(Mark One)

QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the quarterly period ended March 31, 2016

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____

Commission file number: 0-12247

SOUTHSIDE BANCSHARES, INC.

(Exact name of registrant as specified in its charter)

TEXAS

(State or other jurisdiction of incorporation or organization)

75-1848732

(I.R.S. Employer Identification No.)

1201 S. Beckham Avenue, Tyler, Texas

(Address of principal executive offices)

903-531-7111

(Registrant's telephone number, including area code)

75701

(Zip Code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer

Non-accelerated filer

(Do not check if a smaller reporting company)

Accelerated filer

Smaller reporting company

Edgar Filing: SOUTHSIDE BANCSHARES INC - Form 10-Q

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).
Yes No

The number of shares of the issuer's common stock, par value \$1.25, outstanding as of April 25, 2016 was 24,969,676 shares.

SOUTHSIDE BANCSHARES, INC. AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Summary of Significant Accounting and Reporting Policies

Basis of Presentation

In this report, the words “the Company,” “we,” “us,” and “our” refer to the combined entities of Southside Bancshares, Inc. and its subsidiaries. The words “Southside” and “Southside Bancshares” refer to Southside Bancshares, Inc. The words “Southside Bank” and “the Bank” refer to Southside Bank. “Omni” refers to OmniAmerican Bancorp, Inc., a bank holding company acquired by Southside on December 17, 2014. “SFG” refers to SFG Finance, LLC (formerly Southside Financial Group, LLC), which was a wholly-owned subsidiary of the Bank that was dissolved in April 2015.

The consolidated balance sheet as of March 31, 2016, and the related consolidated statements of income, comprehensive income, changes in shareholders’ equity, cash flows and notes to the financial statements for the three-month periods ended March 31, 2016 and 2015 are unaudited; in the opinion of management, all adjustments necessary for a fair statement of such financial statements have been included. Such adjustments consisted only of normal recurring items. All significant intercompany accounts and transactions are eliminated in consolidation. The preparation of these consolidated financial statements in conformity with U.S. generally accepted accounting principles (“GAAP”) requires the use of management’s estimates. These estimates are subjective in nature and involve matters of judgment. Actual amounts could differ from these estimates.

Certain prior period amounts have been reclassified to conform to current year presentation and had no impact on net income, equity or cash flows.

Interim results are not necessarily indicative of results for a full year. These financial statements should be read in conjunction with the financial statements and notes thereto in our Annual Report on Form 10-K for the year ended December 31, 2015.

For a description of our significant accounting and reporting policies, refer to “Note 1- Summary of Significant Accounting and Reporting Policies” in our consolidated financial statements in our Annual Report on Form 10-K for the year ended December 31, 2015. The accounting and reporting policies we follow with respect to our derivative instruments and hedging activities are presented below.

Derivative Financial Instruments and Hedging Activities

Derivative financial instruments are carried on the consolidated balance sheets as other assets or other liabilities, as applicable, at estimated fair value. The accounting for changes in the fair value (i.e., gains or losses) of a derivative financial instrument is determined by whether it has been designated and qualifies as part of a hedging relationship and, further, by the type of hedging relationship. We present derivative financial instruments at fair value in the consolidated balance sheets on a net basis when a right of offset exists, based on transactions with a single counterparty and any cash collateral paid to and/or received from that counterparty for derivative contracts that are subject to legally enforceable master netting arrangements.

For derivative instruments that are designated and qualify as cash flow hedges (i.e., hedging the exposure to variability in expected future cash flows that is attributable to a particular risk), the effective portion of the gain or loss on the derivative instrument is reported as a component of other comprehensive income and reclassified into earnings in the same period or periods during which the hedged transaction affects earnings. The remaining gain or loss on the derivative instrument in excess of the cumulative change in the present value of future cash flows of the hedged item (i.e., the ineffective portion), if any, is recognized in current earnings during the period of change. For derivative instruments not designated as hedging instruments, the gain or loss is recognized in current earnings during the period of change.

For derivatives designated as hedging instruments at inception, statistical regression analysis is used at inception and for each reporting period thereafter to assess whether the derivative used has been and is expected to be highly effective in offsetting changes in the fair value or cash flows of the hedged item. All components of each derivative instrument's gain or loss are included in the assessment of hedge effectiveness. Net hedge ineffectiveness is recorded in "other noninterest income" on the consolidated statements of income.

Further information on our derivative instruments and hedging activities is included in "Note 9 - Derivative Financial Instruments and Hedging Activities."

Table of Contents

Accounting Pronouncements

In February 2016, the FASB issued ASU 2016-02, “Leases (Topic 842).” ASU 2016-02 requires a lessee to recognize assets and liabilities for leases with lease terms of more than 12 months. Consistent with current GAAP, the recognition, measurement, and presentation of expenses and cash flows arising from a lease by a lessee primarily will depend on its classification as a finance or operating lease. However, unlike current GAAP which requires only capital leases to be recognized on the balance sheet, the new ASU will require both types of leases to be recognized on the balance sheet. ASU 2016-02 is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2018. Early adoption is permitted. We have not yet selected a transition method nor have we determined the impact of adoption on our consolidated financial statements.

In March 2016, the FASB issued ASU 2016-09, “Compensation - Stock Compensation (Topic 718): Improvements to Employee Share-Based Payment Accounting.” ASU 2016-09 simplifies several aspects of the accounting for share-based payment transactions, including the income tax consequences, classification of awards as either equity or liabilities, and classification in the statement of cash flows. The ASU requires that all excess tax benefits and tax deficiencies be recognized as income tax expense or benefit in the income statement and should be classified along with other income tax cash flows as an operating activity instead of a financing activity as currently required under GAAP. The ASU also simplifies accounting for forfeitures by allowing an entity to make an entity-wide accounting policy election either to estimate the number of forfeitures expected to occur or to recognize the effects of forfeitures when they occur in compensation cost. Additionally, cash paid by an employer when directly withholding shares for tax-withholding purposes should be classified as a financing activity, and to qualify for equity classification, an employer can now withhold up to the maximum statutory tax rate instead of the minimum statutory tax rate as currently required by GAAP. ASU 2016-09 is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2016. Early adoption is permitted. We have not yet selected a transition method nor have we determined the impact of adoption on our consolidated financial statements.

2. Acquisition

On December 17, 2014, we acquired 100% of the outstanding stock of OmniAmerican Bancorp, Inc. and its wholly-owned subsidiary OmniAmerican Bank (collectively, “Omni”) headquartered in Fort Worth, Texas. Omni operated 14 banking offices in Fort Worth, Texas and surrounding areas. We acquired Omni to further expand our presence in the growing Fort Worth market. The total merger consideration for the Omni merger was \$298.3 million. The operations of Omni were merged into ours as of the date of the acquisition.

The fair value of assets acquired, adjusted for subsequent measurement period adjustments, excluding goodwill, totaled \$1.36 billion, including total loans of \$763.5 million and total investment securities of \$428.4 million. Total fair value of the liabilities assumed, adjusted for subsequent measurement period adjustments, totaled \$1.13 billion, including deposits of \$801.3 million. We recognized \$69.5 million in goodwill associated with the Omni acquisition. The goodwill resulting from the acquisition represents consideration paid in excess of the net assets acquired and the value expected from the opportunities to strategically grow our franchise in the greater Fort Worth market area and to enhance our operations through customer synergies and efficiencies, thereby providing enhanced customer service. Goodwill is not expected to be deductible for tax purposes.

We recognized a core deposit intangible of \$8.6 million in connection with the Omni acquisition, which will be amortized using an accelerated method over a 10 year period consistent with expected future cash flows.

The Omni acquisition was accounted for using the purchase method of accounting and accordingly, purchased assets, including identifiable intangible assets, and assumed liabilities were recorded at their respective acquisition date fair values. For more information concerning the fair value of the assets acquired and liabilities assumed in relation to the acquisition of Omni, see “Note 2 - Acquisition” in our Annual Report on Form 10-K for the year ended December 31, 2015.

The following table reflects our goodwill for the periods presented (in thousands).

March	December
31,	31, 2015

2016

Goodwill \$91,520 \$ 91,520

(1) All mortgage-backed securities issued and/or guaranteed by U.S. government agencies or U.S. government-sponsored enterprises.

From time to time, we may transfer securities from available for sale (“AFS”) to held to maturity (“HTM”) due to overall balance sheet strategies. Our management has the current intent and ability to hold the transferred securities until maturity. Any net unrealized gain or loss on the transferred securities included in accumulated other comprehensive income at the time of transfer will be amortized over the remaining life of the underlying security as an adjustment of the yield on those securities. AFS securities transferred with losses included in accumulated other comprehensive income continue to be included in management’s assessment for other-than-temporary impairment for each individual security. There were no securities transferred from AFS to HTM during the three months ended March 31, 2016.

Table of Contents

We review those securities in an unrealized loss position for significant differences between fair value and the cost basis to evaluate if a classification of other-than-temporary impairment is warranted. In estimating other-than-temporary impairment losses, management considers, among other things, the length of time and the extent to which the fair value has been less than cost and the financial condition and near-term prospects of the issuer. We consider an other-than-temporary impairment to have occurred when there is an adverse change in expected cash flows. When it is determined that a decline in fair value of HTM or AFS securities is other-than-temporary, the carrying value of the security is reduced to its estimated fair value, with a corresponding charge to earnings for the credit portion and the noncredit portion to other comprehensive income. Based upon the length of time and the extent to which fair value is less than cost, we believe that none of the securities with an unrealized loss have other-than-temporary impairment at March 31, 2016.

The majority of the unrealized loss positions are comprised of highly rated municipal securities and U.S. Agency mortgage-backed securities (“MBS”) where the unrealized loss is a direct result of the change in interest rates and spreads. For those securities in an unrealized loss position, we do not currently intend to sell the securities and it is not more likely than not that we will be required to sell the securities before the anticipated recovery of their amortized cost basis. To the best of management’s knowledge and based on our consideration of the qualitative factors associated with each security, there were no securities in our investment and MBS portfolio with an other-than-temporary impairment at March 31, 2016.

Interest income recognized on securities for the periods presented (in thousands):

	Three Months Ended March 31,	
	2016	2015
U.S. Treasury	\$127	\$116

Other Stocks and Bonds	58	52
Other Equity Securities	29	32
Mortgage-backed Securities	9,391	8,462
Total interest income on securities	\$14,960	\$14,564

Of the approximately \$2.4 million in net securities gains from the AFS portfolio for the three months ended March 31, 2016, there were \$2.6 million in realized gains and \$202,000 in realized losses. Of the \$2.5 million in net securities gains from the AFS portfolio for the three months ended March 31, 2015, there were \$2.5 million in realized gains and \$54,000 in realized losses. There were no sales from the HTM portfolio during the three months ended March 31, 2016 or 2015. We calculate realized gains and losses on sales of securities under the specific identification method.

Table of Contents

The amortized cost, carrying value and fair value of securities at March 31, 2016, are presented below by contractual maturity. Expected maturities may differ from contractual maturities because issuers may have the right to call or prepay obligations. MBS are presented in total by category due to the fact that MBS typically are issued with stated principal amounts, and the securities are backed by pools of mortgages that have loans with varying maturities. The characteristics of the underlying pool of mortgages, such as fixed-rate or adjustable-rate, as well as prepayment risk, are passed on to the security holder. The term of a mortgage-backed pass-through security thus approximates the term of the underlying mortgages and can vary significantly due to prepayments.

Investment and MBS with carrying values of \$1.13 billion and \$1.33 billion were pledged as of March 31, 2016 and December 31, 2015, respectively, to collateralize Federal Home Loan Bank of Dallas, ("FHLB") advances, repurchase agreements, and public funds or for other purposes as required by law.

Securities with limited marketability, such as FHLB stock and other investments, are carried at cost, which approximates fair value and are assessed for other-than-temporary impairment. These securities have no maturity date.

Table of Contents

6. Loans and Allowance for Probable Loan Losses

Loans in the accompanying consolidated balance sheets are classified as follows (in thousands):

	March 31, 2016	December 31, 2015
Real Estate Loans:		
Construction	\$464,750	\$ 438,247
1-4 Family Residential	644,826	655,410
Commercial	657,962	635,210
Commercial Loans	233,857	242,527
Municipal Loans	286,217	288,115
Loans to Individuals	155,619	172,244
Total Loans ⁽¹⁾	2,443,231	2,431,753
Less: Allowance for Loan Losses	21,799	19,736
Net Loans	\$2,421,432	\$ 2,412,017

Includes approximately \$525.4 million and \$581.1 million of loans acquired with the Omni acquisition as of (1) March 31, 2016 and December 31, 2015, respectively. The allowance for loan loss recorded on acquired loans totaled \$519,000 and \$629,000 as of March 31, 2016 and December 31, 2015, respectively.

Real Estate Construction Loans

Our construction loans are collateralized by property located primarily in the market areas we serve. A majority of our construction loans will be owner-occupied upon completion. Construction loans for speculative projects are financed, but these typically have secondary sources of repayment and collateral. Our construction loans have both adjustable and fixed interest rates during the construction period. Construction loans to individuals are typically priced and made with the intention of granting the permanent loan on the property. Speculative and commercial construction loans are subject to underwriting standards similar to that of the commercial portfolio. Owner occupied 1-4 family residential construction loans are subject to the underwriting standards of the permanent loan.

Real Estate 1-4 Family Residential Loans

Residential loan originations are generated by our loan officers, in-house origination staff, marketing efforts, present customers, walk-in customers and referrals from real estate agents and builders. We focus our residential lending efforts primarily on the origination of loans secured by first mortgages on owner-occupied, 1-4 family residences. Substantially all of our 1-4 family residential loan originations are secured by properties located in or near our market areas.

Our 1-4 family residential loans generally have maturities ranging from five to 30 years. These loans are typically fully amortizing with monthly payments sufficient to repay the total amount of the loan. Our 1-4 family residential loans are made at both fixed and adjustable interest rates.

Underwriting for 1-4 family residential loans includes debt-to-income analysis, credit history analysis, appraised value and down payment considerations. Changes in the market value of real estate can affect the potential losses in the portfolio.

Commercial Real Estate Loans

Commercial real estate consists of \$582.8 million of commercial real estate loans, \$69.9 million of loans secured by multi-family properties and \$5.3 million of loans secured by farm land. Commercial real estate loans primarily include loans collateralized by commercial office buildings, retail, medical facilities and offices, warehouse facilities, hotels and churches. In determining whether to originate commercial real estate loans, we generally consider such factors as the financial condition of the borrower and the debt service coverage of the property. Commercial real estate loans are made at both fixed and adjustable interest rates for terms generally up to 20 years.

Table of Contents

Commercial Loans

Our commercial loans are diversified loan types including short-term working capital loans for inventory and accounts receivable and short- and medium-term loans for equipment or other business capital expansion. Management does not consider there to be a concentration of risk in any one industry type, other than the medical industry. Loans to borrowers in the medical industry include all loan types listed above for commercial loans. Collateral for these loans varies depending on the type of loan and financial strength of the borrower. The primary source of repayment for loans in the medical community is cash flow from continuing operations.

In our commercial loan underwriting, we assess the creditworthiness, ability to repay, and the value and liquidity of the collateral being offered. Terms of commercial loans are generally commensurate with the useful life of the collateral offered.

Municipal Loans

We have a specific lending department that makes loans to municipalities and school districts primarily throughout the state of Texas. Municipal loans outside the state of Texas have been limited to adjoining states. The majority of the loans to municipalities and school districts have tax or revenue pledges and in some cases are additionally supported by collateral. Municipal loans made without a direct pledge of taxes or revenues are usually made based on some type of collateral that represents an essential service.

Loans to Individuals

Substantially all originations of our loans to individuals are made to consumers in our market areas. The majority of loans to individuals are collateralized by titled equipment, which are primarily automobiles. Loan terms vary according to the type and value of collateral, length of contract and creditworthiness of the borrower. The underwriting standards we employ for consumer loans include an application, a determination of the applicant's payment history on other debts, with the greatest weight being given to payment history with us, and an assessment of the borrower's ability to meet existing obligations and payments on the proposed loan. Although creditworthiness of the applicant is a primary consideration, the underwriting process also includes a comparison of the value of the collateral, if any, in relation to the proposed loan amount. Most of our loans to individuals are collateralized, which management believes should assist in limiting our exposure.

Allowance for Loan Losses

The allowance for loan losses is based on the most current review of the loan portfolio and is a result of multiple processes. First, the bank utilizes historical data to establish general reserve amounts for each class of loans. The historical charge off figure is further adjusted through qualitative factors that include general trends in past dues, nonaccruals and classified loans to more effectively and promptly react to both positive and negative movements. Second, our lenders have the primary responsibility for identifying problem loans based on customer financial stress and underlying collateral. These recommendations are reviewed by senior loan administration, the special assets department, and the loan review department. Third, the loan review department independently reviews the portfolio on an annual basis. The loan review department follows a board-approved annual loan review scope. The loan review scope encompasses a number of considerations including the size of the loan, the type of credit extended, the seasoning of the loan and the performance of the loan. The loan review scope, as it relates to size, focuses more on larger dollar loan relationships, typically aggregate debt of \$500,000 or greater. The loan review officer also reviews specific reserves compared to general reserves to determine trends in comparative reserves as well as losses not reserved for prior to charge-off to determine the effectiveness of the specific reserve process.

At each review, a subjective analysis methodology is used to grade the respective loan. Categories of grading vary in severity from loans that do not appear to have a significant probability of loss at the time of review to loans that indicate a probability that the entire balance of the loan will be uncollectible. If full collection of the loan balance appears unlikely at the time of review, estimates of future expected cash flows or appraisals of the collateral securing the debt are used to determine the necessary allowances. The internal loan review department maintains a list of all loans or loan relationships that are graded as having more than the normal degree of risk associated with them. In addition, a list of specifically reserved loans or loan relationships of \$150,000 or more is updated on a quarterly basis in order to properly determine necessary allowances and keep management informed on the status of attempts to

correct the deficiencies noted with respect to the loan.

We calculate historical loss ratios for pools of loans with similar characteristics based on the proportion of actual charge-offs experienced to the total population of loans in the pool. The historical gross loss ratios are updated based on actual charge-off experience quarterly and adjusted for qualitative factors. Our pools of similar loans include consumer loans and loans secured by 1-4 residential family loans.

Industry and our own experience indicates that a portion of our loans will become delinquent and a portion of the loans will require partial or full charge-off. Regardless of the underwriting criteria utilized, losses may occur as a result of various factors beyond our control, including, among other things, changes in market conditions affecting the value of properties used as collateral for

Table of Contents

loans and problems affecting the credit of the borrower and the ability of the borrower to make payments on the loan. Our determination of the appropriateness of the allowance for loan losses is based on various considerations, including an analysis of the risk characteristics of various classifications of loans, previous loan loss experience, specific loans which would have loan loss potential, delinquency trends, estimated fair value of the underlying collateral, current economic conditions, and geographic and industry loan concentration.

Credit Quality Indicators

We categorize loans into risk categories on an ongoing basis based on relevant information about the ability of borrowers to service their debt such as: current financial information, historical payment experience, credit documentation, public information, and current economic trends, among other factors. We use the following definitions for risk ratings:

Pass (Rating 1 – 4) – This rating is assigned to all satisfactory loans. This category, by definition, consists of acceptable credit. Credit and collateral exceptions should not be present, although their presence would not necessarily prohibit a loan from being rated Pass, if deficiencies are in process of correction. These loans are not included in the Watch List.

Pass Watch (Rating 5) – These loans require some degree of special treatment, but not due to credit quality. This category does not include loans specially mentioned or adversely classified; however, particular attention must be accorded such credits due to characteristics such as:

A lack of, or abnormally extended payment program;

A heavy degree of concentration of collateral without sufficient margin;

A vulnerability to competition through lesser or extensive financial leverage; and

A dependence on a single or few customers or sources of supply and materials without suitable substitutes or alternatives.

Special Mention (Rating 6) – A Special Mention asset has potential weaknesses that deserve management's close attention. If left uncorrected, these potential weaknesses may result in deterioration of the repayment prospects for the asset or in the institution's credit position at some future date. Special Mention assets are not adversely classified and do not expose an institution to sufficient risk to warrant adverse classification.

Substandard (Rating 7) – Substandard loans are inadequately protected by the current sound worth and paying capacity of the obligor or of the collateral pledged, if any. Loans so classified must have a well-defined weakness or weaknesses that jeopardize the liquidation of the debt. They are characterized by the distinct possibility that the Bank will sustain some loss if the deficiencies are not corrected.

Doubtful (Rating 8) – Loans classified as Doubtful have all the weaknesses inherent in those classified Substandard with the added characteristic that the weaknesses make collection or liquidation, in full, on the basis of currently known facts, conditions and values, highly questionable and improbable.

All accruing loans are reserved for as a group of similar type credits and included in the general portion of the allowance for loan losses. Loans to individuals and 1-4 family residential loans, including loans not accruing, are collectively evaluated and included in the general portion of the allowance for loan losses. All loans considered troubled debt restructurings ("TDR") are evaluated individually for further impairment.

The general portion of the loan loss allowance is reflective of historical charge-off levels for similar loans adjusted for changes in current conditions and other relevant factors. These factors are likely to cause estimated losses to differ from historical loss experience and include:

• Changes in lending policies or procedures, including underwriting, collection, charge-off, and recovery procedures;

• Changes in local, regional and national economic and business conditions, including entry into new markets;

• Changes in the volume or type of credit extended;

• Changes in the experience, ability, and depth of lending management;

• Changes in the volume and severity of past due, nonaccrual, restructured, or classified loans;

• Changes in charge-off trends;

• Changes in loan review or Board oversight;

•

Changes in the level of concentrations of
credit; and

Changes in external factors, such as competition and legal and regulatory requirements.

19

Table of Contents

These factors are also considered for the Omni purchased portfolio specifically in regards to changes in past due, nonaccrual and charge-off trends.

Includes PCI loans comprised of \$95,000 special mention and \$3.6 million substandard at both March 31, 2016 and (1)December 31, 2015. Includes PCI loans comprised of \$9.8 million and \$9.9 million doubtful as of March 31, 2016 and December 31, 2015, respectively.

Nonperforming Assets and Past Due Loans

Nonaccrual loans are loans 90 days or more delinquent and collection in full of both the principal and interest is not expected. Additionally, some loans that are not delinquent may be placed on nonaccrual status due to doubts about full collection of principal or interest. When a loan is categorized as nonaccrual, the accrual of interest is discontinued and any accrued balance is reversed for financial statement purposes. Payments received on nonaccrual loans are applied to the outstanding principal balance. Payments of contractual interest are recognized as income only to the extent that full recovery of the principal balance of the loan is reasonably certain. Loans are returned to accrual status when all the principal and interest amounts contractually due are brought current and future payments are reasonably assured. Other factors, such as the value of collateral securing the loan and the financial condition of the borrower, are considered in judgments as to potential loan loss.

Nonaccrual loans and accruing loans past due more than 90 days include both smaller balance homogeneous loans that are collectively evaluated for impairment and individually classified impaired loans.

PCI loans are recorded at fair value at acquisition date. Although the PCI loans may be contractually delinquent, we do not classify these loans as past due or nonperforming as the loans were written down to fair value at the acquisition date and the accretable yield is recognized in interest income over the remaining life of the loan. However, subsequent to acquisition, we re-assess PCI loans for additional impairment and record additional impairment in the event we conclude it is probable that we will be unable to collect all cash flows originally expected to be collected at acquisition plus any additional cash flows expected to be collected due to changes in estimates after acquisition. All such PCI loans for which we recognize subsequent impairment are reported as impaired loans in the financial statements.

Table of Contents

The following table sets forth nonperforming assets for the periods presented (in thousands):

	At March 31, 2016	At December 31, 2015
Nonaccrual loans ⁽¹⁾	\$21,927	\$ 20,526
Accruing loans past due more than 90 days ⁽¹⁾	7	3
Restructured loans ⁽²⁾	11,762	11,143
Other real estate owned	265	744
Reposessed assets	85	64
Total Nonperforming Assets	\$34,046	\$ 32,480

(1) Excludes PCI loans measured at fair value at acquisition.

(2) Includes \$7.4 million and \$7.5 million in PCI loans restructured as of March 31, 2016 and December 31, 2015, respectively.

Foreclosed assets include other real estate owned and reposessed assets. For 1-4 family residential real estate properties, a loan is recognized as a foreclosed property once legal title to the real estate property has been received upon completion of foreclosure or the borrower has conveyed all interest in the residential property through a deed in lieu of foreclosure. There were \$2.9 million and \$67,000 loans secured by 1-4 family residential properties for which formal foreclosure proceedings were in process as of March 31, 2016 and December 31, 2015, respectively.

The following table sets forth the recorded investment in nonaccrual loans by class of loans for the periods presented (in thousands):

	Nonaccrual Loans ⁽¹⁾	
	March 31, 2016	December 31, 2015
Real Estate Loans:		
Construction	\$ 134	\$ 508
1-4 Family Residential	1,410	1,847
Commercial	4,731	2,816
Commercial Loans	14,207	13,896
Loans to Individuals	1,445	1,459
Total	\$21,927	\$ 20,526

(1) Excludes PCI loans measured at fair value at acquisition.

Accruing loans past due more than 90 days were not significant at March 31, 2016 and December 31, 2015. Loans are considered impaired if, based on current information and events, it is probable we will be unable to collect the scheduled payments of principal and interest when due according to the contractual terms of the loan agreement. Impairment is evaluated in total for smaller-balance loans of a similar nature and on an individual loan basis for other loans. The measurement of loss on impaired loans is generally based on the fair value of the collateral if repayment is expected solely from the collateral or the present value of the expected future cash flows discounted at the historical effective interest rate stipulated in the loan agreement. In measuring the fair value of the collateral, in addition to relying on third party appraisals, we use assumptions, such as discount rates, and methodologies, such as

comparison to the recent selling price of similar assets, consistent with those that would be utilized by unrelated third parties performing a valuation. Loans that are evaluated and determined not to meet the definition of an impaired loan are reserved for at the general reserve rate for its appropriate class.

At the time a loss is probable in the collection of contractual amounts, specific reserves are allocated. Loans are charged off to the liquidation value of the collateral net of liquidation costs, if any, when deemed uncollectible or as soon as collection by liquidation is evident.

Loans to Individuals	247	2	462	—
Total	\$30,366	\$ 219	\$14,099	\$ 71

(1) Excludes PCI loans measured at fair value at acquisition that have not experienced further deterioration in credit quality subsequent to the acquisition date.

Table of Contents

Troubled Debt Restructurings

The restructuring of a loan is considered a TDR if both (i) the borrower is experiencing financial difficulties and (ii) the creditor has granted a concession. Concessions may include interest rate reductions or below market interest rates, restructuring amortization schedules and other actions intended to minimize potential losses.

The following tables set forth the recorded balance at March 31, 2016 and 2015 of loans considered to be TDRs that were restructured during the periods presented (dollars in thousands):

	Three Months Ended March 31, 2016				Number of Loans
	Extend Amortization Period	Interest Rate Reductions	Combination (1)	Total Modifications	
Real Estate Loans:					
Construction	\$554	\$	—\$	—\$ 554	1
Commercial	2,118	—	—	2,118	1
Commercial Loans	1,176	—	—	1,176	4
Total	\$3,848	\$	—\$	—\$ 3,848	6

	Three Months Ended March 31, 2015				Number of Loans
	Extend Amortization Period	Interest Rate Reductions	Combination (1)	Total Modifications	
Real Estate Loans:					
1-4 Family Residential	\$—	\$	—\$ 266	\$ 266	2
Commercial	31	—	—	31	1
Commercial Loans	—	—	762	762	1
Loans to Individuals	—	—	27	27	2
Total	\$31	\$	—\$ 1,055	\$ 1,086	6

(1) These modifications may include an extension of the amortization period, interest rate reduction, and/or converting the loan to interest-only for a limited period of time.

Loans restructured as TDRs during the three months ended March 31, 2016 were modified with maturity extensions. Interest continues to be charged on principal balances outstanding during the extended term. Therefore, the financial effects of the recorded investment of loans restructured as TDRs during the three months ended March 31, 2016 and 2015 were not significant. Generally, the loans identified as TDRs were previously reported as impaired loans prior to restructuring and therefore the modification did not impact our determination of the allowance for loan losses.

On an ongoing basis, the performance of the TDRs is monitored for subsequent payment default. Payment default for TDRs is recognized when the borrower is 90 days or more past due. For the three months ended March 31, 2016, there were \$1.4 million of TDRs in default. For the three months ended March 31, 2015, there were no material TDRs in default. Payment defaults for TDRs did not significantly impact the determination of the allowance for loan loss in either period presented.

At March 31, 2016 and 2015, there were no commitments to lend additional funds to borrowers whose terms had been modified in TDRs.

Table of Contents

7. Long-term Obligations

Long-term obligations are summarized as follows (in thousands):

	March 31, 2016	December 31, 2015
FHLB Advances ⁽¹⁾	\$561,990	\$ 502,281
Long-term Debt ⁽²⁾		
Southside Statutory Trust III Due 2033 ⁽³⁾	20,619	20,619
Southside Statutory Trust IV Due 2037 ⁽⁴⁾	23,196	23,196
Southside Statutory Trust V Due 2037 ⁽⁵⁾	12,887	12,887
Magnolia Trust Company I Due 2035 ⁽⁶⁾	3,609	3,609
Total Long-term Debt	60,311	60,311
Total Long-term Obligations	\$622,301	\$ 562,592

(1) At March 31, 2016, the weighted average cost of these advances was 1.17%. Long-term FHLB Advances have maturities ranging from April 2017 through July 2028.

(2) This long-term debt consists of trust preferred securities that qualify under the risk-based capital guidelines as Tier 1 capital, subject to certain limitations.

(3) This debt carries an adjustable rate of 3.57085% through June 29, 2016 and adjusts quarterly at a rate equal to three-month LIBOR plus 294 basis points.

(4) This debt carried an adjustable rate of 1.9156% through April 29, 2016 and adjusts quarterly at a rate equal to three-month LIBOR plus 130 basis points.

(5) This debt carries an adjustable rate of 2.88385% through June 14, 2016 and adjusts quarterly at a rate equal to three-month LIBOR plus 225 basis points.

(6) This debt carries an adjustable rate of 2.4182% through May 22, 2016 and adjusts quarterly at a rate equal to three-month LIBOR plus 180 basis points.

During the fourth quarter of 2015 and continuing into the first quarter of 2016, we entered into various variable rate advance agreements with the FHLB. At March 31, 2016, these agreements were \$190.0 million with rates ranging from one-month LIBOR plus 0.17% to one-month LIBOR plus 0.277%. In addition, we entered into various interest rate swap contracts that are treated as cash flow hedges under ASC 815 that effectively converted the variable rate advances to fixed interest rates ranging from 0.932% to 1.647% and ranging from four years to nine years. The cash flows of the swaps are expected to be effective in hedging the variability in expected future cash flows attributable to fluctuations in the one-month LIBOR interest rate. Proceeds were used for general corporate purposes. Refer to "Note 9 - Derivative Financial Instruments and Hedging Activities" in our consolidated financial statements included in this report for a detailed description of our hedging policy and methodology related to derivative instruments.

Table of Contents

8. Employee Benefit Plans

The components of net periodic benefit cost (income) are as follows (in thousands):

	Three Months Ended March 31,					
	Defined Benefit Pension Plan		Defined Benefit Pension Plan Acquired		Restoration Plan	
	2016	2015	2016	2015	2016	2015
Service cost	\$368	\$476	\$—	\$—	\$47	\$73
Interest cost	917	857	53	59	135	135
Expected return on assets	(1,354)	(1,422)	(67)	(73)	—	—
Net loss amortization	358	383	—	—	53	148
Prior service (credit) cost amortization	(6)	(6)	—	—	2	2
Special and contractual termination benefits	1,520	—	—	—	—	—
Net periodic benefit cost (income)	\$1,803	\$288	\$(14)	\$(14)	\$237	\$358

9. Derivative Financial Instruments and Hedging Activities

Our hedging policy allows the use of interest rate derivative instruments to manage our exposure to interest rate risk or hedge specified assets and liabilities. These instruments may include interest rate swaps and interest rate caps and floors. All derivative instruments are carried on the balance sheet at their estimated fair value and are recorded in other assets or other liabilities, as appropriate.

Derivative instruments may be designated as cash flow hedges of variable rate assets or liabilities, or as forecasted transactions. Derivative instruments designated as cash flow hedges are recorded in accumulated other comprehensive income to the extent they are effective. The amount recorded in other comprehensive income is reclassified to earnings in the same periods as the hedged cash flows impact earnings. The ineffective portion of changes in fair value is reported in current earnings.

During the fourth quarter of 2015 and continuing into the first quarter of 2016, we entered into certain interest rate swap contracts on specific variable-rate advance agreements with the FHLB having a total notional amount of \$190.0 million at March 31, 2016. These interest rate swap contracts were designated as hedging instruments in cash flow hedges under ASC 815. The objective of the interest rate swap contracts is to manage the expected future cash flows on our \$190.0 million of variable-rate advance agreements with the FHLB. The cash flows of the swap are expected to be effective in hedging the variability in expected future cash flows attributable to fluctuations in the one-month LIBOR interest rate.

At March 31, 2016, net derivative liabilities included \$1.7 million of cash collateral paid to the counterparty related to instruments executed with the same counterparty under a master netting agreement.

The notional amounts of the derivative instruments represent the contractual cash flows pertaining to the underlying agreements. These amounts are not exchanged and are not reflected in the consolidated balance sheets. The fair value

of the interest rate swaps are presented at net in other assets and other liabilities when a right of offset exists, based on transactions with a single counterparty that are subject to a legally enforceable master netting agreement.

Table of Contents

The following tables present the notional and estimated fair value amount of derivative positions outstanding for the periods presented (in thousands):

	March 31, 2016			December 31, 2015		
	Estimated Fair Value			Estimated Fair Value		
	Notional Amount (1)	Asset Derivative	Liability Derivative	Notional Amount (1)	Asset Derivative	Liability Derivative
Derivatives designated as hedging instruments						
Interest rate contracts:						
Swaps-Cash Flow Hedge- receive floating/pay fixed	\$190,000	\$ 350	\$ 2,594	\$20,000	\$ —	\$ 1
Gross derivatives		350	2,594		—	1
Offsetting derivative assets/liabilities		(350)	(350)		—	—
Cash collateral received/posted		—	(1,740)		—	—
Net derivatives included in the consolidated balance sheets (2)		\$ —	\$ 504		\$ —	\$ 1

(1) Notional amounts, which represent the extent of involvement in the derivatives market, are used to determine the contractual cash flows required in accordance with the terms of the agreement. These amounts are typically not exchanged, significantly exceed amounts subject to credit or market risk and are not reflected in the consolidated balance sheets.

(2) Net derivative assets are included in “other assets” and net derivative liabilities are included in “other liabilities” on the consolidated balance sheets. Included in the fair value of net derivative assets and net derivative liabilities are credit valuation adjustments reflecting counterparty credit risk and our credit risk. The fair value of net derivative liabilities included credit valuation adjustments for our credit exposure of \$350,000 at March 31, 2016. We had no credit exposure at December 31, 2015.

The summarized expected weighted average remaining maturity of the notional amount of interest rate swaps and the weighted average interest rates associated with the amounts expected to be received or paid on interest rate swap agreements are presented below (in thousands):

	March 31, 2016			December 31, 2015		
	Notional Amount	Weighted Average Remaining Maturity (in years)	Receive Pay Rate (1) Rate	Notional Amount	Weighted Average Remaining Maturity (in years)	Receive Pay Rate (1) Rate
Swaps-Cash Flow Hedge-receive floating/pay fixed						
Medium-and long-term debt designation	\$190,000	5.9	0.44 % 1.36 %	\$20,000	4.9	0.29 % 1.53 %

(1) Variable rates received on pay fixed swaps are based on one-month LIBOR rates in effect at March 31, 2016 and December 31, 2015.

10. Fair Value Measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants. A fair value measurement assumes that the transaction to sell the asset or transfer the liability occurs in the principal market for the asset or liability or, in the absence of a principal market, the most advantageous market for the asset or liability. The price in the principal (or most advantageous) market used to

measure the fair value of the asset or liability is not adjusted for transaction costs. An orderly transaction is a transaction that assumes exposure to the market for a period prior to the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets and liabilities; it is not a forced transaction. Market participants are buyers and sellers in the principal market that are (i) independent, (ii) knowledgeable, (iii) able to transact and (iv) willing to transact.

30

Table of Contents

Valuation techniques including the market approach, the income approach and/or the cost approach are utilized to determine fair value. Inputs to valuation techniques refer to the assumptions that market participants would use in pricing the asset or liability. Valuation policies and procedures are determined by our investment department and reported to our Asset/Liability Committee (“ALCO”) for review. An entity must consider all aspects of nonperforming risk, including the entity’s own credit standing, when measuring fair value of a liability. Inputs may be observable, meaning those that reflect the assumptions market participants would use in pricing the asset or liability developed based on market data obtained from independent sources, or unobservable, meaning those that reflect the reporting entity’s own assumptions about the assumptions market participants would use in pricing the asset or liability developed based on the best information available in the circumstances. A fair value hierarchy for valuation inputs gives the highest priority to quoted prices in active markets for identical assets or liabilities and the lowest priority to unobservable inputs. The fair value hierarchy is as follows:

Level 1 Inputs - Unadjusted quoted prices in active markets for identical assets or liabilities that the reporting entity has the ability to access at the measurement date.

Level 2 Inputs - Inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly or indirectly. These might include quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability (such as interest rates, volatilities, prepayment speeds, credit risks, etc.) or inputs that are derived principally from or corroborated by market data by correlation or other means.

Level 3 Inputs - Unobservable inputs for determining the fair values of assets or liabilities that reflect an entity’s own assumptions about the assumptions that market participants would use in pricing the assets or liabilities.

Level 3 assets recorded at fair value on a nonrecurring basis at March 31, 2016 and December 31, 2015, included loans for which a specific allowance was established based on the fair value of collateral and commercial real estate for which fair value of the properties was less than the cost basis. For both asset classes, the unobservable inputs were the additional adjustments applied by management to the appraised values to reflect such factors as non-current appraisals and revisions to estimated time to sell. These adjustments are determined based on qualitative judgments made by management on a case-by-case basis and are not quantifiable inputs, although they are used in the determination of fair value.

A description of the valuation methodologies used for assets and liabilities measured at fair value, as well as the general classification of such instruments pursuant to the valuation hierarchy, is set forth below.

Certain financial assets are measured at fair value in accordance with GAAP. Adjustments to the fair value of these assets usually result from the application of fair value accounting or write-downs of individual assets. Transfers between levels of the fair value hierarchy are recognized on the actual date of the event or circumstances that caused the transfer, which generally coincides with our monthly and/or quarterly valuation process. There were no transfers between Level 1 and Level 2 during the three months ended March 31, 2016.

Securities Available for Sale – U.S. Treasury securities and other equity securities are reported at fair value utilizing Level 1 inputs. Other securities classified as available for sale are reported at fair value utilizing Level 2 inputs. For these securities, we obtain fair value measurements from independent pricing services. The fair value measurements consider observable data that may include dealer quotes, market spreads, cash flows, the U.S. Treasury yield curve, live trading levels, trade execution data, market consensus prepayment speeds, credit information and the bond’s terms and conditions, among other things.

We review the prices supplied by the independent pricing services for reasonableness and to ensure such prices are aligned with traditional pricing matrices. In addition, we obtain an understanding of their underlying pricing methodologies and their Statement on Standards for Attestation Engagements-Reporting on Controls of a Service

Organization (“SSAE 16”). We validate prices supplied by the independent pricing services by comparison to prices obtained from, in most cases, three additional third party sources. For securities where prices are outside a reasonable range, we further review those securities to determine what a reasonable price estimate is for that security, given available data.

Derivatives – Derivatives are reported at fair value utilizing Level 2 inputs. We obtain fair value measurements from three sources including an independent pricing service and the counterparty to the derivatives. The fair value measurements consider observable data that may include dealer quotes, market spreads, the U.S. Treasury yield curve, live trading levels, trade execution data, credit information and the derivatives’ terms and conditions, among other things. We review the prices supplied by the sources for reasonableness. In addition, we obtain a basic understanding of their underlying pricing methodology. We validate prices supplied by the sources by comparison to one another.

Table of Contents

Certain financial assets and financial liabilities are measured at fair value on a nonrecurring basis, that is, the instruments are not measured at fair value on an ongoing basis but are subject to fair value adjustments in certain circumstances (for example, when there is evidence of impairment). Financial assets and financial liabilities measured at fair value on a nonrecurring basis include the following at March 31, 2016 and December 31, 2015.

Foreclosed Assets – Foreclosed assets are initially recorded at fair value less costs to sell. The fair value measurements of foreclosed assets can include Level 2 measurement inputs such as real estate appraisals and comparable real estate sales information, in conjunction with Level 3 measurement inputs such as cash flow projections, qualitative adjustments, and sales cost estimates. As a result, the categorization of foreclosed assets is Level 3 of the fair value hierarchy. In connection with the measurement and initial recognition of certain foreclosed assets, we may recognize charge-offs through the allowance for loan losses.

Impaired Loans – Certain impaired loans may be reported at the fair value of the underlying collateral if repayment is expected solely from the collateral. Collateral values are estimated using Level 3 inputs based on customized discounting criteria or appraisals. At March 31, 2016 and December 31, 2015, the impact of loans with specific reserves based on the fair value of the collateral was reflected in our allowance for loan losses.

Certain nonfinancial assets and nonfinancial liabilities measured at fair value on a recurring basis include reporting units measured at fair value and tested for goodwill impairment.

The following tables summarize assets measured at fair value on a recurring and nonrecurring basis segregated by the level of the valuation inputs within the fair value hierarchy utilized to measure fair value (in thousands):

	As of March 31, 2016			
		Fair Value Measurements at the End of the Reporting Period Using

(1) All mortgage-backed securities are issued and/or guaranteed by U.S. government agencies or U.S. government-sponsored enterprises.

(2) Impaired loans represent collateral-dependent loans with a specific valuation allowance. Losses on these loans represent charge-offs which are netted against the allowance for loan losses.

Disclosure of fair value information about financial instruments, whether or not recognized in the balance sheet, is required when it is practicable to estimate that value. In cases where quoted market prices are not available, fair values are based on estimates using present value or other estimation techniques. Those techniques are significantly affected by the assumptions used, including the discount rate and estimates of future cash flows. Such techniques and assumptions, as they apply to individual categories of our financial instruments, are as follows:

Cash and cash equivalents - The carrying amount for cash and cash equivalents is a reasonable estimate of those assets' fair value.

Investment and mortgage-backed securities held to maturity - Fair values for these securities are based on quoted market prices, where available. If quoted market prices are not available, fair values are based on quoted market prices for similar securities or estimates from independent pricing services.

FHLB stock and other investments - The carrying amount of FHLB stock and other investments is a reasonable estimate of those assets' fair value.

Loans receivable - For adjustable rate loans that reprice frequently and with no significant change in credit risk, the carrying amounts are a reasonable estimate of those assets' fair value. The fair value of fixed rate loans is estimated by discounting the future cash flows using the current rates at which similar loans would be made to borrowers with similar credit ratings and for the same remaining maturities. Nonperforming loans are estimated using discounted cash flow analyses or the underlying value of the collateral where applicable.

Loans held for sale – The fair value of loans held for sale is determined based on expected proceeds, which are based on sales contracts and commitments.

Deposit liabilities - The fair value of demand deposits, savings accounts, and certain money market deposits is the amount on demand at the reporting date, which is the carrying value. Fair values for fixed rate CDs are estimated using a discounted cash flow calculation that applies interest rates currently being offered for deposits of similar remaining maturities.

Table of Contents

Federal funds purchased and repurchase agreements - Federal funds purchased generally have original terms to maturity of one day and repurchase agreements generally have terms of less than one year, and therefore both are considered short-term borrowings. Consequently, their carrying value is a reasonable estimate of fair value.

FHLB advances - The fair value of these advances is estimated by discounting the future cash flows using rates at which advances would be made to borrowers with similar credit ratings and for the same remaining maturities.

Long-term debt - The carrying amount for the long-term debt is estimated by discounting future cash flows using estimated rates at which long-term debt would be made to borrowers with similar credit ratings and for the remaining maturities.

The following tables present our financial assets, financial liabilities, and unrecognized financial instruments measured on a nonrecurring basis at both their respective carrying amounts and estimated fair value (in thousands):

March 31, 2016	Carrying Amount	Estimated Fair Value			
		Total	Level 1	Level 2	Level 3

Table of Contents

As discussed earlier, the fair value estimate of financial instruments for which quoted market prices are unavailable is dependent upon the assumptions used. Consequently, those estimates cannot be substantiated by comparison to independent markets and, in many cases, could not be realized in immediate settlement of the instruments. Accordingly, the aggregate fair value amounts presented in the above fair value table do not necessarily represent their underlying value.

11. Income Taxes

The income tax expense included in the accompanying statements of income consists of the following (in thousands):

	Three Months Ended March 31,	
	2016	2015
Current income tax expense	\$3,785	\$3,438
Deferred income tax (benefit) expense	(812)	(1,535)
Income tax expense	\$2,973	\$1,903

Net deferred tax assets totaled \$12.5 million at March 31, 2016 and \$19.9 million at December 31, 2015. No valuation allowance for deferred tax assets was recorded at March 31, 2016 or December 31, 2015, as management believes it is more likely than not that all of the deferred tax assets will be realized in future years. Unrecognized tax benefits were not material at March 31, 2016 or December 31, 2015.

We recognized income tax expense of \$3.0 million, for an effective tax rate of 18.0%, for the three months ended March 31, 2016, compared to income tax expense of \$1.9 million, for an effective tax rate of 16.9%, for the three months ended March 31, 2015. The higher effective tax rate for the three months ended March 31, 2016 was due to a decrease in tax-exempt income as a percentage of pre-tax income as compared to the same period in 2015. We file federal income tax returns and certain state tax returns. We are no longer subject to U.S. federal income tax examinations by tax authorities for years before 2012.

Table of Contents

12. Off-Balance-Sheet Arrangements, Commitments and Contingencies

Financial Instruments with Off-Balance-Sheet Risk. In the normal course of business, we are a party to certain financial instruments with off-balance-sheet risk to meet the financing needs of our customers. These off-balance-sheet instruments include commitments to extend credit and standby letters of credit. These instruments involve, to varying degrees, elements of credit and interest rate risk in excess of the amount reflected in the financial statements. The contract or notional amounts of these instruments reflect the extent of involvement and exposure to credit loss that we have in these particular classes of financial instruments.

Commitments to extend credit are agreements to lend to a customer provided that the terms established in the contract are met. Commitments generally have fixed expiration dates and may require the payment of fees. Since some commitments are expected to expire without being drawn upon, the total commitment amounts do not necessarily represent future cash requirements. Standby letters of credit are conditional commitments issued to guarantee the performance of a customer to a third party. These guarantees are primarily issued to support public and private borrowing arrangements. The credit risk involved in issuing letters of credit is essentially the same as that involved in extending loan commitments to customers and similarly do not necessarily represent future cash obligations.

Financial instruments with off-balance-sheet risk were as follows (in thousands):

	At March 31, 2016	At December 31, 2015
Unused commitments:		
Commitments to extend credit	\$ 530,310	\$ 546,660
Standby letters of credit	8,804	7,752
Total	\$ 539,114	\$ 554,412

We apply the same credit policies in making commitments and standby letters of credit as we do for on-balance-sheet instruments. We evaluate each customer's creditworthiness on a case-by-case basis. The amount of collateral obtained, if deemed necessary, upon extension of credit is based on management's credit evaluation of the borrower. Collateral held varies but may include cash or cash equivalents, negotiable instruments, real estate, accounts receivable, inventory, oil, gas and mineral interests, property, plant, and equipment.

Lease Commitments. We lease certain branch facilities and office equipment under operating leases. It is expected that certain leases will be renewed, or equipment replaced with new leased equipment, as these leases expire.

Securities. In the normal course of business we buy and sell securities. There were \$23.9 million and \$19.4 million of unsettled trades to purchase securities at March 31, 2016 and December 31, 2015, respectively. There were \$15.0 million and \$9.3 million of unsettled trades to sell securities as of March 31, 2016 and December 31, 2015, respectively.

Deposits. There were no unsettled issuances of brokered CDs at March 31, 2016 or December 31, 2015.

Litigation. We are involved with various litigation in the normal course of business. Management, after consulting with our legal counsel, believes that any liability resulting from litigation will not have a material effect on our financial position, results of operations or liquidity.

Table of Contents

ITEM 2. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following is a discussion of the consolidated financial condition, changes in financial condition, and results of our operations, and should be read and reviewed in conjunction with the financial statements, and the notes thereto, in this Quarterly Report on Form 10-Q and in our Annual Report on Form 10-K for the year ended December 31, 2015.

Forward-Looking Statements

Certain statements of other than historical fact that are contained in this report may be considered to be “forward-looking statements” within the meaning of and subject to the safe harbor protections of the Private Securities Litigation Reform Act of 1995. These forward-looking statements are not guarantees of future performance, nor should they be relied upon as representing management’s views as of any subsequent date. These statements may include words such as “expect,” “estimate,” “project,” “anticipate,” “appear,” “believe,” “could,” “should,” “may,” “will,” “would,” “intend,” “probability,” “risk,” “goal,” “objective,” “plans,” “potential,” and similar expressions. Forward-looking statements are statements with respect to our beliefs, plans, expectations, objectives, goals, anticipations, assumptions and estimates about our future performance and are subject to significant known and unknown risks and uncertainties, which could cause our actual results to differ materially from the results discussed in the forward-looking statements. For example, discussions about trends in asset quality, capital, liquidity, the pace of loan and revenue growth, expense reductions, the benefits of the Share Repurchase Plan, planned operational efficiencies, earnings and certain market risk disclosures, including the impact of interest rates and other economic factors, are based upon information presently available to management and are dependent on choices about key model characteristics and assumptions and are subject to various limitations. By their nature, certain of the market risk disclosures are only estimates and could be materially different from what actually occurs in the future. Accordingly, our results could materially differ from those that have been estimated. Other factors that could cause actual results to differ materially from those indicated by forward-looking statements include, but are not limited to, the following:

- general economic conditions, either globally, nationally, in the State of Texas, or in the specific markets in which we operate, including, without limitation, the deterioration of the commercial real estate, residential real estate, construction and development, credit and liquidity markets, which could cause an adverse change in our net interest margin, or a decline in the value of our assets, which could result in realized losses;
- current or future legislation, regulatory changes or changes in monetary or fiscal policy that adversely affect the businesses in which we are engaged, including the impact of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (“Dodd-Frank Act”), the Federal Reserve’s actions with respect to interest rates, the capital requirements promulgated by the Basel Committee on Banking Supervision (“Basel Committee”) and other regulatory responses to economic conditions;
- adverse changes in the status or financial condition of the Government-Sponsored Enterprises (the “GSEs”) impacting the GSEs’ guarantees or ability to pay or issue debt;
- adverse changes in the credit portfolio of other U.S. financial institutions relative to the performance of certain of our investment securities;
- economic or other disruptions caused by acts of terrorism in the United States, Europe or other areas;
- changes in the interest rate yield curve such as flat, inverted or steep yield curves, or changes in the interest rate environment that impact interest margins and may impact prepayments on our mortgage-backed securities (“MBS”) portfolio;
- increases in our nonperforming assets;
- our ability to maintain adequate liquidity to fund operations and growth;
- the failure of our assumptions underlying allowance for loan losses and other estimates;
- unexpected outcomes of, and the costs associated with, existing or new litigation involving us;
- changes impacting our balance sheet and leverage strategy;
- risks related to actual U.S. Agency MBS prepayments exceeding projected prepayment levels;
- risks related to U.S. Agency MBS prepayments increasing due to U.S. Government programs designed to assist homeowners to refinance their mortgage that might not otherwise have qualified;

- our ability to monitor interest rate risk;
- risks related to the price per barrel of crude oil;
- significant increases in competition in the banking and financial services industry;
- changes in consumer spending, borrowing and saving habits;

Table of Contents

- technological changes, including potential cyber-security incidents;
- our ability to increase market share and control expenses;
- the effect of changes in federal or state tax laws;
- the effect of compliance with legislation or regulatory changes;
- the effect of changes in accounting policies and practices;
- credit risks of borrowers, including any increase in those risks due to changing economic conditions;
- risks related to loans secured by real estate, including the risk that the value and marketability of collateral could decline; and
- other risks and uncertainties discussed in Part I - “Item 1A. Risk Factors” in our Annual Report on Form 10-K for the year ended December 31, 2015.

All written or oral forward-looking statements made by us or attributable to us are expressly qualified by this cautionary notice. We disclaim any obligation to update any factors or to announce publicly the result of revisions to any of the forward-looking statements included herein to reflect future events or developments, unless otherwise required by law.

Critical Accounting Estimates

Our accounting and reporting estimates conform with U.S. generally accepted accounting principles (“GAAP”) and general practices within the financial services industry. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the amounts reported in the financial statements and accompanying notes. Actual results could differ from those estimates. We consider our critical accounting policies to include the following:

Allowance for Losses on Loans. The allowance for losses on loans represents our best estimate of probable losses inherent in the existing loan portfolio. The allowance for losses on loans is increased by the provision for losses on loans charged to expense and reduced by loans charged-off, net of recoveries. The provision for losses on loans is determined based on our assessment of several factors: reviews and evaluations of specific loans, changes in the nature and volume of the loan portfolio, current economic conditions and the related impact on specific borrowers and industry groups, historical loan loss experience, the level of classified and nonperforming loans and the results of regulatory examinations.

The allowance for loan loss is based on the most current review of the loan portfolio and is a result of multiple processes. The servicing officer has the primary responsibility for updating significant changes in a customer’s financial position. Each officer prepares status updates on any credit deemed to be experiencing repayment difficulties which, in the officer’s opinion, would place the collection of principal or interest in doubt. Our internal loan review department is responsible for an ongoing review of our loan portfolio with specific goals set for the loans to be reviewed on an annual basis.

At each review, a subjective analysis methodology is used to grade the respective loan. Categories of grading vary in severity from loans that do not appear to have a significant probability of loss at the time of review to loans that indicate a probability that the entire balance of the loan will be uncollectible. If full collection of the loan balance appears unlikely at the time of review, estimates of future expected cash flows or appraisals of the collateral securing the debt are used to determine the necessary allowances. The internal loan review department maintains a list of all loans or loan relationships that are graded as having more than the normal degree of risk associated with them. In addition, a list of specifically reserved loans or loan relationships of \$150,000 or more is updated on a quarterly basis in order to properly determine the necessary allowance and keep management informed on the status of attempts to correct the deficiencies noted with respect to the loan.

Loans are considered impaired if, based on current information and events, it is probable that we will be unable to collect the scheduled payments of principal and interest when due according to the contractual terms of the loan agreement. The measurement of loss on impaired loans is generally based on the fair value of the collateral if repayment is expected solely from the collateral or the present value of the expected future cash flows discounted at the historical effective interest rate stipulated in the loan agreement. In measuring the fair value of the collateral, in

addition to relying on third party appraisals, we use assumptions, such as discount rates, and methodologies, such as comparison to the recent selling price of similar assets, consistent with those that would be utilized by unrelated third parties performing a valuation.

Changes in the financial condition of individual borrowers, economic conditions, historical loss experience and the conditions of the various markets in which collateral may be sold all may affect the required level of the allowance for losses on loans and the associated provision for loan losses.

Table of Contents

The allowance for loan losses related to purchase credit impaired (“PCI”) loans is based on an analysis that is performed quarterly to estimate the expected cash flows for each loan deemed PCI. To the extent that the expected cash flows from a PCI loan have decreased since the acquisition date, we establish or increase the allowance for loan losses. For acquired loans that are not deemed credit impaired at acquisition, credit discounts representing the principal losses expected over the life of the loan are a component of the initial fair value. Subsequent to the purchase date, the methods utilized to estimate the required allowance for loan losses for these loans is similar to originated loans. The remaining differences between the purchase price and the unpaid principal balance at the date of acquisition are recorded in interest income over the economic life of the loan.

As of March 31, 2016, our review of the loan portfolio indicated that a loan loss allowance of \$21.8 million was appropriate to cover probable losses in the portfolio.

Refer to “Part II - Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations - Loan Loss Experience and Allowance for Loan Losses” and “Note 6– Loans and Allowance for Probable Loan Losses” in our Annual Report on Form 10-K for the year ended December 31, 2015 for a detailed description of our estimation process and methodology related to the allowance for loan losses.

Estimation of Fair Value. The estimation of fair value is significant to a number of our assets and liabilities. In addition, GAAP requires disclosure of the fair value of financial instruments as a part of the notes to the consolidated financial statements. Fair values for securities are volatile and may be influenced by a number of factors, including market interest rates, prepayment speeds, discount rates and the shape of yield curves. Fair values for most investment and MBS are based on quoted market prices, where available. If quoted market prices are not available, fair values are based on the quoted prices of similar instruments or estimates from independent pricing services. Where there are price variances outside certain ranges from different pricing services for specific securities, those pricing variances are reviewed with other market data to determine which of the price estimates is appropriate for that period.

Impairment of Investment Securities and Mortgage-backed Securities. Investment and MBS classified as available for sale (“AFS”) are carried at fair value and the impact of changes in fair value are recorded on our consolidated balance sheet as an unrealized gain or loss in “Accumulated other comprehensive (loss) income,” a separate component of shareholders’ equity. Securities classified as AFS or held to maturity (“HTM”) are subject to our review to identify when a decline in value is other-than-temporary. When it is determined that a decline in value is other-than-temporary, the carrying value of the security is reduced to its estimated fair value, with a corresponding charge to earnings for the credit portion and to other comprehensive income for the noncredit portion. Factors considered in determining whether a decline in value is other-than-temporary include: (1) whether the decline is substantial, the duration of the decline and the reasons for the decline in value; (2) whether the decline is related to a credit event, a change in interest rate or a change in the market discount rate; (3) the financial condition and near-term prospects of the issuer; and (4) whether we have a current intent to sell the security and whether it is not more likely than not that we will be required to sell the security before the anticipated recovery of its amortized cost basis. For certain assets, we consider expected cash flows of the investment in determining if impairment exists.

Defined Benefit Pension Plan. The plan obligations and related assets of our defined benefit pension plan (the “Plan”) are presented in “Note 11 – Employee Benefits” in our Annual Report on Form 10-K for the year ended December 31, 2015. Entry into the Plan by new employees was frozen effective December 31, 2005. Plan assets, which consist primarily of marketable equity and debt instruments, are valued using observable market quotations. Plan obligations and the annual pension expense are determined by independent actuaries and through the use of a number of assumptions that are reviewed by management. Key assumptions in measuring the Plan obligations include the discount rate, the rate of salary increases and the estimated future return on Plan assets. In determining the discount rate, we utilized a cash flow matching analysis to determine a range of appropriate discount rates for our defined benefit pension and restoration plans. In developing the cash flow matching analysis, we constructed a portfolio of high quality noncallable bonds (rated AA- or better) to match as close as possible the timing of future benefit payments of the Plans at December 31, 2015. Based on this cash flow matching analysis, we were able to determine an appropriate discount rate.

Salary increase assumptions are based upon historical experience and our anticipated future actions. The expected long-term rate of return assumption reflects the average return expected based on the investment strategies and asset allocation on the assets invested to provide for the Plan's liabilities. We considered broad equity and bond indices, long-term return projections, and actual long-term historical Plan performance when evaluating the expected long-term rate of return assumption. At March 31, 2016, the weighted-average actuarial assumptions of the Plan were: a discount rate of 4.56%; a long-term rate of return on Plan assets of 7.25%; and assumed salary increases of 3.50%. Material changes in pension benefit costs may occur in the future due to changes in these assumptions. Future annual amounts could be impacted by changes in the number of Plan participants, changes in the level of benefits provided, changes in the discount rates, changes in the expected long-term rate of return, changes in the level of contributions to the Plan and other factors.

Table of Contents

Non-GAAP Financial Measures

Our accounting and reporting policies conform to generally accepted accounting principles (GAAP) in the United States and prevailing practices in the banking industry. However, certain non-GAAP measures are used by management to supplement the evaluation of our performance. These include the following fully-taxable equivalent measures: tax-equivalent net interest income, tax-equivalent net interest margin, and tax-equivalent net interest spread, which include the effects of taxable-equivalent adjustments using a federal income tax rate of 35% to increase tax-exempt interest income to a tax-equivalent basis. Tax-equivalent adjustments are reported in Notes 2 and 3 to the Average Balances with Average Yields and Rates table under Results of Operations.

Tax-equivalent net interest income, net interest margin and net interest spread. Net interest income on a tax-equivalent basis is a non-GAAP measure that adjusts for the tax-favored status of net interest income from loans and investments. We believe this measure to be the preferred industry measurement of net interest income and it enhances comparability of net interest income arising from taxable and tax-exempt sources. The most directly comparable financial measure calculated in accordance with GAAP is our net interest income. Net interest margin on a tax-equivalent basis is net interest income on a tax-equivalent basis divided by average interest-earning assets on a tax-equivalent basis. The most directly comparable financial measure calculated in accordance with GAAP is our net interest margin. Net interest spread on a tax-equivalent basis is the difference in the average yield on average interest-earning assets on a tax-equivalent basis and the average rate paid on average interest-bearing liabilities. The most directly comparable financial measure calculated in accordance with GAAP is our net interest spread.

These non-GAAP financial measures should not be considered alternatives to GAAP-basis financial statements, and other bank holding companies may define or calculate these non-GAAP measures or similar measures differently.

Off-Balance-Sheet Arrangements, Commitments and Contingencies

Financial Instruments with Off-Balance-Sheet Risk. In the normal course of business, we are a party to certain financial instruments with off-balance-sheet risk to meet the financing needs of our customers. These off-balance-sheet instruments include commitments to extend credit and standby letters of credit. These instruments involve, to varying degrees, elements of credit and interest rate risk in excess of the amount reflected in the financial statements. The contract or notional amounts of these instruments reflect the extent of involvement and exposure to credit loss that we have in these particular classes of financial instruments.

Commitments to extend credit are agreements to lend to a customer provided that the terms established in the contract are met. Commitments generally have fixed expiration dates and may require the payment of fees. Since some commitments are expected to expire without being drawn upon, the total commitment amounts do not necessarily represent future cash requirements. Standby letters of credit are conditional commitments issued to guarantee the performance of a customer to a third party. These guarantees are primarily issued to support public and private borrowing arrangements. The credit risk involved in issuing letters of credit is essentially the same as that involved in extending loan commitments to customers and similarly do not necessarily represent future cash obligations.

Financial instruments with off-balance-sheet risk were as follows (in thousands):

	At March 31, 2016	At December 31, 2015
Unused commitments:		
Commitments to extend credit	\$530,310	\$546,660
Standby letters of credit	8,804	7,752

Total \$539,114 \$554,412

We apply the same credit policies in making commitments and standby letters of credit as we do for on-balance-sheet instruments. We evaluate each customer's creditworthiness on a case-by-case basis. The amount of collateral obtained, if deemed necessary, upon extension of credit is based on management's credit evaluation of the borrower. Collateral held varies but may include cash or cash equivalents, negotiable instruments, real estate, accounts receivable, inventory, oil, gas and mineral interests, property, plant, and equipment.

Lease Commitments. We lease certain branch facilities and office equipment under operating leases. It is expected that certain leases will be renewed, or equipment replaced with new leased equipment, as these leases expire.

Table of Contents

Securities. In the normal course of business we buy and sell securities. There were \$23.9 million and \$19.4 million of unsettled trades to purchase securities at March 31, 2016 and December 31, 2015, respectively. There were \$15.0 million and \$9.3 million unsettled trades to sell securities as of March 31, 2016 and December 31, 2015, respectively.

Deposits. There were no unsettled issuances of brokered CDs at March 31, 2016 or December 31, 2015.

Litigation. We are involved with various litigation in the normal course of business. Management, after consulting with our legal counsel, believes that any liability resulting from litigation will not have a material effect on our financial position, results of operations or liquidity.

OVERVIEW

Operating Results

During the three months ended March 31, 2016, our net income increased \$4.1 million, or 44.1%, to \$13.5 million from \$9.4 million for the same period in 2015. The increase in net income was primarily attributable to an increase in interest income of \$4.4 million, a decrease in the provision for loan losses of \$1.5 million and an increase in noninterest income of \$0.8 million, partially offset by a \$1.6 million increase to interest expense and an increase in income tax expense of \$1.1 million. Earnings per diluted share increased \$0.17, or 45.9%, to \$0.54 for the three months ended March 31, 2016 from \$0.37 for the same period in 2015.

Financial Condition

Our total assets decreased \$143.1 million, or 2.8%, to \$5.02 billion at March 31, 2016 from \$5.16 billion at December 31, 2015 primarily as a result of the decreases in our investment portfolio and mortgage-backed securities ("MBS"). Loans increased \$11.5 million, or 0.5%, to \$2.44 billion compared to \$2.43 billion at December 31, 2015. The increase in our loans was comprised of \$22.8 million of commercial real estate loans and \$26.5 million of construction loans, offset by a decrease of \$8.7 million of commercial loans, \$1.9 million of municipal loans, \$10.6 million of 1-4 family residential loans and \$16.6 million of loans to individuals. Our securities portfolio decreased by \$127.8 million, or 5.7%, to \$2.12 billion, compared to \$2.24 billion at December 31, 2015.

Our nonperforming assets at March 31, 2016 increased to \$34.0 million and represented 0.68% of total assets, compared to \$32.5 million, or 0.63% of total assets at December 31, 2015. Nonaccruing loans increased \$1.4 million to \$21.9 million and the ratio of nonaccruing loans to total loans increased to 0.90% at March 31, 2016 compared to 0.84% at December 31, 2015. Other Real Estate Owned ("OREO") decreased to \$265,000 at March 31, 2016 from \$744,000 at December 31, 2015. Repossessed assets increased to \$85,000 at March 31, 2016 from \$64,000 at December 31, 2015. Restructured loans at March 31, 2016 increased to \$11.8 million compared to \$11.1 million at December 31, 2015.

Our deposits increased \$164.0 million to \$3.62 billion at March 31, 2016 from \$3.46 billion at December 31, 2015. The increase in our deposits during 2016 was primarily the result of an increase in brokered deposits and public fund deposits. For the three months ended March 31, 2016, our non-interest bearing deposits increased \$26.2 million and interest bearing deposits increased \$137.7 million. Total FHLB advances decreased \$328.6 million to \$819.1 million at March 31, 2016 from \$1.15 billion at December 31, 2015. Short-term FHLB advances decreased \$388.3 million to \$257.1 million at March 31, 2016 from \$645.4 million at December 31, 2015. Long-term FHLB advances increased \$59.7 million to \$562.0 million at March 31, 2016 from \$502.3 million at December 31, 2015.

Shareholders' equity at March 31, 2016 totaled \$457.6 million compared to \$444.1 million at December 31, 2015. The increase was primarily the result of net income of \$13.5 million recorded for the three months ended March 31, 2016, a decrease in accumulated other comprehensive loss of \$15.3 million, stock compensation expense of \$355,000 and \$314,000 of common stock issued under our dividend reinvestment plan. These increases were partially offset by the repurchase of \$10.2 million of our common stock and cash dividends paid of \$5.8 million.

Economic conditions in our market areas have continued to perform generally better than many other parts of the country. There continues to be some economic headwinds including a decline in oil prices, however despite these headwinds, many economists predict the national economy and the economy in markets we serve will continue to grow at a slow to modest pace in 2016.

Key financial indicators management follows include, but are not limited to, numerous interest rate sensitivity and interest rate risk indicators, credit risk, operations risk, liquidity risk, capital risk, regulatory risk, competition risk, yield curve risk, U.S. Agency MBS prepayment risk, and economic risk indicators.

Table of Contents

Balance Sheet Strategy

We utilize wholesale funding and securities to enhance our profitability and balance sheet composition by determining acceptable levels of credit, interest rate and liquidity risk consistent with prudent capital management. This balance sheet strategy consists of borrowing a combination of long- and short-term funds from the FHLB, and when determined appropriate, issuing brokered CDs. These funds are invested primarily in U.S. Agency MBS, long-term municipal securities and to a lesser extent, U.S. Treasury securities. Although U.S. Agency MBS often carry lower yields than traditional mortgage loans and other types of loans we make, these securities generally (i) increase the overall quality of our assets because of either the implicit or explicit guarantees of the U.S. Government, (ii) are more liquid than individual loans and (iii) may be used to collateralize our borrowings or other obligations. While the strategy of investing a substantial portion of our assets in U.S. Agency MBS and municipal securities has historically resulted in lower interest rate spreads and margins, we believe that the lower operating expenses and reduced credit risk, combined with the managed interest rate risk of this strategy, have enhanced our overall profitability over the last several years. At this time, we utilize this balance sheet strategy with the goal of enhancing overall profitability by maximizing the use of our capital.

Risks associated with the asset structure we maintain include a lower net interest rate spread and margin when compared to our peers, changes in the slope of the yield curve, which can reduce our net interest rate spread and margin, increased interest rate risk, the length of interest rate cycles, changes in volatility spreads associated with the MBS and municipal securities, the unpredictable nature of MBS prepayments and credit risks associated with the municipal securities. See “Part I - Item 1A. Risk Factors – Risks Related to Our Business” in our Annual Report on Form 10-K for the year ended December 31, 2015, for a discussion of risks related to interest rates. Our asset structure, net interest spread and net interest margin require us to closely monitor our interest rate risk. An additional risk is the change in fair value of the AFS securities portfolio as a result of changes in interest rates. Significant increases in interest rates, especially long-term interest rates, could adversely impact the fair value of the AFS securities portfolio, which could also significantly impact our equity capital. Due to the unpredictable nature of MBS prepayments, the length of interest rate cycles, and the slope of the interest rate yield curve, net interest income could fluctuate more than simulated under the scenarios modeled by our ALCO and described under “Item 3. Quantitative and Qualitative Disclosures about Market Risk” in this Quarterly Report on Form 10-Q.

Determining the appropriate size of the balance sheet is one of the critical decisions any bank makes. Our balance sheet is not merely the result of a series of micro-decisions, but rather the size is controlled based on the economics of assets compared to the economics of funding. The current low interest rate environment and investment and economic landscape requires that we monitor the interest rate sensitivity of the assets driving our growth and closely align ALCO objectives accordingly.

The management of our securities portfolio as a percentage of earning assets is guided by the current economics associated with increasing the securities portfolio, changes in our overall loan and deposit levels, and changes in our wholesale funding levels. If adequate quality loan growth is not available to achieve our goal of enhancing profitability by maximizing the use of capital, as described above, then we may purchase additional securities, if appropriate, which may cause securities as a percentage of earning assets to increase. Should we determine that increasing the securities portfolio or replacing the current securities maturities and principal payments is not an efficient use of capital, we may decrease the level of securities through proceeds from maturities, principal payments on MBS or sales. Our balance sheet strategy is designed such that our securities portfolio should help mitigate financial performance associated with potential business cycles that include slower loan growth and higher credit costs.

During the quarter ended March 31, 2016, we sold U.S. Treasury securities, U.S. Agency commercial mortgage-backed securities (“CMBS”), collateralized mortgage obligations (“CMO”) and U.S. Agency mortgage-pass throughs that resulted in an overall gain on the sale of AFS securities of \$2.4 million. As long-term interest rates declined significantly during the first quarter we decided to slightly reduce the duration and size of the securities portfolio by selling U.S. Treasury securities and selected lower yielding long-term CMBS. The CMOs we sold during

the quarter had a poor risk reward profile due to prepayment concerns as a result of the lower long-term interest rate environment. The U.S. Agency mortgage-pass throughs that were sold during the quarter were our lowest coupon pass throughs with low yields and long pay windows. As long-term interest rates declined during the quarter, we were able to replace these securities with securities with more favorable risk reward profiles. During the quarter ended March 31, 2016, we primarily purchased premium CMOs with favorable expected returns in relation to risk, U.S. Agency CMBS, and Texas municipals. Our total portfolio, comprised of investment and MBS, decreased from \$2.24 billion at December 31, 2015 to \$2.12 billion at March 31, 2016. The total unamortized premium for our MBS was relatively unchanged at \$37.2 million at both March 31, 2016 and March 31, 2015.

At March 31, 2016, securities decreased as a percentage of assets to 42.2% as compared to 43.5% at December 31, 2015 due to a 5.7% decrease in the securities portfolio. Our balance sheet management strategy is dynamic and will be continually reevaluated as market conditions warrant. As interest rates, yield curves, MBS prepayments, funding costs, security spreads and loan and

Table of Contents

deposit portfolios change, our determination of the proper types, amount and maturities of securities to own as well as funding needs and funding sources will continue to be reevaluated. Should the economics of purchasing securities decrease, we may allow this part of the balance sheet to shrink through run-off or security sales. However, should the economics become more attractive, we may strategically increase the securities portfolio and the balance sheet.

With respect to liabilities, we continue to utilize a combination of FHLB advances and deposits to achieve our strategy of minimizing cost while achieving overall interest rate risk objectives as well as the liability management objectives of the ALCO. FHLB funding is the primary wholesale funding source we are currently utilizing.

Our FHLB borrowings decreased 28.6%, or \$328.6 million, to \$819.1 million at March 31, 2016 from \$1.15 billion at December 31, 2015, due primarily to the increase in deposits and the decrease in securities held in our portfolio.

During the three months ended March 31, 2016, our long-term FHLB advances increased \$59.7 million to \$562.0 million from \$502.3 million at December 31, 2015. During the fourth quarter of 2015 and continuing into the first quarter of 2016, we entered into various variable rate advance agreements with the FHLB. At March 31, 2016, these agreements were \$190.0 million with rates ranging from one-month LIBOR plus 0.17% to one-month LIBOR plus 0.277%. In addition, we entered into various interest rate swap contracts that are treated as cash flow hedges that effectively converted the variable rate advances to fixed interest rates ranging from 0.932% to 1.647% and ranging from four years to nine years. The cash flows of the swaps are expected to be effective in hedging the variability in expected future cash flows attributable to fluctuations in the one-month LIBOR interest rate.

Our brokered CDs increased from \$85.3 million at December 31, 2015 to \$89.3 million at March 31, 2016. At March 31, 2016, approximately \$79.6 million of our brokered CDs were non-callable with remaining maturities of less than ten months. The remaining \$9.7 million of brokered CDs are long-term with short-term calls that we control. Our wholesale funding policy currently allows maximum brokered CDs of \$180 million; however, this amount could be increased to match changes in ALCO objectives. The potential higher interest expense and lack of customer loyalty are risks associated with the use of brokered CDs.

During the three months ended March 31, 2016, the increase in deposits and decrease in FHLB advances resulted in a decrease in our total wholesale funding as a percentage of deposits, to 25.8% at March 31, 2016 from 36.6% at December 31, 2015.

Results of Operations

Our results of operations are dependent primarily on net interest income, which is the difference between the interest income earned on assets (loans and investments) and interest expense due on our funding sources (deposits and borrowings) during a particular period. Results of operations are also affected by our noninterest income, provision for loan losses, noninterest expenses and income tax expense. General economic and competitive conditions, particularly changes in interest rates, changes in interest rate yield curves, prepayment rates of MBS and loans, repricing of loan relationships, government policies and actions of regulatory authorities, also significantly affect our results of operations. Future changes in applicable law, regulations or government policies may also have a material impact on us.

Net Interest Income

Net interest income is one of the principal sources of a financial institution's earnings stream and represents the difference or spread between interest and fee income generated from interest earning assets and the interest expense paid on deposits and borrowed funds. Fluctuations in interest rates or interest rate yield curves, as well as repricing characteristics and volume, and changes in the mix of interest earning assets and interest bearing liabilities, materially impact net interest income.

Net interest income for the three months ended March 31, 2016 was \$36.6 million, an increase of \$2.8 million, or 8.4%, compared to the same period in 2015 primarily due to increases in interest income on loans and mortgage-backed securities income, partially offset by increases in interest expense on deposits and short- and long-term obligations. For the three months ended March 31, 2016, our net interest margin increased slightly to 3.51% compared to 3.50% for the same period in 2015, which was partially offset by a decrease in our net interest spread to

3.40% for the three months ended March 31, 2016 from 3.42% for the same period in 2015.

During the three months ended March 31, 2016, total interest income increased \$4.4 million, or 11.4%, to \$43.0 million compared to \$38.6 million for the same period in 2015. The increase in total interest income was the result of the increase in average interest earning assets of \$295.7 million, or 6.7%, from \$4.38 billion for the three months ended March 31, 2015 to \$4.68 billion for the same period in 2016, and an increase in the average yield on earning assets from 3.95% for the three months ended March 31, 2015 to 4.06% for the three months ended March 31, 2016. The increase in the yield on interest earning assets during the three months ended March 31, 2016 is the result of an increase in the average yield on loans and MBS.

Table of Contents

During the three months ended March 31, 2016, average loans increased \$245.7 million, or 11.2%, to \$2.43 billion, when compared to \$2.19 billion for the same period in 2015. The increase in loans was primarily a result of strong loan growth in our market areas. Construction loans, commercial real estate loans, and municipal loans represent a large part of this increase.

The average yield on loans increased from 4.62% for the three months ended March 31, 2015, to 4.76% for the three months ended March 31, 2016, due to rising interest rates during the three months ended March 31, 2016. Interest income on loans increased \$3.8 million, or 16.1%, to \$27.8 million for the three months ended March 31, 2016, when compared to \$23.9 million for the same period in 2015 as a result of the increase in the average balance and the average yield. Due to the competitive loan pricing environment, we anticipate that we may be required to offer lower interest rate loans that compete with those offered by other financial institutions in order to retain quality loan relationships. Offering lower interest rate loans could impact the overall yield on loans and, therefore, profitability. Average investment and MBS increased \$44.5 million, or 2.1%, from \$2.09 billion to \$2.13 billion, for the three months ended March 31, 2016 when compared to the same period in 2015. At March 31, 2016, substantially all of our MBS were fixed rate securities. The overall yield on average investment and MBS remained relatively unchanged at 3.41% for the three months ended March 31, 2016 and 2015. Interest income on investment and MBS increased \$396,000 during the three months ended March 31, 2016, or 2.7%, compared to the same period in 2015 due to an increase in the average balance.

Average FHLB stock and other investments increased \$11.2 million, or 25.6%, to \$55.1 million, for the three months ended March 31, 2016, when compared to \$43.9 million for the same period in 2015 due to an increase in average FHLB advances during 2016 and the corresponding requirement to hold stock associated with those advances. Interest income from our FHLB stock and other investments increased \$124,000, or 133.3%, during the three months ended March 31, 2016, when compared to the same period in 2015 due to an increase in the average balance and average yield. The FHLB stock is a variable instrument with the rate typically tied to the federal funds rate. We are required as a member of the FHLB to own a specific amount of stock that changes as the level of our FHLB advances and asset size change.

During the three months ended March 31, 2016, our average loans increased when compared to the same period in 2015. Average loans increased to 52.1% of average total interest earning assets for the three months ended March 31, 2016 as compared to 50.0% for the same period in 2015. Average total securities as a percentage of average total interest earning assets was 46.8% and 48.7% for the three months ended March 31, 2016, and 2015, respectively. The other interest earning asset categories averaged 1.1% and 1.3% for the three months ended March 31, 2016 and 2015, respectively.

Total interest expense increased \$1.6 million, or 32.8%, to \$6.4 million during the three months ended March 31, 2016, as compared to \$4.8 million during the same period in 2015. The increase was attributable to the increase in average interest bearing liabilities of \$208.2 million, or 5.6%, for the three months ended March 31, 2016 compared to the same period in 2015 and an increase from the average rate paid of 0.53% for the three months ended March 31, 2015 to 0.66% for the three months ended March 31, 2016. The increase in average interest bearing liabilities was primarily the result of the increase in interest bearing deposits and short-term interest bearing liabilities.

Our average total deposits increased \$103.2 million, or 3.0%, from \$3.44 billion for the three months ended March 31, 2015 to \$3.54 billion for the three months ended March 31, 2016. Interest expense for interest bearing deposits for the three months ended March 31, 2016 increased \$727,000, or 28.7%, when compared to the same period in 2015, due to an increase in the average balance and average rate paid.

Average interest bearing deposits increased \$75.9 million, or 2.7%, from \$2.79 billion for the three months ended March 31, 2015 to \$2.87 billion for the same period in 2016 and the average rate paid increased from 0.37% for the three months ended March 31, 2015 to 0.46% for the three months ended March 31, 2016. Average time deposits increased \$51.8 million, or 6.0%, from \$863.5 million for the three months ended March 31, 2015 to \$915.3 million for the same period in 2016 and the average rate paid increased to 0.76% for the three months ended March 31, 2016, as compared to 0.64% for the same period in 2015. Average interest bearing demand deposits increased \$18.5 million, or 1.1%, for the three months ended March 31, 2016 when compared to the same period in 2015 and the

average rate paid increased to 0.34% for the three months ended March 31, 2016, as compared to 0.27% for the same period in 2015. Average savings deposits increased \$5.5 million, or 2.4%, for the three months ended March 31, 2016 when compared to the same period in 2015, and the average rate paid increased to 0.11% for the three months ended March 31, 2016, as compared to 0.09% for the same period in 2015. Average noninterest bearing demand deposits increased \$27.3 million, or 4.2%, during the three months ended March 31, 2016 compared to the same period in 2015. The latter three categories, interest bearing demand deposits, savings deposits and noninterest bearing demand deposits, are considered the lowest cost deposits and comprised 74.2% and 74.9% of total average deposits during the three months ended March 31, 2016 and 2015, respectively.

For the three months ended March 31, 2016, average short-term interest bearing liabilities, consisting primarily of FHLB advances and repurchase agreements, were \$414.0 million and reflected an increase of \$141.7 million, or 52.0%, when compared to the same period in 2015. Interest expense associated with short-term interest bearing liabilities increased \$554,000, or 390.1%, for the three months ended March 31, 2016, compared to the same period in 2015, and the average rate paid increased to 0.68% for

Table of Contents

the three months ended March 31, 2016, compared to 0.21% for the same period in 2015. The increase in the interest expense was due to an increase in the average balance and the average rate paid.

For the three months ended March 31, 2016, average long-term interest bearing liabilities consisting of FHLB advances were \$566.8 million and reflected a decrease of \$9.4 million, or 1.6%, when compared to the same period in 2015. Interest expense associated with long-term FHLB advances increased for the three months ended March 31, 2016 compared to the same period in 2015 due to an increase in the average rate paid, partially offset by a decrease in average balance. The average rate paid increased to 1.45% for the three months ended March 31, 2016, when compared to 1.26% for the same period in 2015.

Average long-term debt, consisting of our junior subordinated debentures, was \$60.3 million for the three months ended March 31, 2016 and 2015. Interest expense associated with long-term debt increased slightly for the three months ended March 31, 2016 compared to the same period in 2015, as a result of an increase in the average rate paid during the three months ended March 31, 2016. The interest rate on the \$20.6 million of long-term debentures issued to Southside Statutory Trust III adjusts quarterly at a rate equal to three-month LIBOR plus 294 basis points. The interest rate on the \$23.2 million of long-term debentures issued to Southside Statutory Trust IV adjusts quarterly at a rate equal to three-month LIBOR plus 130 basis points. The interest rate on the \$12.9 million of long-term debentures issued to Southside Statutory Trust V adjusts quarterly at a rate equal to three-month LIBOR plus 225 basis points. The interest rate on the \$3.6 million of long-term debentures issued to Magnolia Trust Company I, adjusts quarterly at a rate equal to three-month LIBOR plus 180 basis points.

(1) Interest on loans includes fees on loans that are not material in amount.

(2) Interest income includes taxable-equivalent adjustments of \$1,060 and \$1,050 for the three months ended March 31, 2016 and 2015, respectively.

(3) Interest income includes taxable-equivalent adjustments of \$3,139 and \$2,969 for the three months ended March 31, 2016 and 2015, respectively.

(4) For the purpose of calculating the average yield, the average balance of securities is presented at historical cost.

(5) Represents issuance of junior subordinated debentures.

Note: As of March 31, 2016 and 2015, loans totaling \$21,927 and \$20,321, respectively, were on nonaccrual status. Our policy is to reverse previously accrued but unpaid interest on nonaccrual loans; thereafter, interest income is recorded to the extent received when appropriate.

Table of Contents**Noninterest Income**

Noninterest income consists of revenue generated from a broad range of financial services and activities including deposit related fee based services such as ATM, overdraft, and check processing fees. In addition, we earn income from the sale of loans and securities, trust services, bank owned life insurance (“BOLI”), brokerage services, and other fee generating programs that we either provide or in which we participate.

Noninterest income was \$11.6 million for the three months ended March 31, 2016, compared to \$10.8 million for the same period in 2015, an increase of \$0.8 million, or 7.5%. The increase in noninterest income for the three months ended March 31, 2016 when compared to the same period in 2015 was primarily due to increases in other income, gain on sale of loans, and deposit services income, partially offset by a decrease in brokerage services income.

Gain on sale of loans increased \$266,000, or 70.6%, for the three months ended March 31, 2016 compared to the same period in 2015. The increase in gain on sale of loans was primarily due to an increase in the number of loans sold and the related servicing release and secondary market fees.

Brokerage services income decreased \$64,000, or 10.0%, for the three months ended March 31, 2016 compared to the same period in 2015 due to nonrecurring income received in January 2015. This decline in income was partially offset by an increase in monthly investment services income for the three months ended March 31, 2016.

Other income increased \$578,000, or 77.6%, for the three months ended March 31, 2016 compared to the same period in 2015. The increase in other income was primarily attributable to a return on other investments during the three months ended March 31, 2016, which was partially offset by a decrease in mortgage servicing fee income due to a slight decline in the fair value of mortgage servicing rights as a result of an increase in estimated prepayment speeds.

During the three months ended March 31, 2016, we pro-actively managed our investment portfolio. We primarily sold U.S. Agency CMBS, CMOs, U.S. Agency MBS, and U.S. Treasury securities that resulted in a net gain on sale of AFS securities of \$2.4 million compared to \$2.5 million for the same period in 2015. The fair value of the AFS securities portfolio was \$1.33 billion with a net unrealized gain of \$33.8 million at March 31, 2016. The net unrealized gain was comprised of \$34.5 million in unrealized gains and \$669,000 in unrealized losses. The fair value of the HTM securities portfolio was \$818.1 million with a net unrealized gain at March 31, 2016 of \$24.7 million. The net unrealized gain was comprised of \$40.4 million in unrealized gains and approximately \$15.7 million in unrealized losses. During the three months ended March 31, 2016, we primarily purchased premium CMOs, U.S. Agency CMBS, and Texas municipal securities.

Noninterest Expense

We incur certain types of noninterest expenses associated with the operation of our various business activities, the largest of which are salaries and employee benefits. Noninterest expense remained relatively unchanged at \$29.4 million for the three months ended March 31, 2016 and 2015, with only a slight decrease of \$41,000, or 0.1%.

Salaries and employee benefits expense decreased \$467,000, or 2.6%, during the three months ended March 31, 2016, when compared to the same period in 2015. This decrease was primarily the result of decreases in direct salary expense offset by an increase in employee benefits expense.

Direct salary expense and payroll taxes decreased \$2.1 million, or 13.1%, during the three months ended March 31, 2016 when compared to the same period in 2015. This decrease was primarily due to higher salary expense for the three months ended March 31, 2015, including additional salary for the employees added as a result of the acquisition of Omni. Staff levels were later reduced as we fully integrated our policies, processes, technology and operations during 2015.

Retirement expense, included in salary and benefits, increased \$1.5 million, or 154.1%, for the three months ended March 31, 2016 when compared to the same period in 2015. The increase was primarily due to a one-time expense of \$1.7 million related to the acceptance of early retirement packages by 16 employees during the three months ended March 31, 2016, partially offset by a decrease in the defined benefit and restoration plan expense due to an increase in the discount rate to 4.56% from 4.14% for the same period in 2015.

Health and life insurance expense, included in salary and benefits, increased \$76,000, or 6.2%, for the three months ended March 31, 2016, when compared to the same period in 2015. The increase for the three months ended March 31, 2016 was due to increased health claims expense partially offset by a decrease in plan administrative costs for the

comparable period of time. We have a self-insured health plan which is supplemented with stop loss insurance policies. Health insurance costs are rising nationwide and these costs may continue to increase during the remainder of 2016.

Table of Contents

Professional fees increased \$596,000, or 80.3%, for the three months ended March 31, 2016 due to increased consulting fees associated with process improvement and re-branding efforts initiated in January 2016.

Software and data processing expenses decreased \$282,000, or 27.4%, for the three months ended March 31, 2016, as compared to the same period in 2015 due primarily to the addition of software applications and integration costs in connection with the acquisition of Omni incurred during the three months ended March 31, 2015.

Income Taxes

Pre-tax income for the three months ended March 31, 2016 was \$16.5 million compared to \$11.3 million for the same period in 2015. We recorded income tax expense of \$3.0 million for the three months ended March 31, 2016 compared to income tax expense of \$1.9 million for the same period in 2015. The effective tax rate as a percentage of pre-tax income was 18.0% for the three months ended March 31, 2016, compared to an effective tax rate of 16.9% for the same period in 2015. The increase in the effective tax rate for the three months ended March 31, 2016 was due to a decrease in tax-exempt income as a percentage of pre-tax income, as compared to the same periods in 2015. Net deferred tax assets totaled \$12.5 million at March 31, 2016, as compared to \$19.9 million at December 31, 2015. No valuation allowance for deferred tax assets was recorded at March 31, 2016 or December 31, 2015, as management believes it is more likely than not that all of the deferred tax assets will be realized in future years.

Liquidity and Interest Rate Sensitivity

Liquidity management involves our ability to convert assets to cash with a minimum risk of loss to enable us to meet our obligations to our customers at any time. This means addressing: (1) the immediate cash withdrawal requirements of depositors and other fund providers; (2) the funding requirements of all lines and letters of credit; and (3) the short-term credit needs of customers. Liquidity is provided by short-term investments that can be readily liquidated with a minimum risk of loss. Cash, interest earning deposits and short-term investments with maturities or repricing characteristics of one year or less continue to be a substantial percentage of total assets. At March 31, 2016, these investments were 11.2% of total assets, as compared with 11.0% for December 31, 2015 and 13.1% for March 31, 2015. Liquidity is further provided through the matching, by time period, of rate sensitive interest earning assets with rate sensitive interest bearing liabilities. Southside Bank has three unsecured lines of credit for the purchase of overnight federal funds at prevailing rates with Frost Bank, TIB-The Independent Bankers Bank and Comerica Bank for \$30.0 million, \$15.0 million and \$7.5 million, respectively. There were no federal funds purchased at March 31, 2016. Southside Bank has a \$5.0 million line of credit with Frost Bank to be used to issue letters of credit and at March 31, 2016, we had one outstanding letter of credit for \$195,000. At March 31, 2016, the amount of additional funding Southside Bank could obtain from FHLB using unpledged securities at FHLB was approximately \$772.7 million, net of FHLB stock purchases required. Southside Bank currently has no outstanding letters of credit from FHLB as collateral for a portion of its public fund deposits.

Interest rate sensitivity management seeks to avoid fluctuating net interest margins and to enhance consistent growth of new interest income through periods of changing interest rates. The ALCO closely monitors various liquidity ratios and interest rate spreads and margins. The ALCO performs interest rate simulation tests that apply various interest rate scenarios including immediate shocks and market value of portfolio equity ("MVPE") with interest rates immediately shocked plus and minus 200 basis points to assist in determining our overall interest rate risk and adequacy of the liquidity position. In addition, the ALCO utilizes a simulation model to determine the impact on net interest income of several different interest rate scenarios. By utilizing this technology, we can determine changes that need to be made to the asset and liability mix to minimize the change in net interest income under these various interest rate scenarios. See Part I - "Item 3. Quantitative and Qualitative Disclosures about Market Risk" in this Quarterly Report on Form 10-Q.

Capital Resources

Our total shareholders' equity at March 31, 2016 was \$457.6 million, representing an increase of 3.0%, or \$13.5 million, from December 31, 2015, and represented 9.1% of total assets at March 31, 2016, compared to 8.6% of total assets at December 31, 2015.

Increases to our shareholders' equity primarily consisted of net income of \$13.5 million, a decrease in accumulated other comprehensive loss of \$15.3 million, stock compensation expense of \$355,000 and the issuance of \$314,000 in common stock (12,030 shares) through our dividend re-investment plan. These increases were partially offset by the \$10.2 million repurchase of our common stock and cash dividends paid of \$5.8 million.

As a result of new regulations, we are now required to comply with higher minimum capital requirements (the "Updated Capital Rules"). The Updated Capital Rules, which became applicable to the Company and the Bank on January 1, 2015, made substantial

Table of Contents

changes to previous capital standards. Among other things, the new regulations (i) introduced a new capital requirement known as “Common Equity Tier 1” (“CET1”), (ii) stated that Tier 1 capital consists of CET1 and “Additional Tier 1 capital” instruments meeting certain requirements, (iii) defined CET1 to require that most deductions and adjustments to regulatory capital measures be made to CET1 and not to the other components of capital and (iv) revised the scope of the deductions and adjustments from capital as compared to regulations that previously applied to the Company and other banking organizations.

The Updated Capital Rules also established the following minimum capital ratios, which started to phase in on January 1, 2015: 4.5 percent CET1 to risk-weighted assets; 6.0 percent Tier 1 capital to risk-weighted assets; 8.0 percent total capital to risk-weighted assets; and 4.0 percent Tier 1 leverage ratio to average consolidated assets. In addition, the Updated Capital Rules also introduced a minimum “capital conservation buffer” equal to 2.5% of an organization’s total risk-weighted assets, which exists in addition to these new required minimum CET1, Tier 1, and total capital ratios. The “capital conservation buffer,” which must consist entirely of CET1, is designed to absorb losses during periods of economic stress. The Updated Capital Rules provide for a number of deductions from and adjustments to CET1, which include the requirement that mortgage servicing rights, deferred tax assets arising from temporary differences that could not be realized through net operating loss carry-backs and significant investments in non-consolidated financial entities be deducted from CET1 to the extent that any one such category exceeds 10% of CET1 or all such categories in the aggregate exceed 15% of CET1.

Under the previous capital framework, the effects of accumulated other comprehensive income items included in shareholders’ equity under U.S. GAAP were excluded for the purposes of determining capital ratios. Under the Updated Capital Rules, we elected to permanently exclude capital in accumulated other comprehensive income in Common Equity Tier 1 capital, Tier 1 capital, and Total capital to risk-weighted assets and Tier 1 capital to adjusted quarterly average assets.

Under the Updated Capital Rules, certain hybrid securities, such as trust preferred securities, do not qualify as Tier 1 capital. For bank holding companies that had assets of less than \$15 billion as of December 31, 2009, which includes Southside, trust preferred securities issued prior to May 19, 2010 can be treated as Tier 1 capital to the extent that they do not exceed 25% of Tier 1 capital after the application of capital deductions and adjustments.

Failure to meet minimum capital requirements under the Updated Capital Rules could result in certain mandatory and possibly additional discretionary actions by our regulators that, if undertaken, could have a direct material effect on our financial statements. Management believes that, as of March 31, 2016, we met all capital adequacy requirements to which we were subject.

The Federal Deposit Insurance Act requires bank regulatory agencies to take “prompt corrective action” with respect to FDIC-insured depository institutions that do not meet minimum capital requirements. A depository institution’s treatment for purposes of the prompt corrective action provisions will depend on how its capital levels compare to various capital measures and certain other factors, as established by regulation. Prompt corrective action and other discretionary actions could have a direct material effect on our financial statements.

It is management’s intention to maintain our capital at a level acceptable to all regulatory authorities and future dividend payments will be determined accordingly. Regulatory authorities require that any dividend payments made by either us or the Bank not exceed earnings for that year. Accordingly, shareholders should not anticipate a continuation of the cash dividend simply because of the existence of a dividend reinvestment program. The payment of dividends will depend upon future earnings, our financial condition, and other related factors including the discretion of the board of directors.

Table of Contents

To be categorized as well capitalized we must maintain minimum Common Equity Tier 1 risk-based, Tier 1 risk-based, Total capital risk-based and Tier 1 leverage ratios as set forth in the following table:

	Actual		For Capital Adequacy Purposes		To Be Well Capitalized Under Prompt Corrective Actions Provisions	
	Amount	Ratio	Amount	Ratio	Amount	Amount

Table of Contents

Management believes that, as of March 31, 2016, Southside Bancshares and Southside Bank would meet all capital adequacy requirements under the Basel III Capital Rules on a fully phased-in basis as if such requirements were currently in effect.

The table below summarizes our key equity ratios for the three months ended March 31, 2016 and 2015:

	Three Months Ended March 31,	
	2016	2015
Return on Average Assets	1.07 %	0.79 %
Return on Average Shareholders' Equity	11.96	8.79
Dividend Payout Ratio – Basic	42.59	62.16
Dividend Payout Ratio – Diluted	42.59	62.16
Average Shareholders' Equity to Average Total Assets	8.94	8.98

Table of Contents

Composition of Loans

One of our main objectives is to seek attractive lending opportunities in Texas, primarily in the counties in which we operate. Refer to “Part I - Item 1. Business - Market Area” in our Annual Report on Form 10-K for the year ended December 31, 2015 for a discussion of our primary market area and the geographic concentration of our loan portfolio as of December 31, 2015. There were no substantial changes in these concentrations during the three months ended March 31, 2016. Substantially all of our loan originations are made to borrowers who live in and conduct business in the counties in Texas in which we operate or adjoin, with the exception of municipal loans, which are made almost entirely in Texas. Municipal loans are made to municipalities, counties, school districts and colleges primarily throughout the state of Texas.

Total loans increased \$11.5 million, or 0.5%, to \$2.44 billion at March 31, 2016 from \$2.43 billion at December 31, 2015, and increased \$268.6 million, or 12.4%, from \$2.17 billion at March 31, 2015. Average loans increased \$245.7 million, or 11.2%, during the three months ended March 31, 2016 when compared to the same period in 2015.

The banking industry is affected by general economic conditions such as interest rates, inflation, recession, unemployment and other factors beyond our control. During the last thirty years the Texas economy has continued to diversify, decreasing the overall impact of fluctuations in oil and gas prices; however, the oil and gas industry is still a significant component of the Texas economy. Since 2010, economic growth and business activity across a wide range of industries and regions in the U.S. has been slow and uneven. During a majority of that time economic growth and business activity in Texas exceeded the U.S. average. However in 2014, decisions by certain members of the Organization of Petroleum Exporting Countries (“OPEC”) to maintain higher crude oil production levels, combined with increased production levels in the United States, led to increased global oil supplies which has resulted in significant declines in market oil prices. Decreased market oil prices have compressed margins for many U.S. and Texas-based oil producers, particularly those that utilize higher-cost production technologies such as hydraulic fracking and horizontal drilling, as well as oilfield service providers, energy equipment manufacturers and transportation suppliers, among others. As of April 25, 2016, the price per barrel of crude oil was approximately \$43 compared to approximately \$98 as of December 31, 2013. A prolonged period of low oil prices could have a negative impact on the U.S. economy and, in particular, the economies of energy-dominant states such as Texas. We cannot predict whether current economic conditions will improve, remain the same or decline. A decline in credit markets generally could adversely affect our financial condition and results of operation if we are unable to extend credit or sell loans into the secondary market.

The following table sets forth loan totals for the periods presented:

	At March 31, 2016	At December 31, 2015	At March 31, 2015
	(in thousands)		
Real Estate Loans:			
Construction	\$464,750	\$438,247	\$275,960
1-4 Family Residential	644,826	655,410	693,137
Commercial	657,962	635,210	470,877
Commercial Loans	233,857	242,527	241,100
Municipal Loans	286,217	288,115	252,756
Loans to Individuals	155,619	172,244	240,784
Total Loans	\$2,443,231	\$2,431,753	\$2,174,614

Total loans increased for the three months ended March 31, 2016 as a result of the increases in construction loans and commercial real estate loans due to increased origination activity in the Austin and Dallas-Fort Worth markets. There

continues to be roll off of the indirect automobile loan portfolio acquired with the Omni acquisition and payoffs in our 1-4 family residential portfolios.

Construction loans increased \$26.5 million, or 6.0%, to \$464.8 million at March 31, 2016 from \$438.2 million at December 31, 2015, and increased \$188.8 million, or 68.4%, from \$276.0 million at March 31, 2015. Our construction loans continue to increase due to growth in our Austin and Dallas-Fort Worth markets.

Commercial real estate loans increased \$22.8 million, or 3.6%, to \$658.0 million at March 31, 2016 from \$635.2 million at December 31, 2015, and increased \$187.1 million, or 39.7%, from \$470.9 million at March 31, 2015. Our commercial real estate loans continued to increase during the three months ended March 31, 2016 primarily as a result of the continued growth in our Austin and Dallas-Fort Worth markets.

Municipal loans decreased \$1.9 million, or 0.7%, to \$286.2 million at March 31, 2016 from \$288.1 million at December 31, 2015, and increased \$33.5 million, or 13.2%, from \$252.8 million at March 31, 2015.

Commercial loans decreased \$8.7 million, or 3.6%, to \$233.9 million at March 31, 2016 from \$242.5 million at December 31, 2015, and decreased \$7.2 million, or 3.0%, from \$241.1 million at March 31, 2015.

Our 1-4 family residential loans decreased \$10.6 million, or 1.6%, to \$644.8 million at March 31, 2016 from \$655.4 million at December 31, 2015, and decreased \$48.3 million, or 7.0%, from \$693.1 million at March 31, 2015 due primarily to payoffs in excess of originations.

Loans to individuals decreased \$16.6 million, or 9.7%, to \$155.6 million at March 31, 2016, from \$172.2 million at December 31, 2015, and decreased \$85.2 million, or 35.4%, from \$240.8 million at March 31, 2015, which reflects the continued roll-off of the indirect automobile loan portfolio acquired from Omni.

Loan Loss Experience and Allowance for Loan Losses

The allowance for loan losses is based on the most current review of the loan portfolio and is a result of multiple processes. First, the bank utilizes historical data to establish general reserve amounts for each class of loans. The historical charge-off figure is further adjusted through qualitative factors that include general trends in past dues, nonaccruals and classified loans to more effectively and promptly react to both positive and negative movements. Second, our lenders have the primary responsibility for identifying problem loans based on customer financial stress and underlying collateral. These recommendations are reviewed by senior loan administration, the special assets department and the loan review department. Third, the loan review department independently reviews the portfolio on an annual basis. The loan review department follows a board-approved annual loan review scope. The loan review scope encompasses a number of considerations including the size of the loan, the type of credit extended, the seasoning of the loan and the performance of the loan. The loan review scope, as it relates to size, focuses more on larger dollar loan relationships, typically aggregate debt of \$500,000 or greater. The loan review officer also reviews specific reserves compared to general reserves to determine trends in comparative reserves as well as losses not reserved for prior to charge-off to determine the effectiveness of the specific reserve process.

At each review, a subjective analysis methodology is used to grade the respective loan. Categories of grading vary in severity from loans that do not appear to have a significant probability of loss at the time of review to loans that indicate a probability that the entire balance of the loan will be uncollectible. If full collection of the loan balance appears unlikely at the time of review, estimates of future expected cash flows or appraisals of the collateral securing the debt are used to determine the necessary allowances. The internal loan review department maintains a list of all loans or loan relationships that are graded as having more than the normal degree of risk associated with them. In addition, a list of specifically reserved loans or loan relationships of \$150,000 or more is updated on a quarterly basis in order to properly determine necessary allowances and keep management informed on the status of attempts to correct the deficiencies noted with respect to the loan.

We calculate historical loss ratios for pools of loans with similar characteristics based on the proportion of actual charge-offs experienced to the total population of loans in the pool. The historical gross loss ratios are updated based on actual charge-off experience quarterly and adjusted for qualitative factors. Our pools of similar loans include consumer loans and loans secured by 1-4 family residential loans.

Industry and our own experience indicates that a portion of our loans will become delinquent and a portion of the loans will require partial or full charge-off. Regardless of the underwriting criteria utilized, losses may occur as a result of various factors beyond our control, including, among other things, changes in market conditions affecting the value of properties used as collateral for loans and problems affecting the credit of the borrower and the ability of the borrower to make payments on the loan. Our determination of the appropriateness of the allowance for loan losses is

based on various considerations, including an analysis of the risk characteristics of various classifications of loans, previous loan loss experience, specific loans which would have loan loss potential, delinquency trends, estimated fair value of the underlying collateral, current economic conditions, and geographic and industry loan concentration. After all of the data in the loan portfolio is accumulated the reserve allocations are separated into various loan classes. As of March 31, 2016, our review of the loan portfolio indicated that a loan loss allowance of \$21.8 million was appropriate to cover probable losses in the portfolio. Changes in economic and other conditions may require future adjustments to the allowance for loan losses.

Table of Contents

During the three months ended March 31, 2016, the allowance for loan losses increased \$2.1 million, or 10.5%, to \$21.8 million, or 0.89% of total loans, when compared to \$19.7 million, or 0.81% of total loans at December 31, 2015 as a result of the additional provision associated with one large impaired commercial borrowing relationship. The allowance for loan losses increased \$4.9 million, or 28.8% from \$16.9 million, or 0.78% of total loans at March 31, 2015 as a result of loan growth and impaired loans.

For both the three months ended March 31, 2016 and 2015, loan charge-offs were \$1.1 million and recoveries were \$0.9 million. The necessary provision expense was estimated at \$2.3 million for the three months ended March 31, 2016, a decrease of \$1.5 million, or 39.8%, from \$3.8 million for the comparable period in 2015.

Nonperforming Assets

Nonperforming assets consist of delinquent loans 90 days or more past due, nonaccrual loans, OREO, repossessed assets and restructured loans. Nonaccrual loans are loans 90 days or more delinquent and collection in full of both the principal and interest is not expected. Additionally, some loans that are not delinquent may be placed on nonaccrual status due to doubts about full collection of principal or interest. When a loan is categorized as nonaccrual, the accrual of interest is discontinued and any accrued balance is reversed for financial statement purposes. Restructured loans represent loans that have been renegotiated to provide a reduction or deferral of interest or principal because of deterioration in the financial position of the borrowers. The restructuring of a loan is considered a “troubled debt restructuring” if both (i) the borrower is experiencing financial difficulties and (ii) the creditor has granted a concession. Concessions may include interest rate reductions or below market interest rates, principal forgiveness, restructuring amortization schedules and other actions intended to minimize potential losses. Categorization of a loan as nonperforming is not in itself a reliable indicator of potential loan loss. Other factors, such as the value of collateral securing the loan and the financial condition of the borrower must be considered in judgments as to potential loan loss. OREO represents real estate taken in full or partial satisfaction of debts previously contracted. The dollar amount of OREO is based on a current evaluation of the OREO at the time it is recorded on our books, net of estimated selling costs. Updated valuations are obtained as needed and any additional impairments are recognized. The following tables set forth nonperforming assets for the periods presented (in thousands):

	At March 31, 2016	At December 31, 2015	At March 31, 2015
Nonaccrual loans	\$21,927	\$ 20,526	\$20,321
Accruing loans past due more than 90 days	7	3	1
Restructured loans	11,762	11,143	5,782
Other real estate owned	265	744	985
Repossessed assets	85	64	173
Total Nonperforming Assets	\$34,046	\$ 32,480	\$27,262

Asset Quality Ratios:

	At March 31, 2016	At December 31, 2015	At March 31, 2015
Nonaccruing loans to total loans	0.90 %	0.84 %	0.93 %
Allowance for loan losses to nonaccruing loans	99.42	96.15	83.29
Allowance for loan losses to nonperforming assets	64.03	60.76	62.09
Allowance for loan losses to total loans	0.89	0.81	0.78
Nonperforming assets to total assets	0.68	0.63	0.58
Net charge-offs to average loans	0.04	0.09	0.04

Total nonperforming assets at March 31, 2016 were \$34.0 million, an increase of \$1.6 million, or 4.8%, from \$32.5 million at December 31, 2015 and an increase of \$6.8 million, or 24.9%, from \$27.3 million at March 31, 2015.

From December 31, 2015 to March 31, 2016, nonaccrual loans increased \$1.4 million, or 6.8%, to \$21.9 million, and increased \$1.6 million, or 7.9%, from March 31, 2015. Of the total nonaccrual loans at March 31, 2016, 64.8% are commercial loans, 21.6% are commercial real estate loans, 6.4% are residential real estate loans, 6.6% are loans to individuals, and 0.6% are construction loans. Restructured loans increased \$619,000, or 5.6%, to \$11.8 million at March 31, 2016, from \$11.1 million at December 31, 2015 and increased \$6.0 million, or 103.4%, from \$5.8 million at March 31, 2015. OREO decreased \$479,000, or 64.4%, to

Table of Contents

\$265,000 at March 31, 2016 from \$744,000 at December 31, 2015 and decreased \$720,000, or 73.1%, from \$985,000 at March 31, 2015. The OREO at March 31, 2016 consisted primarily of commercial real estate and 1-4 family residential properties. We are actively marketing all properties and none are being held for investment purposes. Repossessed assets increased \$21,000, or 32.8%, to \$85,000 at March 31, 2016, from \$64,000 at December 31, 2015 and decreased \$88,000, or 50.9%, from \$173,000 at March 31, 2015.

Acquisition

See “Note 2 – Acquisition” in our consolidated financial statements included in this Quarterly Report on Form 10-Q.

Expansion

We plan to open a loan production office in Frisco, Texas during the third quarter of 2016.

Recent Accounting Pronouncements

See “Note 1 – Summary of Significant Accounting and Reporting Policies” in our consolidated financial statements included in this Quarterly Report on Form 10-Q.

Table of Contents**ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK**

The disclosures set forth in this item are qualified by the section captioned “Forward-Looking Statements” included in “Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations” of this report and other cautionary statements set forth elsewhere in this Quarterly Report on Form 10-Q.

Refer to the discussion of market risks included in “Item 7A. Quantitative and Qualitative Disclosures About Market Risks” in our Annual Report on Form 10-K for the year ended December 31, 2015. There have been no significant changes in the types of market risks we face since December 31, 2015.

In the banking industry, a major risk exposure is changing interest rates. The primary objective of monitoring our interest rate sensitivity, or risk, is to provide management the tools necessary to manage the balance sheet to minimize adverse changes in net interest income as a result of changes in the direction and level of interest rates. Federal Reserve Board monetary control efforts, the effects of deregulation, economic uncertainty and legislative changes have been significant factors affecting the task of managing interest rate sensitivity positions in recent years.

In an attempt to manage our exposure to changes in interest rates, management closely monitors our exposure to interest rate risk through our ALCO. Our ALCO meets regularly and reviews our interest rate risk position and makes recommendations to our board for adjusting this position. In addition, our board reviews our asset/liability position on a monthly basis. We primarily use two methods for measuring and analyzing interest rate risk: net income simulation analysis and MVPE modeling. We utilize the net income simulation model as the primary quantitative tool in measuring the amount of interest rate risk associated with changing market rates. This model quantifies the effects of various interest rate scenarios on projected net interest income and net income over the next 12 months. The model is used to measure the impact on net interest income relative to a base case scenario of rates immediately increasing 100 and 200 basis points or decreasing 100 and 200 basis points over the next 12 months. These simulations incorporate assumptions regarding balance sheet growth and mix, pricing and the repricing and maturity characteristics of the existing and projected balance sheet. The impact of interest rate-related risks such as prepayment, basis and option risk are also considered. As of March 31, 2016, the model simulations projected that 100 and 200 basis point immediate increases in interest rates would result in positive variances on net interest income of 0.96% and 2.36%, respectively, relative to the base case over the next 12 months, while an immediate decrease in interest rates of 100 and 200 basis points would result in negative variances in net interest income of 1.98% and 2.16%, respectively, relative to the base case over the next 12 months. As of December 31, 2015, the model simulations projected that 100 and 200 basis point immediate increases in interest rates would result in negative variances on net interest income of 0.42% and 1.78%, respectively, relative to the base case over the next 12 months, while an immediate decrease in interest rates of 100 and 200 basis points would result in a negative variance in net interest income of 1.18% and 0.38%, respectively, relative to the base case over the next 12 months. As of March 31, 2015, the model simulations projected that 100 and 200 basis point immediate increases in interest rates would result in negative variances on net interest income of 3.81% and 5.27%, respectively, relative to the base case over the next 12 months, while an immediate decrease in interest rates of 100 and 200 basis points would result in a negative variance in net interest income of 2.52% and 2.07%, respectively, relative to the base case over the next 12 months. As part of the overall assumptions, certain assets and liabilities are given reasonable floors. This type of simulation analysis requires numerous assumptions including but not limited to changes in balance sheet mix, prepayment rates on mortgage-related assets and fixed rate loans, cash flows and repricing of all financial instruments, changes in volumes and pricing, future shapes of the yield curve, relationship of market interest rates to each other (basis risk), credit spread and deposit sensitivity. Assumptions are based on management’s best estimates but may not accurately reflect actual results under certain changes in interest rates.

The ALCO monitors various liquidity ratios to ensure a satisfactory liquidity position for us. Management continually evaluates the condition of the economy, the pattern of market interest rates and other economic data to determine the types of investments that should be made and at what maturities. Using this analysis, management from time to time assumes calculated interest sensitivity gap positions to maximize net interest income based upon anticipated movements in the general level of interest rates. Regulatory authorities also monitor our gap position along with other

liquidity ratios. In addition, as described above, we utilize a simulation model to determine the impact of net interest income under several different interest rate scenarios. By utilizing this technology, we can determine changes that need to be made to the asset and liability mixes to mitigate the change in net interest income under these various interest rate scenarios.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Management, including our Chief Executive Officer (“CEO”) and our Chief Financial Officer (“CFO”), undertook an evaluation of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended (the “Exchange Act”)) as of the end of the period covered by this report, and, based on that evaluation, our CEO and CFO concluded that our disclosure controls and procedures were effective as of the end of the period covered by this report, in recording, processing, summarizing and reporting in a timely manner the information that the Company is required to disclose in its reports under the Exchange Act and in accumulating and communicating to the Company’s management, including the Company’s CEO and CFO, such information as appropriate to allow timely decisions regarding required disclosure.

Changes in Internal Control Over Financial Reporting

No changes were made to our internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) during the quarter ended March 31, 2016 that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

We are involved with various litigation in the normal course of business. Management, after consulting with our legal counsel, believes that any liability resulting from litigation will not have a material effect on our financial position, results of operations or liquidity.

ITEM 1A. RISK FACTORS

Additional information regarding risk factors appears in “Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations - Forward-Looking Statements” of this Form 10-Q and in Part I - “Item 1A. Risk Factors” in our Annual Report on Form 10-K for the year ended December 31, 2015. There have been no material changes from the risk factors previously disclosed in our Annual Report on Form 10-K for the year ended December 31, 2015. The risks and uncertainties described in our Annual Report on Form 10-K for the year ended December 31, 2015 are not the only ones we face. Additional risks and uncertainties that management is not aware of or focused on or that management currently deems immaterial may also impair our business operations.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

The following table provides information with respect to purchases we made or were made on our behalf or any “affiliated purchaser” (as defined in Rule 10b-18(a)(3) under the Securities Exchange Act of 1934), of our common stock during the three months ended March 31, 2016.

On January 28, 2016, the Board of Directors approved a Stock Repurchase Plan. The Board authorized the repurchase, from time to time, of up to five percent of the issued and outstanding common stock, or approximately 1.27 million shares, in open market purchases and privately negotiated transactions at prevailing market prices. The Company has no obligation to repurchase any shares under the Stock Repurchase Plan and may suspend or discontinue it at any time.

Period	Total Number of Shares Purchased	Average Cost Per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Number of Shares That May Yet Be Purchased Under the Plans or Programs
January 1, 2016 through January 31, 2016	—	\$ —	—	1,269,952
February 1, 2016 through February 29, 2016	421,393	22.89	421,393	848,559
March 1, 2016 through March 31, 2016	22,033	25.15	22,033	826,526
Total	443,426	\$ 23.00	443,426
