisitions are capitalized within development costs.

2. KEY ACCOUNTING ESTIMATES AND JUDGMENTS

Some of the accounting policies require the application of significant judgment by management in selecting the appropriate assumptions for calculating financial estimates or determining the appropriate accounting treatment for a transaction.

By their nature, these judgments are subject to an inherent degree of uncertainty and are based on historical experience, terms of existing contracts, management's view on trends in the gold mining industry and information from outside sources.

The estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities are discussed below:

VALUE ADDED TAX

Included in trade and other receivables is a recoverable value added tax (TVA) balance of \$112.2 million (2013: \$81.0 million) (2012: \$47.0 million) (all current) owing by the fiscal authorities in the Democratic Republic of Congo (DRC).

The group continues to seek recovery of TVA in the DRC, in line with the mining code and the carrying value of the receivable has been assessed considering factors such as the level of receipts in the period and to date, relationships and communications with government officials and the tax authority and the limited quantum of disputed submissions. Judgements exist in assessing recovery of these receivables.

CARRYING VALUES OF PROPERTY, PLANT AND EQUIPMENT AND MINERAL PROPERTIES

The group assesses at each reporting period whether there is any indication that these assets may be impaired. If such indication exists, the group estimates the recoverable amount of the asset. The recoverable amount is assessed by reference to the higher of 'value in use' (being the net present value of expected future cash flows of the relevant cash generating unit) and 'fair value less cost to sell'. The estimates used for impairment reviews are based on detailed mine plans and operating plans. Future cash flows are based on estimates of:

the quantities of the proven and probable reserves being reserves for which there is a high degree of confidence in economic extraction;

future production levels;

future commodity prices, including oil forecast at \$100bbl;

future cash cost of production and capital expenditure associated with extraction of the proven and probable reserves in the approved mine plan;

future gold prices – a gold price curve from a leading merchant bank was used for the impairment calculations starting at a \$1,250/oz gold price (2013: \$1,250/oz) and increasing an average of 3%. Beyond the gold curve period provided by the merchant bank, the board has estimated the long-term gold price increasing at 3%; and

a discount rate of 7.3% pre-tax (2013: 9.4%).

A reduction in forward gold prices in excess of 20% is required to give rise to an impairment at the mine. The discount rate would need to increase to 14.1% to give rise to impairment at the mine. However, having considered such scenarios, the directors remain satisfied that no impairment is appropriate. The model is considered suitably conservative with proven and probable reserves determined based on \$1,000/oz gold price (2013: \$1,000/oz).

CAPITALIZATION AND DEPRECIATION

There are several methods for calculating depreciation, i.e. the straight line method, the production method using ounces produced and the production method using tonnes milled. The directors believe that the tonnes milled method is the best indication of plant and infrastructure usage. Refer to note 1 for the depreciation policy. Estimates are required regarding the allocation of assets to relevant proven and probable reserves in the units of production calculations, with assessments involving the group's mining, capital and geology departments. Proven and probable reserves are used in each depreciation calculation, which is considered to be a suitably conservative measure of the future ore extractable using existing assets.

The group applies judgment in allocating costs between operating and capital items. Costs are capitalized when the activity provides access to future ore bodies and are expensed as operating costs when the works involve extraction of ore from operational sections of the ore body.

Additionally, judgment was required when determining the date at which commercial production was achieved and depreciation commenced at Kibali in 2013 and continuing judgment is required in determining the point at which assets under construction at Kibali, such as the sulphide circuit, began commercial production and should be depreciated.

Similarly, given ongoing mine construction and development, judgment was required in allocating costs between operating costs, ore stockpiles and ongoing capital works. Costs have been allocated based on the underlying activity and economic benefits.

GOLD PRICE ASSUMPTIONS

The following gold prices were used in the mineral reserves optimization calculation:

\$/oz	2014	2013	2012
Kibali	1,000	1,000	1,000

Changes in the gold price used could result in changes in the mineral reserve optimization calculations. Mine modelling is a complex process and hence it is not feasible to perform sensitivities on gold price assumptions in respect of ore reserves.

DETERMINATION OF ORE RESERVES

The group estimates its ore reserves and mineral resources based on information compiled by Competent Persons as defined in accordance with the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves of December 2012 (the JORC Code 2012 Edition). Reserves determined in this way are used in the calculation of depreciation, amortization and impairment charges, as well as the assessment of the carrying value of mining assets. There are numerous uncertainties inherent in estimating ore reserves and assumptions that are valid at the time of estimation may change significantly when new information becomes available. Changes in the forecast prices of commodities, exchange rates, production costs or recovery rates may change the economic status of reserves and may, ultimately, result in the reserves being restated.

F-63

FUTURE REHABILITATION OBLIGATIONS

The net present value of current rehabilitation estimates have been discounted to their present value at 2% per annum (2013: 2.5%) (2012: 2.5%) being the prevailing risk free interest rates. Expenditure is expected to be incurred at the end of the mine life. The group undertakes regular assessments by external experts of its mine closure plans, together with assessments by internal staff in the intervening periods, to determine the required rehabilitation works, cost of works and timing of such works. Judgment is required in determining the appropriate costs, timing of costs, discount rates and inflation. For further information, including the carrying amounts of the liabilities, refer to Note 18. A 1% change in the discount rate on the group's rehabilitation estimates would result in an impact of \$1.6 million (2013: \$1.6 million) (2012: \$0.9 million) on the provision for environmental rehabilitation, and an impact of \$0.05 million (2013: \$0.05 million) (2012: nil) on the statement of comprehensive income.

STOCKPILES, GOLD IN PROCESS AND PRODUCT INVENTORIES

Costs that are incurred in or benefit the productive process are accumulated as stockpiles, gold in process and product inventories. Net realizable value tests are performed at least annually and represent the estimated future sales price of the product based on contained gold and metals prices, less estimated costs to complete production and bring the product to sale. Judgment is required in assessing whether stockpiles of different grades should be tested individually, or tested as inputs to the gold production process, as detailed in the group's accounting policy. In the current year, the stockpiles were tested for each individual mine, reflecting the planned blended feed of such stockpiles to the mill on the basis that they are blended together and with future ore mined.

Stockpiles are measured by estimating the number of tonnes added and removed from the stockpile, the number of contained gold ounces based on assay data, and the estimated recovery percentage based on the expected processing method. Stockpile tonnages are verified by periodic surveys.

EXPLORATION AND EVALUATION EXPENDITURE

The group has to apply judgment in determining whether exploration and evaluation expenditure should be capitalized or expensed. Management exercises this judgment based on the results of economic evaluations, prefeasibility or feasibility studies. Costs are capitalized where those studies conclude that more likely than not the group will obtain future economic benefit from the expenditures.

3.**OTHER INCOME**

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
\$000			
From operating activities comprise			
Operation of guest house	24	1,379	286
Net foreign exchange gains	377	1,656	-
	401	3,035	286

F-64

The total other income is not considered to be part of the main revenue generating activities, and as such the group presents this income separately from revenue.

4. MINING AND PROCESSING COSTS

\$000	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Mining and processing costs comprise			
Mine production costs ¹	119,227	22,735	-
Movement in production inventory and ore stockpiles	(10,694)	(10,596)	-

7. INCOME TAXES

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
\$000			
Current taxation	7,715	121	-
Deferred taxation	37,323	(4,860)	-
	45,038	(4,739)	-

The tax on the group's profit before tax differs from the theoretical amount that would arise using the statutory tax rate applicable to the group's operations.

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
\$000			
Profit/(loss) before tax	204,778	52,828	(3,756)
Tax calculated at the DRC effective tax rate of 30%	61,433	15,848	(1,127)
Reconciling items:			
Exempt income	(27,054)	(7,903)	(3,207)
Previous unrecognized losses utilized	-	(9,294)	-
Assessed losses not utilized	-	-	4,334
Net capital allowances not deductible	(6)	(3,511)	-
Other permanent differences	2,950	-	-
Corporate tax at 1/100 from turnover	7,715	121	-
Taxation charges	45,038	(4,739)	-

The group is not subject to income tax in Jersey. In the DRC, the effective tax rate is 30%. The Kibali operations attract corporation tax in the DRC. Kibali is required to pay a minimum of 1/100 (2013: 1/1,000) of the company's revenue which resulted in a minimum corporate tax of \$7.7 million (2013: \$0.1 million). Kibali has capital allowances and non-capital tax losses for deduction against future mining income. Kibali (Jersey) Limited's estimated non-capital tax losses carried forward at December 31, 2014 amounted to \$298.5 million (2013: \$222.1 million) (2012: \$30.9 million) and capital allowances which have been recognized and not utilized carried forward at December 31, 2013 amounted to \$332.4 million (2013: \$217.1 million) (2012: \$6.8 million). Refer to note 10 for deferred taxation.

F-66

8. PROPERTY, PLANT AND EQUIPMENT

\$000	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Mine properties, mine development costs and mine plant facilities and equipment cost			
Cost			
Balance at the beginning of the year	1,584,453	822,297	232,431
Additions	405,304	762,156	589,866
Balance at the end of the year	1,989,757	1,584,453	822,297
Accumulated depreciation			
Balance at the beginning of the year	(30,878)	(11,500)	(4,692)
Depreciation charged for the year	(90,742)	(19,378)	(6,808)
Balance at the end of the year	(121,620)	(30,878)	(11,500)
Net book value	1,868,137	1,553,575	810,797
Short-lived assets			

Long-lived assets and development costs

Included in property, plant and equipment are long-lived assets which are amortized on a units of production basis as detailed in note 2 and include mining properties, such as freehold land, metallurgical plant, tailings facilities, raw water dams, power plant and mine infrastructure, as well as mine development costs. The net book value of these assets was \$1,793 million at December 31, 2014 (2013: \$1,448 million) (2012: \$745 million).

Short-lived assets

Included in property, plant and equipment are short-lived assets which are depreciated over a short life which reflects their likely useful economic life and are comprised of motor vehicles, computer equipment, aircrafts and fixtures and fittings. The net book value of these assets was \$5.7 million at December 31, 2014 (2013: \$3.8 million) (2012: \$3.7 million).

Rehabilitation asset

A rehabilitation asset has been recognized in the period relating to the rehabilitation liability to the value of \$14.0 million (2013: \$8.0 million) (2012: \$4.7 million) (refer to note 18). Depreciation of the rehabilitation asset began on October 1, 2013 when the group commenced commercial production. The asset is depreciated over the life of the mine on a unit of production basis.

Leased assets

The net carrying amount of property, plant and equipment includes the following amount in respect of assets held under finance lease (refer to note 20):

	Dec. 31,	Dec. 31,	Dec. 31,
\$000	2014	2013	2012
Finance Lease Mining Assets	56,146	53,960	56,737

KAS 1 Limited (KAS) is an asset leasing joint venture in which the group has a 50.1% interest. Together with DTP Terrassement SA, the group provides funding to KAS to buy the assets and in return leases the assets under a finance lease to Kibali, a subsidiary of the group. Refer to notes 11, 20, 26 and 27.

9. MINERAL PROPERTIES

\$000	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Cost			
At the beginning and end of the year	745,092	745,092	745,092
Amortization			
At the beginning of the year	(2,164)	-	-
Charge for the year	(48,956)	(2,164)	-
At the end of the year	(51,120)	(2,164)	-
Net book value	693,972	745,928	745,092

Mineral properties represent the fair value attributable to license interest on the acquisition of Moto Goldmines Limited (“Moto”) in 2009. The balance has been amortized over the life of mine on a unit of production basis since the group commenced commercial production on October 1, 2013.

10. DEFERRED TAXATION

\$000	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Deferred taxation is calculated on temporary differences under the liability method using a tax rate of 30% in respect of the DRC operations.			
The movement on deferred taxation is as follows:			
At the beginning of the year	4,860	-	-
Statement of comprehensive income	(37,323)	4,860	-
At the end of the year	(32,463)	4,860	-
Deferred taxation comprise the following:			
Tax losses carried forward attributable to accelerated capital allowances	298,543	222,046	-
Accelerated capital allowances	(332,415)	(217,057)	-
Rehabilitation provision	1,409	(129)	-
Net deferred taxation asset/(liability)	(32,463)	4,860	-

Deferred tax assets are expected to be utilized against future taxable profits arising within the Kibali (Jersey) Limited group following commencement of commercial production in 2013.

11. TRADE AND OTHER RECEIVABLES

	Dec. 31,	Dec. 31,	Dec.
\$000	2014	2013	31,
			2012
Advances to contractors	4,545	24,869	3,821
Trade receivables	11,621	17,006	-
Prepayments and other receivables	31,716	16,567	21,871
Loan to SOKIMO (refer to Note 27)	14,814	13,696	10,619
Other loans	11,140	8,082	-
TVA receivables	112,239	80,961	47,030
Hire purchase loans	14,155	7,083	8,412
	200,230	168,264	91,753
Less: Non-current portion			
Loan to SOKIMO	14,814	13,696	10,619
Other loans	9,151	5,765	-
Hire purchase loans	6,935	3,468	5,319
	30,900	22,929	15,938
Current portion	169,330	145,335	75,815

The fair values of trade and other receivables classified as loans and receivables are approximate to the carrying value.

The classes within trade and other receivables do not contain impaired assets. The credit quality of receivables that are not past due or impaired remains very high. The maximum exposure to credit risk at the reporting date is the fair value of each class of receivable mentioned above. The company does not hold any collateral as security. Refer to note 22 for further information on the concentration of credit risk.

The terms of payment of trade receivables is less than seven days, advances to contractors 30 days and TVA is recoverable over 6 months. The group continues to seek recovery of TVA in line with the mining code. Judgment exists in assessing recovery of this amount.

The loan to SOKIMO bears interest at 8%, the loan and interest and will be repaid through future dividends.

The hire purchase loans bear interest at the aggregate of 10% and the Federal Reserve Rate of 0.75%. These loans are repayable over 3 years.

The balance of “other loans” includes a loan to Randgold Resources Limited of \$0.1 million (2013: US\$0.3 million) (2012: \$0.0 million) and a loan to KGL Isiro SARL of US\$ 2.3 million (2013: \$0.2 million) (2012: \$0.0 million), these loans have no terms of repayment.

All non-current receivables are due after 12 months.

12. INVENTORIES AND ORE STOCKPILES

	Dec. 31,	Dec. 31,	Dec.
\$000	2014	2013	31,
			2012
Consumables stores	48,441	33,024	5,735
Ore stockpiles	77,398	72,492	-
Gold in process	8,487	6,889	-
	134,326	112,405	5,735
Less: Non-current portion			
Ore stockpiles	72,594	-	-
Current portion	61,732	112,405	5,735

All inventory and ore stockpiles are stated at the lower of cost or net realizable value.

Non-current ore stockpiles reflect ore tonnes not planned to be processed within the next 12 months.

13. AVAILABLE FOR SALE FINANCIAL ASSET

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
\$000			
Balance at the beginning of the year	146	945	1,309
Fair value movement recognized in other comprehensive income	(11)	(755)	(393)
Exchange differences	(61)	(44)	29
Balance at the end of the year	74	146	945

14. CASH AND CASH EQUIVALENTS

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
\$000			
Cash at bank and in hand (excluding Bank overdrafts)	20,908	4,681	11,913

15. SHARE CAPITAL AND PREMIUM

The total authorized number of ordinary shares is 10,000 (2013: 10,000) (2012: 10,000) for the total value of \$10,000 (2013: \$10,000) (2012: \$10,000). All issued shares are fully paid. The total number of issued shares at December 31, 2014 was 4,620 shares (2013: 4,428) (2012: 2,890).

Randgold and AngloGold Ashanti Limited (AngloGold Ashanti) are joint venture partners and shareholders of Kibali (Jersey) Limited, having acquired all 4,620 outstanding ordinary shares.

Please refer to the Statement of Changes in Equity on page F-52 of this Annual Report for more detail on the annual movement of share capital and share premium.

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
\$000			
Movement in the number of ordinary shares outstanding:			
Balance at the beginning of the year	4	3	2
Shares issued	1	1	1
Balance at the end of the year	5	4	3

16. NON-CONTROLLING INTEREST

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
\$000			
Balance at the beginning of the year	18,274	14,870	15,197
Non-controlling interest in results of Kibali Goldmines SA	7,248	3,404	(327)
Balance at the end of the year	25,522	18,274	14,870

The non-controlling interest represents the 10% interest SOKIMO has in Kibali, which is a subsidiary of Kibali (Jersey) Limited.

17. LOANS AND BORROWINGS

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
\$000			
Non-current			
Finance lease liability (note 20)	54,917	53,013	53,182
Loan – Randgold (note 27)	216	216	206
Loan – Société des Mines de Tongon SA (note 27)	-	178	-
Loan – Société des Mines de Loulo SA (note 27)	-	23	-
	55,133	53,430	53,388
Current			
Finance lease liability (note 20)	6,023	4,736	5,912
Loan – Randgold	1,976	864	6,383
	7,999	5,600	12,295
Total loans and borrowings	63,132	59,030	65,683

Finance lease liability

The finance lease liability is due to KAS 1 Limited in respect of the equipment which has been transferred to the group under an installment sale agreement. The finance lease liability is interest bearing at 8% and is to be reduced by rental payments monthly as agreed in the installment sale agreement. The finance lease is secured by the leased assets. Refer to note 8.

Loan – Randgold Resources Limited

Randgold, a joint venture partner and operator of the Kibali gold mine, incurs management fees and other expenses as part of its role as operator of the mine on behalf of the Kibali (Jersey) Limited group. The loan bears no interest and is repayable on a monthly basis. The non-current portion bears no interest and is due for repayment in greater than one year.

F-71

18. PROVISION FOR REHABILITATION

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
\$000			
Balance at the beginning of the year	8,210	4,652	-
Unwinding of discount	205	116	-
Change in estimates	6,926	3,442	-
New provision raised	-	-	4,652
Balance at the end of the year	15,341	8,210	4,652

The provision for rehabilitation costs includes estimates for the effect of inflation and changes in estimates and has been discounted to present the value at 2% (2013: 2.5%; 2012: 2.5%) per annum, being an estimate equivalent to the risk free rate determined with reference to US government bonds with maturity dates comparable to the estimated rehabilitation of the mines. The estimated cash costs of rehabilitation are risk adjusted. Management have based the provision for environmental rehabilitation on standards set by the World Bank, which require an environmental management plan, an annual environmental report, a closure plan, an up-to-date register of plans of the facility, preservation of public safety on closure, carrying out rehabilitation works and ensuring sufficient funds exist for the closure works. However, it is reasonably possible that the estimate of its ultimate rehabilitation liability could change as a result of changes in regulations or cost estimates. The group is committed to rehabilitation of its property. It makes use of independent environmental consultants for advice and it also uses past experience in similar situations to ensure that the provision for rehabilitation is adequate. The current LoM plan envisages the expected outflow to occur at the end of the LoM which, at date of accounts, is 2031 for the Kibali gold mine.

19. TRADE AND OTHER PAYABLES

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
\$000			
Trade payables	49,053	13,723	12,439
Payroll and other compensations	2,075	1,734	1,260
Accruals and other payables	60,438	75,669	41,585
	111,566	91,126	55,284

Accruals and other payables include retention amounts in respect of contracts with suppliers of \$18.6 million (2013: \$17.1 million) (2012: \$8.6 million).

Trade and other payables are all due within 120 days.

20. LEASES

The finance lease liability recognized is in respect of mining vehicles which have been used in excavation and hauling of waste rock and ore under an installment sale agreement.

The lease liability is effectively secured as the rights to the leased asset revert to the lessor in the event of default.

\$000	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Gross finance lease liabilities – minimum lease payments:			
No later than 1 year	10,249	9,176	8,486
Later than 1 year and no later than 5 years	40,135	35,968	28,477
Later than 5 years	32,531	36,186	47,862
Future finance charges	(21,975)	(23,581)	(25,731)
Present value of the finance lease liability	60,940	57,749	59,094
Present value of the finance lease liability is as follows:			
No later than 1 year	6,023	4,736	5,912
Later than 1 year and no later than 5 years	26,390	22,399	19,839
Later than 5 years	28,527	30,614	33,343
	60,940	57,749	59,094

21. SEGMENTAL INFORMATION

Operating segments have been identified on the basis of internal reports about components of the group that are regularly reviewed by the group's chief operating decision maker. The operating segments included in the internal reports are determined on the basis of their significance to the group. In particular, the operating mine is reported as a separate segment. KAS 1 Limited joint venture is included within the corporate segment. The group's chief operating decision maker is considered by management to be the board of directors. An analysis of the group's business segments, excluding intergroup transactions, is set out below. Major customers are not identifiable because all gold is sold to an agent.

¹Comparative figures excluded transport and refining costs from mine production costs and disclosed such costs separately. Given its immateriality, it has now been included in mine production costs. Transport and refining costs total \$3.3 million for 2014 (31 Dec 2013: \$0.2 million) are now included in mine production costs.

22. FINANCIAL RISK MANAGEMENT

In the normal course of its operations, the group is exposed to gold price, currency, interest rate, credit and liquidity risks. In order to manage these risks, the group may enter into transactions which make use of on-balance sheet derivatives, but none were entered into in the current year. The group does not acquire, hold or issue derivatives for trading purposes. The group has developed a risk management process to facilitate, control and monitor these risks.

Foreign exchange and commodity price risk

In the normal course of business, the group enters into transactions denominated in foreign currencies (primarily Euro, British pound, South African rand, Communauté Financière Africaine franc and Australian dollar). As a result, the group is subject to exposure from fluctuations in foreign currency exchange rates. In general, the group does not enter into derivatives to manage these currency risks and none existed in 2014, 2013 or 2012. Generally, the group does not hedge its exposure to gold price fluctuation risk and gold was sold at market spot prices in 2014, 2013 and 2012. Gold sales are made in US dollars and do not expose the group to any currency fluctuation risk. The group is also exposed to fluctuations in the price of consumables, such as fuel, steel, rubber, cyanide and lime, mainly due to changes in the price of oil, as well as fluctuations in exchange rates.

\$000	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Level of exposure of foreign currency risk carrying value of foreign currency balances. Cash and cash equivalents includes balances denominated in:			
· Communauté Financière Africaine franc (CFA)	11	71	3
· Euro (EUR)	95	71	410
· South African rand (ZAR)	22	217	166
· British pound (GBP)	3	82	1
· Australian Dollar (AUD)	397	407	464
Trade and other receivables includes balances denominated in:			
· Communauté Financière Africaine franc (CFA)	217	-	37
· Euro (EUR)	340	-	49
· South African rand (ZAR)	50	3,997	5,964
· British pound (GBP)	4	-	74
· Australian Dollar (AUD)	29	34	33
Trade and other payables includes balances denominated in:			
· Euro (EUR)	(840)	(2,628)	(7,343)
· South African rand (ZAR)	(6,080)	(7,486)	(9,042)
· British pound (GBP)	(342)	(125)	(300)
· Australian Dollar (AUD)	(99)	(454)	(856)

The group's exposure to foreign currency arises where a company holds monetary assets and liabilities denominated in a currency different to the functional currency of the holder of the instrument which is the US dollar. The following table shows the impact of a 10% change in the US dollar on profit and equity arising as a result of the revaluation of the group's foreign currency financial instruments. Exposure to CFA and GBP has not been sensitized as their values are immaterial.

	Closing exchange rate	Effect of 10% strengthening of \$ on net earnings and equity	
At December 31, 2014			
· Australian Dollar (AUD)	1.22578	(3)
· Euro (EUR)	0.82262	(376)
· South African rand (ZAR)	11.6017	(703)
At December 31, 2013			
· Australian Dollar (AUD)	1.1260	(1)
· Euro (EUR)	0.7255	(256)
· South African rand (ZAR)	10.466	(327)
At December 31, 2012			
· Australian Dollar (AUD)	0.9642	(36)
· Euro (EUR)	0.7567	(688)
· South African rand (ZAR)	8.4875	(291)

The sensitivities are based on financial assets and liabilities held at December 31, where balances were not denominated in the functional currency of the group. The sensitivities do not take into account the group's income and costs and the results of the sensitivities could change due to other factors such as changes in the value of financial assets and liabilities as a result of non-foreign exchange influenced factors.

Interest rate and liquidity risk

Fluctuations in interest rates impact on the value of short term cash investments and interest payable on financing activities, giving rise to interest rate risk. In the ordinary course of business, the group receives cash funding from their joint venture partners, Randgold and AngloGold Ashanti in the proportion to their respective percentage interests. The group received cash from its operations from the last quarter in 2013, following the commencement of production at the Kibali gold mine. The group is required to fund working capital and capital expenditure requirements with the funding and cash received. The drawdowns of any funds are subject to the approval of the Annual budget and Business plan by the board of directors.

The group has in the past been able to actively source financing through shareholder loans and third party loans. The finance lease entered into bears a fixed rate of interest.

The group is able to actively source financing at competitive rates. The counterparts are financial and banking institutions of good credit standing. The directors believe that the working capital resources, by way of internal sources and banking facilities, are sufficient to the group's currently foreseeable future business requirements.

\$000	Amount	Effective rate for the year %
Cash and cash equivalents:		
All less than 90 days	20,908	0.10

F-76

Concentration of credit risk

The group's cash balances do not give rise to a concentration of credit risk because it deals with a variety of major financial institutions. Its receivables are regularly monitored and assessed. Receivables are impaired when it is probable that amounts outstanding are not recoverable as set out in the accounting policy note for receivables. Gold bullion, the group's principal product, is produced in the DRC. The gold produced is sold to the largest accredited gold refinery in the world. Credit risk is further managed by regularly reviewing the financial statements of the refinery. The group is further not exposed to significant credit risk on gold sales, as cash is received within a few days of the sale taking place. While not a financial asset for IFRS 7, included in receivables is a TVA balance of \$112 million (2013: \$81 million; 2012: \$47 million) (refer to note 11) that was past due but not impaired, given the receipts obtained during the year. This can hold some credit risk for the group.

Capital risk management

The group's objectives when managing capital are to safeguard its ability to continue as a going concern in order to provide future returns for shareholders and benefits for other stakeholders and to maintain an optimal capital structure to reduce the cost of capital. In order to maintain or adjust the capital structure, the group issue new shares (by way of funding from the joint venture partners) or will make use of internal loans. Consistent with others in the industry, the group monitors capital on the basis of the gearing ratio. This ratio is calculated as net debt (net cash) divided by total capital. Net debt is calculated as total borrowings (including borrowings and trade and other payables, as shown in the statement of financial position) less cash and cash equivalents. Total capital is calculated as equity, as shown in the statement of financial position, plus net debt.

(\$000)	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Capital risk management			
Total borrowings (notes 17 and 19)	174,698	150,156	120,967
Less: cash and cash equivalents (note 14)	(20,908)	(4,681)	(11,913)
Net debt	153,790	145,475	109,054
Total equity	2,720,055	2,457,463	1,567,907
Total capital	2,873,845	2,602,938	1,676,961
Gearing ratio	6 %	6 %	7 %

Maturity analysis

The following table analyzes the group's financial liabilities into the relevant maturity groupings based on the remaining period from the Statement of Financial Position to the contractual maturity date.

F-77

	Trade and other payables	Borrowings	Expected Future interest payments
At December 31, 2014			
Financial liabilities			
Within 1 year in demand	111,566	6,023	4,531
Later than 1 year and no later than 5 years	-	26,390	13,325
After 5 years	-	28,527	4,119
Total	111,566	60,940	21,975
At December 31, 2013			
Financial liabilities			
Within 1 year in demand	91,126	5,600	4,440
Later than 1 year and no later than 5 years	-	22,816	13,569
After 5 years	-	30,614	5,572
Total	91,126	59,030	23,581
At December 31, 2012			
Financial liabilities			
Within 1 year in demand	55,284	17,876	2,574
Later than 1 year and no later than 5 years	-	19,839	8,638
After 5 years	-	33,549	14,519
Total	55,284	71,264	25,731

23. FAIR VALUE OF FINANCIAL INSTRUMENTS

The following table shows the carrying amounts and the fair values of the group's financial instruments outstanding at December 31, 2014, 2013 and 2012. The fair value of a financial instrument is defined as the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

	Carrying amount	Fair Value
As at December 31, 2014		
Available for sale financial asset Categorized as level 1¹		
Available for sale financial asset	Available for sale 74	74
As at December 31, 2013		
Available for sale financial asset Categorized as level 1¹		
Available for sale financial asset	Available for sale 146	146
As at December 31, 2012		
Available for sale financial asset Categorized as level 1¹		
Available for sale financial asset	Available for sale 945	945

No derivative financial instruments currently exist.

¹. Level 1: fair values are derived from quoted market prices for identical assets from an active market for which an entity has immediate access.

Estimation of fair values

Trade and other receivables, trade and other payables, cash and cash equivalents, bank overdrafts loans to and from related parties

The carrying amounts are a reasonable estimate of the fair values because of the short maturity of such instruments or their interest bearing nature.

Long-term and short-term borrowings

The carrying amount is a reasonable estimate of the fair value because of the short maturity of such instruments, interest bearing nature, and other terms of the agreement.

24. CASH FLOW FROM OPERATING ACTIVITIES

(\$000)	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Profit/(loss) before income taxation	204,778	52,828	(3,756)
Adjustments for:			
Interest received	(4,349)	(3,966)	(1,448)
Finance cost	4,750	1,136	14
Share of profits of equity accounted joint venture	(155)	(136)	(54)
Depreciation	139,698	21,542	6,808
Capitalized depreciation	-	(6,679)	(4,587)
Unwinding of rehabilitation provision	205	116	-
	344,927	64,841	(3,023)
Effects of changes in operating working capital items			
Receivables	(30,848)	(74,830)	(76,770)
Inventories	(21,920)	(106,670)	(5,023)
Trade and other payables	37,485	45,434	43,987
Cash generated by/(used in) operations	329,644	(71,225)	(40,829)

Non-cash items include a finance lease liability movement of \$3.2 million (2013: \$4.7 million) (2012: \$59.1 million), finance lease assets movement of \$8.2 million (2013: \$4.3 million) (2012: 58.1 million) and changes in rehabilitation provision estimates of \$7.1 million (2013: \$3.4 million) (2012: \$4.7 million).

25. COMMITMENTS AND CONTINGENT LIABILITIES

Capital expenditure contracted for at statement of financial position date but not yet incurred is:

	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Property, plant and equipment	35,872	32,931	241,801

26. INVESTMENT IN JOINT VENTURE

Set out below is the summarized financial information for KAS which is accounted for using the equity method (amounts stated at 100% before intercompany eliminations)

(\$000)	Dec. 31, 2014	Dec. 31, 2013	Dec. 31, 2012
Summarized statement of financial position

SOKIMO has a 10% interest in the company Kibali, a subsidiary of the group.

It is the obligation of the joint venture parties, Randgold and AngloGold Ashanti (ultimate joint venture partners) to fund Kibali for operating costs, capital costs and other costs in proportion to their respective percentage interests in Kibali. These costs are in accordance with the Kibali Joint Venture Agreement.

The finance lease liability due to KAS 1 Limited is in respect of the equipment which has been transferred to the group under an installment sale agreement. Kibali (Jersey) Limited has a 50.1% shareholding in KAS 1 Limited.

Refer to notes 11 and 17 for the details of loans to and from related parties.

F-81

28. SUBSIDIARIES AND TRANSACTIONS WITH NON-CONTROLLING INTERESTS

The consolidated financial statements include the accounts of the company and all of its subsidiaries and jointly controlled entities at December 31, 2014. There has been no change from the prior financial year ended December 31, 2013 (2012: none). The parent company, the principal subsidiaries and their interests are:

		% of interest	Country of incorporation and residence
