This Prospectus is not an offer to sell these securities and is not soliciting an offer to buy these securities in any state where the offer or sale is not permitted.

Subject to completion, dated December 2, 2011

BASE PROSPECTUS

\$100,000,000

Guggenheim Strategic Opportunities Fund

Common Shares

Investment Objective and Philosophy. Guggenheim Strategic Opportunities Fund (the “Fund”) is a diversified, closed-end management investment company. The Fund’s investment objective is to maximize total return through a combination of current income and capital appreciation. The Fund will pursue a relative value-based investment philosophy, which utilizes quantitative and qualitative analysis to seek to identify securities or spreads between securities that deviate from their perceived fair value and/or historical norms. The Fund’s sub-adviser seeks to combine a credit-managed fixed-income portfolio with access to a diversified pool of alternative investments and equity strategies. The Fund’s investment philosophy is predicated upon the belief that thorough research and independent thought are rewarded with performance that has the potential to outperform benchmark indexes with both lower volatility and lower correlation of returns as compared to such benchmark indexes. The Fund cannot ensure investors that it will achieve its investment objective.

Investment Portfolio. The Fund will seek to achieve its investment objective by investing in a wide range of fixed-income and other debt and senior equity securities (“Income Securities”) selected from a variety of sectors and credit qualities, including, but not limited to, corporate bonds, loans and loan participations, structured finance investments, U.S. government and agency securities, mezzanine and preferred securities and convertible securities, and in common stocks, limited liability company interests, trust certificates and other equity investments (“Common Equity Securities”) that the Fund’s sub-adviser believes offer attractive yield and/or capital appreciation potential, including employing a strategy of writing (selling) covered call and put options on such equities.

Offering. The Fund may offer, from time to time, up to \$100,000,000 aggregate initial offering price of common shares of beneficial interest, par value \$0.01 per share (“Common Shares”), in one or more offerings in amounts, at prices and on terms set forth in one or more supplements to this Prospectus (each a “Prospectus Supplement”). You should read this Prospectus and any related Prospectus Supplement carefully before you decide to invest in the Common Shares.

The Fund may offer Common Shares (1) directly to one or more purchasers, (2) through agents that the Fund may designate from time to time or (3) to or through underwriters or dealers. The Prospectus Supplement relating to a particular offering of Common Shares will identify any agents or underwriters involved in the sale of Common Shares, and will set forth any applicable purchase price, fee, commission or discount arrangement between the Fund and agents or underwriters or among underwriters or the basis upon which such amount may be calculated. The Fund may not sell Common Shares through agents, underwriters or dealers without delivery of this Prospectus and a Prospectus Supplement. See “Plan of Distribution.”

Investment Adviser and Sub-Adviser. Guggenheim Funds Investment Advisors, LLC (the “Investment Adviser”) serves as the Fund’s investment adviser and is responsible for the management of the Fund. Guggenheim Partners Asset Management, LLC (the “Sub-Adviser”) will be responsible for the management of the Fund’s portfolio of securities. Each of the Investment Adviser and the Sub-Adviser is a wholly-owned subsidiary of Guggenheim Partners, LLC (“Guggenheim Partners”). Guggenheim Partners is a diversified financial services firm with wealth management, capital markets, investment management and proprietary investing businesses, whose clients are a mix of individuals, family offices, endowments, foundation insurance companies and other institutions that have entrusted Guggenheim Partners with the supervision of more than \$100 billion of assets as of June 30, 2011. Guggenheim Partners is headquartered in Chicago and New York with a global network of offices throughout the United States, Europe, and Asia.

Investing in the Fund’s Common Shares involves certain risks. See “Risks” on page 52 of this Prospectus.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this Prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

Prospectus dated , 2012

(continued from previous page)

Investment Parameters. The Fund may allocate its assets among a wide variety of Income Securities and Common Equity Securities, provided that, under normal market conditions, the Fund will not invest more than: 60% of its total assets in Income Securities rated below-investment grade (commonly referred to as “high-yield” or “junk” bonds), which are considered speculative with respect to the issuer’s capacity to pay interest and repay principal; 50% of its total assets in Common Equity Securities consisting of common stock; 20% of its total assets in other investment companies, including registered investment companies, private investment funds and/or other pooled investment vehicles; 20% of its total assets in non-U.S. dollar-denominated Income Securities; and 10% of its total assets in Income Securities of issuers in emerging markets.

Common Shares. The Fund’s currently outstanding Common Shares are, and the Common Shares offered in this Prospectus will be, listed on the New York Stock Exchange (the “NYSE”) under the symbol “GOF.” The net asset value of the Common Shares at the close of business on [•], 2011 was \$[•] per share, and the last sale price of the Common Shares on the NYSE on such date was \$[•]. See “Market and Net Asset Value Information.”

Financial Leverage. The Fund may seek to enhance the level of its current distributions by utilizing financial leverage through the issuance of preferred shares (“Preferred Shares”), through borrowing or the issuance of commercial paper or other forms of debt (“Borrowings”), through reverse repurchase agreements, dollar rolls or similar transactions or through a combination of the foregoing (collectively “Financial Leverage”). The Fund’s total Financial Leverage may vary over time; however, the aggregate amount of Financial Leverage is not currently expected to exceed 33 1 / 3 % of the Fund’s Managed Assets (as defined herein) after such issuance and/or borrowing; however, the Fund may utilize Financial Leverage up to the limits imposed by the Investment Company Act of 1940, as amended. The Fund has entered into a committed facility agreement with BNP Paribas Prime Brokerage, Inc. (“BNP Paribas”) pursuant to which the Fund may borrow up to \$30 million. As of May 31, 2011, outstanding Borrowings under the committed facility agreement were approximately \$22.4 million, which represented approximately 8.4% of the Fund’s Managed Assets as of such date. The Fund invests a portion of its total assets through participation in the Term Asset-Backed Securities Loan Facility program (the “TALF Program”), a program developed by the Board of Governors of the Federal Reserve System and the U.S. Department of the Treasury and operated by the Federal Reserve Bank of New York (“FRBNY”). Under the TALF Program, the FRBNY may provide loans to the Fund to purchase certain investment-grade, asset-backed securities which must be backed by auto loans, student loans, credit card loans, small business loans or certain commercial mortgage-backed securities. As of May 31, 2011, the Fund’s borrowings under the TALF Program represented approximately 3.9% of the Fund’s Managed Assets. In addition, as of May 31, 2011, the Fund had reverse repurchase agreements outstanding representing Financial Leverage equal to approximately 17.8% of the Fund’s Managed Assets. As of May 31, 2011, the Fund’s total Financial Leverage represented approximately 30.1% of the Fund’s Managed Assets.

You should read this Prospectus, which contains important information about the Fund, together with any Prospectus Supplement, before deciding whether to invest, and retain it for future reference. A Statement of Additional Information, dated , 2012, containing additional information about the Fund, has been filed with the Securities and Exchange Commission (the “SEC”) and is incorporated by reference in its entirety into this Prospectus. You may request a free copy of the Statement of Additional Information, the table of contents of which is on page 87 of this Prospectus, by calling (800) 345-7999 or by writing to the Investment Adviser at Guggenheim Funds Investment Advisors, LLC, 2455 Corporate West Drive, Lisle, Illinois 60532, or you may obtain a copy (and other information regarding the Fund) from the SEC’s web site (<http://www.sec.gov>). Free copies of the Fund’s reports and

its Statement of Additional Information will also be available from the Fund's web site at www.guggenheimfunds.com/gof. The information contained in, or that can be accessed through, the Fund's website is not part of this Prospectus.

The Fund's Common Shares do not represent a deposit or obligation of, and are not guaranteed or endorsed by, any bank or other insured depository institution and are not federally insured by the Federal Deposit Insurance Corporation, the Federal Reserve Board or any other government agency.

You should rely only on the information contained or incorporated by reference in this Prospectus. The Fund has not authorized anyone to provide you with different information. The Fund is not making an offer of these securities in any state where the offer is not permitted.

FORWARD-LOOKING STATEMENTS

This Prospectus contains or incorporates by reference forward-looking statements, within the meaning of the federal securities laws, that involve risks and uncertainties. These statements describe the Fund’s plans, strategies, and goals and the Fund’s beliefs and assumptions concerning future economic and other conditions and the outlook for the Fund, based on currently available information. In this Prospectus, words such as “anticipates,” “believes,” “expects,” “objectives,” “goals,” “future,” “intends,” “seeks,” “will,” “may,” “could,” “should,” and similar expressions are used in an effort to identify forward-looking statements, although some forward-looking statements may be expressed differently. The Fund is not entitled to the safe harbor for forward-looking statements pursuant to Section 27A of the Securities Act of 1933, as amended.

PROSPECTUS SUMMARY

This is only a summary of information contained elsewhere in this Prospectus. This summary does not contain all of the information that you should consider before investing in the Fund's Common Shares. You should carefully read the more detailed information contained elsewhere in this Prospectus and any related Prospectus Supplement prior to making an investment in the Fund, especially the information set forth under the headings "Investment Objective and Policies" and "Risks." You may also wish to request a copy of the Fund's Statement of Additional Information, dated , 2012 (the "SAI"), which contains additional information about the Fund.

The Fund

Guggenheim Strategic Opportunities Fund (the "Fund") is a diversified, closed-end management investment company that commenced operations on July 26, 2007. The Fund's objective is to maximize total return through a combination of current income and capital appreciation.

The Fund's common shares of beneficial interest, par value \$0.01 per share, are called "Common Shares" and the holders of Common Shares are called "Common Shareholders" throughout this Prospectus.

Guggenheim Funds Investment Advisors, LLC (the "Investment Adviser") serves as the Fund's investment adviser and is responsible for the management of the Fund. Guggenheim Partners Asset Management, LLC (the "Sub-Adviser") is responsible for the management of the Fund's portfolio of securities. Each of the Investment Adviser and the Sub-Adviser are wholly-owned subsidiaries of Guggenheim Partners, LLC ("Guggenheim Partners").

The Offering

The Fund may offer, from time to time, up to \$100,000,000 aggregate initial offering price of Common Shares, on terms to be determined at the time of the offering. The Fund will offer Common Shares at prices and on terms to be set forth in one or more supplements to this Prospectus (each a "Prospectus Supplement").

The Fund may offer Common Shares (1) directly to one or more purchasers, (2) through agents that the Fund may designate from time to time, or (3) to or through underwriters or dealers. The Prospectus Supplement relating to a particular offering will identify any agents or underwriters involved in the sale of Common Shares, and will set forth any applicable purchase price, fee, commission or discount arrangement between the Fund and agents or underwriters or among underwriters or the basis upon which such amount may be calculated. The Fund may not sell Common Shares through agents, underwriters or dealers without delivery of this Prospectus and a Prospectus Supplement describing the method and terms of the offering of Common Shares. See "Plan of Distribution."

Use of Proceeds

Unless otherwise specified in a Prospectus Supplement, the Fund intends to invest the net proceeds of an offering of Common Shares in accordance with its investment objective and policies as stated herein. It is currently anticipated that the Fund will be able to invest substantially all of the net proceeds of an offering of Common Shares in accordance with its investment objective and policies within three months after the completion of such offering. Pending such investment, it is anticipated that the proceeds will be invested in U.S. government securities or high quality, short-term money market securities. The Fund may also use the proceeds for working capital

1

purposes, including the payment of distributions, interest and operating expenses, although the Fund currently has no intent to issue Common Shares primarily for this purpose.

Investment Objective and Philosophy

The Fund's investment objective is to maximize total return through a combination of current income and capital appreciation. The Fund will pursue a relative value-based investment philosophy, which utilizes quantitative and qualitative analysis to seek to identify securities or spreads between securities that deviate from their perceived fair value and/or historical norms. The Sub-Adviser seeks to combine a credit-managed fixed-income portfolio with access to a diversified pool of alternative investments and equity strategies. The Fund's investment philosophy is predicated upon the belief that thorough research and independent thought are rewarded with performance that has the potential to outperform benchmark indexes with both lower volatility and lower correlation of returns as compared to such benchmark indexes. The Fund cannot ensure investors that it will achieve its investment objective. The Fund's investment objective is considered fundamental and may not be changed without the approval of Common Shareholders. See "Investment Objective and Policies—Investment Philosophy and Investment Process."

Investment Process

The Sub-Adviser's investment process is a collaborative effort between its Portfolio Construction Group, which utilizes tools such as Guggenheim Partners' Dynamic Financial Analysis Model to determine allocation of assets among a variety of sectors, and its Sector Specialists, who are responsible for security selection within these sectors and for implementing securities transactions, including the structuring of certain securities directly with the issuer or with investment banks and dealers involved in the origination of such securities.

Investment Portfolio

The Fund will seek to achieve its investment objective by investing in:

Income Securities. The Fund may invest in a wide range of fixed-income and other debt and senior equity securities ("Income Securities") selected from a variety of sectors and credit qualities. The Fund may invest in Income Securities of any credit quality, including Income Securities rated below-investment grade (commonly referred to as "high-yield" or "junk" bonds), which are considered speculative with respect to the issuer's capacity to pay interest and repay principal. The sectors and types of Income Securities in which the Fund may invest, include, but are not limited to:

- corporate bonds;
- loans and loan participations (including senior secured floating rate loans, "second lien" secured floating rate loans, and other types of secured and unsecured loans with fixed and variable interest rates) (collectively, "Loans");

- structured finance investments (including residential and commercial mortgage-related securities, asset-backed securities, collateralized debt obligations and risk-linked securities);
-

- U.S. government and agency securities;
- mezzanine and preferred securities; and
- convertible securities.

Common Equity Securities and Covered Call Option Strategy. The Fund may invest in common stocks, limited liability company interests, trust certificates and other equity investments (“Common Equity Securities”) that the Sub-Adviser believes offer attractive yield and/or capital appreciation potential. As part of its Common Equity Securities strategy, the Fund currently intends to employ a strategy of writing (selling) covered call options and may, from time to time, buy or sell put options on individual Common Equity Securities and, to a lesser extent, on indices of securities and sectors of securities. This covered call option strategy is intended to generate current gains from option premiums as a means to enhance distributions payable to the Fund’s Common Shareholders.

Structured Finance Investments. The Fund may invest in structured finance investments, which are Income Securities and Common Equity Securities typically issued by special purpose vehicles that hold income-producing securities (e.g., mortgage loans, consumer debt payment obligations and other receivables) and other financial assets. Structured finance investments are tailored, or packaged, to meet certain financial goals of investors. Typically, these investments provide investors with capital protection, income generation and/or the opportunity to generate capital growth. The Sub-Adviser believes that structured finance investments provide attractive risk-adjusted returns, frequent sector rotation opportunities and prospects for adding value through security selection. Structured finance investments include:

Mortgage-Related Securities. Mortgage-related securities are a form of derivative collateralized by pools of commercial or residential mortgages. Pools of mortgage loans are assembled as securities for sale to investors by various governmental, government-related and private organizations. These securities may include complex instruments such as collateralized mortgage obligations, REITs (including debt and preferred stock issued by REITs), and other real estate-related securities. The mortgage-related securities in which the Fund may invest include those with fixed, floating or variable interest rates, those with interest rates that change based on multiples of changes in a specified index of interest rates, and those with interest rates that change inversely to changes in interest rates, as well as those that do not bear interest. The Fund may invest in residential and commercial mortgage-related securities issued by governmental entities and private issuers, including subordinated mortgage-related securities. The underlying assets of certain mortgage-related securities may be subject to prepayments,

which shorten the weighted average maturity and may lower the return of such securities.

Asset-Backed Securities. Asset-backed securities are a form of derivative issued by governmental entities and private issuers which utilizes securitization techniques similar to those used for mortgage- related securities. The collateral for these securities may include home

equity loans, automobile and credit card receivables, boat loans, computer leases, airplane leases, mobile home loans, recreational vehicle loans and hospital account receivables. The Fund may invest in these and other types of asset-backed securities that may be developed in the future. Asset-backed securities are subject to the same risk of prepayment described above with respect to mortgage-related securities. Asset-backed securities may provide the Fund with a less effective security interest in the related collateral than do mortgage-related securities, and thus it is possible that recovery on repossessed collateral might be unavailable or inadequate to support payments on these securities.

Collateralized Debt Obligations. A collateralized debt obligation (“CDO”) is an asset-backed security whose underlying collateral is typically a portfolio of bonds, bank loans, other structured finance securities and/or synthetic instruments. Where the underlying collateral is a portfolio of bonds, a CDO is referred to as a collateralized bond obligation (“CBO”). Where the underlying collateral is a portfolio of bank loans, a CDO is referred to as a collateralized loan obligation (“CLO”). Investors in CDOs bear the credit risk of the underlying collateral. Multiple tranches of securities are issued by the CDO, offering investors various maturity and credit risk characteristics. Tranches are categorized as senior, mezzanine, and subordinated/equity, according to their degree of risk. If there are defaults or the CDO’s collateral otherwise underperforms, scheduled payments to senior tranches take precedence over those of mezzanine tranches, and scheduled payments to mezzanine tranches take precedence over those to subordinated/equity tranches. CDOs are subject to the same risk of prepayment described with respect to certain mortgage-related and asset-backed securities. The value of CDOs may be affected by changes in the market’s perception of the creditworthiness of the servicing agent for the pool, the originator of the pool, or the financial institution or fund providing the credit support or enhancement.

Risk-Linked Securities. Risk-linked securities (“RLS”) are a form of derivative issued by insurance companies and insurance-related special purpose vehicles that apply securitization techniques to catastrophic property and casualty damages. RLS are typically debt obligations for which the return of principal and the payment of interest are contingent on the non-occurrence of a pre-defined “trigger event.” Depending on the specific terms and structure of the RLS, this trigger could be the result of a hurricane, earthquake or some other catastrophic event.

Real Property Asset Companies. The Fund may invest in Income Securities and Common Equity Securities issued by companies that own, produce, refine, process, transport and market “real property assets,” such as real estate and the natural resources upon or within real estate (“Real Property Asset Companies”).

Personal Property Asset Companies. The Fund may invest in Income Securities and Common Equity Securities issued by companies that seek to

profit primarily from the ownership, rental, leasing, financing

4

or disposition of personal (as opposed to real) property assets (“Personal Property Asset Companies”). Personal (as opposed to real) property includes any tangible, movable property or asset. The Fund will typically seek to invest in Income Securities and Common Equity Securities of Personal Property Asset Companies the investment performance of which is not expected to be highly correlated with traditional market indexes because the personal property asset held by such company is non-correlated with traditional debt or equity markets. Such personal property assets include special situation transportation assets (e.g., railcars, airplanes and ships) and collectibles (e.g., antiques, wine and fine art).

Private Securities. The Fund may invest in privately issued Income Securities and Common Equity Securities of both public and private companies (“Private Securities”). Private Securities have additional risk considerations than comparable public securities, including availability of financial information about the issuer and valuation and liquidity issues.

Investment Funds. As an alternative to holding investments directly, the Fund may also obtain investment exposure to Income Securities and Common Equity Securities by investing in other investment companies, including registered investment companies, private investment funds and/or other pooled investment vehicles (collectively, “Investment Funds”). The Fund may invest up to 30% of its total assets in Investment Funds that primarily hold (directly or indirectly) investments in which the Fund may invest directly, of which amount up to 20% of its total assets may be invested in Investment Funds that are registered as investment companies (“Registered Investment Funds”) under the Investment Company Act of 1940, as amended (the “1940 Act”). As used in this Prospectus, “Private Investment Funds” means privately offered Investment Funds that are excluded from the definition of “investment company” under the 1940 Act, including by operation of Section 3(c)(1) or 3(c)(7) thereof. Such funds may be commonly referred to as “hedge funds” or “private equity funds.” Investments in other Investment Funds involve operating expenses and fees at the Investment Fund level that are in addition to the expenses and fees borne by the Fund and are borne indirectly by holders of the Fund’s Common Shares.

Synthetic Investments. As an alternative to holding investments directly, the Fund may also obtain investment exposure to Income Securities and Common Equity Securities through the use of customized derivative instruments (including swaps, options, forwards, notional principal contracts or other financial instruments) to replicate, modify or replace the economic attributes associated with an investment in Income Securities and Common Equity Securities (including interests in Investment Funds).

Derivative Transactions. The Fund may purchase and sell derivative instruments (which derive their value by reference to another instrument, security or index) for investment purposes, such as obtaining investment exposure to an investment category; risk management purposes, such as hedging against fluctuations in

securities prices or interest rates; diversification purposes; or to change the duration of the Fund. In order to help protect the soundness of derivative transactions and outstanding derivative positions, the Sub- Adviser generally requires derivative counterparties to have a minimum credit rating of A from Moody's Investors Service (or a comparable rating from another rating agency) and monitors such rating on an ongoing basis. In addition, the Sub-Adviser seeks to allocate derivative transactions to limit exposure to any single counterparty. The Fund has not adopted a maximum percentage limit with respect to derivative investments. However, the maximum level of and types of derivative transactions used by the Fund will be approved by the Board of Trustees and the Board of Trustees will receive regular reports from the Investment Adviser and the Sub-Adviser regarding the Fund's use of derivative instruments and the effect of derivative transactions on the management of the Fund's portfolio and the performance of the Fund.

Investment Policies

The Fund may allocate its assets among a wide variety of Income Securities and Common Equity Securities, provided that, under normal market conditions, the Fund will not invest more than:

- 60% of its total assets in Income Securities rated below- investment grade;
- 50% of its total assets in Common Equity Securities consisting of common stock;
- 30% of its total assets in Investment Funds;
- 20% of its total assets in non-U.S. dollar-denominated Income Securities of corporate and governmental issuers located outside the United States; and
- 10% of its total assets in Income Securities of issuers in emerging markets.

The percentage of the Fund's total assets allocated to any category of investment may at any given time be significantly less than the maximum percentage permitted pursuant to the above referenced investment policies.

Unless otherwise stated in this Prospectus or the SAI, the Fund's investment policies are considered non-fundamental and may be changed by the Board of Trustees of the Fund (the "Board of Trustees") without Common Shareholder approval. The Fund will provide investors with at least 60 days' prior written notice of any change in the Fund's investment policies. See "Investment Objective and Policies" in this Prospectus and in the SAI.

Financial Leverage

The Fund may seek to enhance the level of its current distributions by utilizing financial leverage through the issuance of preferred shares

(“Preferred Shares”), through borrowing or the issuance of commercial paper or other forms of debt (“Borrowings”), through reverse repurchase agreements, dollar rolls or similar transactions or through a combination of the foregoing (collectively “Financial Leverage”). The Fund’s total Financial Leverage may vary over time; however, the aggregate amount of Financial Leverage is not expected to exceed 33 1/3% of the Fund’s Managed Assets (as defined herein) after such

issuance and/or borrowing; however, the Fund may utilize Financial Leverage up to the limits imposed by the 1940 Act. The Fund may also borrow in excess of such limit for temporary purposes such as the settlement of transactions.

The Fund has entered into a committed facility agreement with BNP Paribas Prime Brokerage, Inc. (“BNP Paribas”) pursuant to which the Fund may borrow up to \$30 million. As of May 31, 2011, outstanding Borrowings under the committed facility agreement were approximately \$22.4 million, which represented approximately 8.4% of the Fund’s Managed Assets as of such date. The Fund invests a portion of its Managed Assets through participation in the Term Asset-Backed Securities Loan Facility program (the “TALF Program”), a program developed by the Board of Governors of the Federal Reserve System and the U.S. Department of the Treasury and operated by the Federal Reserve Bank of New York (“FRBNY”). Under the TALF Program, the FRBNY may provide loans to the Fund to purchase certain investment-grade, asset-backed securities which must be backed by auto loans, student loans, credit card loans, small business loans or certain commercial mortgage-backed securities. As of May 31, 2011, the Fund’s borrowings under the TALF Program represented approximately 3.9% of the Fund’s Managed Assets. In addition, as of May 31, 2011, the Fund had reverse repurchase agreements outstanding representing Financial Leverage equal to approximately 17.8% of the Fund’s Managed Assets. As of May 31, 2011, the Fund’s total Financial Leverage represented approximately 30.1% of the Fund’s Managed Assets.

So long as the net rate of return on the Fund’s investments purchased with the proceeds of Financial Leverage exceeds the cost of such Financial Leverage, such excess amounts will be available to pay higher distributions to holders of the Fund’s Common Shares. Any use of Financial Leverage must be approved by the Fund’s Board of Trustees. In connection with the Fund’s use of Financial Leverage, the Fund may seek to hedge the interest rate risks associated with the Financial Leverage through interest rate swaps, caps or other derivative transactions. There can be no assurance that the Fund’s Financial Leverage strategy will be successful during any period during which it is employed. The Fund may also seek to enhance the level of its current distributions by lending its portfolio securities to broker- dealers or financial institutions. See “Use of Financial Leverage” and “Risks—Financial Leverage Risk” and “Investment Objective and Policies—Investment Practices—Loans of Portfolio Securities.”

Other Investment Practices

Temporary Defensive Investments. At any time when a temporary defensive posture is believed by the Sub-Adviser to be warranted (a “temporary defensive period”), the Fund may, without limitation, hold cash or invest its assets in money market instruments and repurchase agreements in respect of those instruments. The Fund may not achieve its investment objective during a temporary defensive period or be able to sustain its historical distribution levels. See “Investment Objective and Policies—Temporary Defensive Investments.”

Management of the Fund

Guggenheim Funds Investment Advisors, LLC acts as the Fund's Investment Adviser pursuant to an advisory agreement with the Fund

(the “Advisory Agreement”). Pursuant to the Advisory Agreement, the Investment Adviser is responsible for the management of the Fund and administers the affairs of the Fund to the extent requested by the Board of Trustees. As compensation for its services, the Fund pays the Investment Adviser a fee, payable monthly, in an annual amount equal to 1.00% of the Fund’s average daily Managed Assets. “Managed Assets” means the total assets of the Fund, including the assets attributable to the proceeds from any borrowings or other forms of Financial Leverage, minus liabilities, other than liabilities related to any Financial Leverage.

Guggenheim Partners Asset Management, LLC acts as the Fund’s Sub-Adviser pursuant to a sub-advisory agreement with the Fund and the Investment Adviser (the “Sub-Advisory Agreement”). Pursuant to the Sub-Advisory Agreement, the Sub-Adviser is responsible for the management of the Fund’s portfolio of securities. As compensation for its services, the Investment Adviser pays the Sub-Adviser a fee, payable monthly, in a maximum annual amount equal to 0.50% of the Fund’s average daily Managed Assets.

Each of the Investment Adviser and the Sub-Adviser are wholly-owned subsidiaries of Guggenheim Partners.

Distributions

The Fund intends to pay substantially all of its net investment income to Common Shareholders through monthly distributions. In addition, the Fund intends to distribute any net long-term capital gains to Common Shareholders as long-term capital gain dividends at least annually. The Fund expects that dividends paid on the Common Shares will consist of (i) investment company taxable income, which includes, among other things, ordinary income, short-term capital gain (for example, premiums earned in connection with the Fund’s covered call option strategy) and income from certain hedging and interest rate transactions, (ii) qualified dividend income and (iii) long-term capital gain (gain from the sale of a capital asset held longer than one year). To the extent the Fund receives dividends with respect to its investments in Common Equity Securities that consist of qualified dividend income (income from domestic and certain foreign corporations), a portion of the Fund’s distributions to its Common Shareholders may consist of qualified dividend income. The Fund cannot assure you, however, as to what percentage of the dividends paid on the Common Shares, if any, will consist of qualified dividend income or long-term capital gains, which are taxed at lower rates for individuals than ordinary income. See “Distributions.”

If you hold your Common Shares in your own name or if you hold your Common Shares with a brokerage firm that participates in the Fund’s Dividend Reinvestment Plan (the “Plan”), unless you elect to receive cash, all dividends and distributions that are declared by the Fund will be automatically reinvested in additional Common Shares of the Fund pursuant to the Plan. If you hold your Common Shares with a brokerage firm that does not participate in the Plan, you will not be able to participate in the Plan and any dividend reinvestment may be effected on different terms than those

described above. Consult your financial adviser for more information. See
“Dividend Reinvestment Plan.”

Listing and Symbol	<p>The Fund's currently outstanding Common Shares are, and the Common Shares offered in this Prospectus will be, listed on the New York Stock Exchange (the "NYSE") under the symbol "GOF."</p>
Special Risk Considerations	<p>Not a Complete Investment Program. An investment in the Common Shares of the Fund should not be considered a complete investment program. The Fund is intended for long-term investors seeking current income and capital appreciation. The Fund is not meant to provide a vehicle for those who wish to play short-term swings in the stock market. Each Common Shareholder should take into account the Fund's investment objective as well as the Common Shareholder's other investments when considering an investment in the Fund.</p> <p>Investment and Market Risk. An investment in Common Shares of the Fund is subject to investment risk, including the possible loss of the entire principal amount that you invest. An investment in the Common Shares of the Fund represents an indirect investment in the securities owned by the Fund. The value of those securities may fluctuate, sometimes rapidly and unpredictably. The value of the securities owned by the Fund will affect the value of the Common Shares. At any point in time, your Common Shares may be worth less than your original investment, including the reinvestment of Fund dividends and distributions.</p> <p>Management Risk. The Fund is subject to management risk because it has an actively managed portfolio. The Sub-Adviser will apply investment techniques and risk analysis in making investment decisions for the Fund, but there can be no guarantee that these will produce the desired results.</p> <p>Income Risk. The income investors receive from the Fund is based primarily on the interest it earns from its investments in Income Securities, which can vary widely over the short- and long-term. If prevailing market interest rates drop, investors' income from the Fund could drop as well. The Fund's income could also be affected adversely when prevailing short-term interest rates increase and the Fund is utilizing leverage, although this risk is mitigated to the extent the Fund's investments include floating-rate obligations.</p> <p>Dividend Risk. Dividends on common stock and other Common Equity Securities which the Fund may hold are not fixed but are declared at the discretion of an issuer's board of directors. There is no guarantee that the issuers of the Common Equity Securities in which the Fund invests will declare dividends in the future or that, if declared, they will remain at current levels or increase over time.</p> <p>Income Securities Risk. In addition to the risks discussed above, Income Securities, including high-yield bonds, are subject to certain risks, including:</p> <p>Issuer Risk. The value of Income Securities may decline for a number of reasons which directly relate to the issuer, such as management performance, financial leverage and reduced demand for the issuer's goods and services.</p>

Credit Risk. Credit risk is the risk that one or more debt obligations in the Fund's portfolio will decline in price, or fail to pay interest or

principal when due, because the issuer of the obligation experiences a decline in its financial status.

Interest Rate Risk. Interest rate risk is the risk that Income Securities will decline in value because of changes in market interest rates. When market interest rates rise, the market value of Income Securities generally will fall.

Reinvestment Risk. Reinvestment risk is the risk that income from the Fund's portfolio will decline if the Fund invests the proceeds from matured, traded or called Income Securities at market interest rates that are below the Fund portfolio's current earnings rate. A decline in income could affect the Common Shares' market price or the overall return of the Fund.

Prepayment Risk. During periods of declining interest rates, borrowers may exercise their option to prepay principal earlier than scheduled, forcing the Fund to reinvest in lower yielding securities. This is known as call or prepayment risk.

Liquidity Risk. The Fund may invest without limitation in Income Securities for which there is no readily available trading market or which are otherwise illiquid, including certain high-yield bonds. The Fund may not be able to readily dispose of illiquid securities and obligations at prices that approximate those at which the Fund could sell such securities and obligations if they were more widely traded and, as a result of such illiquidity, the Fund may have to sell other investments or engage in borrowing transactions if necessary to raise cash to meet its obligations. In addition, limited liquidity could affect the market price of Income Securities, thereby adversely affecting the Fund's net asset value and ability to make distributions.

Valuation of Certain Income Securities. The Sub-Adviser normally uses an independent pricing service to value most Income Securities held by the Fund. Because the secondary markets for certain investments may be limited, they may be difficult to value. Where market quotations are not readily available, valuation may require more research than for more liquid investments. In addition, elements of judgment may play a greater role in valuation in such cases than for investments with a more active secondary market because there is less reliable objective data available.

Duration and Maturity Risk. The Fund has no set policy regarding portfolio maturity or duration. Holding long duration and long maturity investments will expose the Fund to certain magnified risks. These risks include interest rate risk, credit risk and liquidity risks as discussed above.

Below-Investment Grade Securities Risk. The Fund may invest in Income Securities rated below-investment grade or, if unrated, determined by the Sub-Adviser to be of comparable credit quality, which are commonly referred to as "high-yield" or "junk" bonds. Investment in securities of below-investment grade quality involves substantial risk of loss. Income

Securities of below-investment grade quality are predominantly speculative with respect to the issuer's capacity to pay interest and repay principal when due and therefore

involve a greater risk of default or decline in market value due to adverse economic and issuer-specific developments. Income Securities of below-investment grade quality display increased price sensitivity to changing interest rates and to a deteriorating economic environment. The market values for Income Securities of below-investment grade quality tend to be more volatile and such securities tend to be less liquid than investment grade debt securities.

Structured Finance Investments Risk. The Fund's structured finance investments may include residential and commercial mortgage-related and other asset-backed securities issued by governmental entities and private issuers. Holders of structured finance investments bear risks of the underlying investments, index or reference obligation and are subject to counterparty risk. The Fund may have the right to receive payments only from the structured product, and generally does not have direct rights against the issuer or the entity that sold the assets to be securitized. While certain structured finance investments enable the investor to acquire interests in a pool of securities without the brokerage and other expenses associated with directly holding the same securities, investors in structured finance investments generally pay their share of the structured product's administrative and other expenses. Although it is difficult to predict whether the prices of indices and securities underlying structured finance investments will rise or fall, these prices (and, therefore, the prices of structured finance investments) will be influenced by the same types of political and economic events that affect issuers of securities and capital markets generally. If the issuer of a structured product uses shorter term financing to purchase longer term securities, the issuer may be forced to sell its securities at below market prices if it experiences difficulty in obtaining short-term financing, which may adversely affect the value of the structured finance investment owned by the Fund.

The Fund may invest in structured finance products collateralized by low grade or defaulted loans or securities. Investments in such structured finance products are subject to the risks associated with below investment grade securities. Such securities are characterized by high risk. It is likely that an economic recession could severely disrupt the market for such securities and may have an adverse impact on the value of such securities.

Mortgage-Backed Securities Risk. The risks associated with mortgage-backed securities include: (1) credit risk associated with the performance of the underlying mortgage properties and of the borrowers owning these properties; (2) adverse changes in economic conditions and circumstances, which are more likely to have an adverse impact on mortgage-backed securities secured by loans on certain types of commercial properties than on those secured by loans on residential properties; (3) prepayment risk, which can lead to significant fluctuations in the value of the mortgage-backed security; (4) loss of all or part of the premium, if any, paid; and (5) decline in the market value of the security, whether resulting from changes in interest rates, prepayments on the underlying mortgage collateral or perceptions of

the credit risk associated with the underlying mortgage collateral.

Mortgage-backed securities represent an interest in a pool of mortgages. When market interest rates decline, more mortgages are refinanced and the securities are paid off earlier than expected. Prepayments may also occur on a scheduled basis or due to foreclosure. When market interest rates increase, the market values of mortgage-backed securities decline. At the same time, however, mortgage refinancings and prepayments slow, which lengthens the effective maturities of these securities. As a result, the negative effect of the rate increase on the market value of mortgage-backed securities is usually more pronounced than it is for other types of debt securities. In addition, due to increased instability in the credit markets, the market for some mortgage-backed securities has experienced reduced liquidity and greater volatility with respect to the value of such securities, making it more difficult to value such securities. The Fund may invest in sub-prime mortgages or mortgage-backed securities that are backed by sub-prime mortgages.

Moreover, the relationship between prepayments and interest rates may give some high-yielding mortgage-related and asset-backed securities less potential for growth in value than conventional bonds with comparable maturities. In addition, in periods of falling interest rates, the rate of prepayments tends to increase. During such periods, the reinvestment of prepayment proceeds by the Fund will generally be at lower rates than the rates that were carried by the obligations that have been prepaid. Because of these and other reasons, mortgage-related and asset-backed security's total return and maturity may be difficult to predict precisely. To the extent that the Fund purchases mortgage-related and asset-backed securities at a premium, prepayments (which may be made without penalty) may result in loss of the Fund's principal investment to the extent of premium paid.

Mortgage-backed securities generally are classified as either commercial mortgage-backed securities ("CMBS") or residential mortgage-backed securities ("RMBS"), each of which are subject to certain specific risks.

Commercial Mortgage-Backed Securities Risk. The market for CMBS developed more recently and, in terms of total outstanding principal amount of issues, is relatively small compared to the market for residential single-family mortgage-related securities. CMBS are subject to particular risks, including lack of standardized terms, shorter maturities than residential mortgage loans and payment of all or substantially all of the principal only at maturity rather than regular amortization of principal. In addition, commercial lending generally is viewed as exposing the lender to a greater risk of loss than one-to-four family residential lending. Commercial lending, for example, typically involves larger loans to single borrowers or groups of related borrowers than residential one-to-four family mortgage loans. In addition, the repayment of loans secured by income producing properties typically is dependent upon the successful operation of the related real estate project and the cash flow generated therefrom. Net operating income of an income-producing property can be affected by, among other things: tenant mix, success of tenant businesses, property management decisions, property

location and condition, competition

12

from comparable types of properties, changes in laws that increase operating expense or limit rents that may be charged, any need to address environmental contamination at the property, the occurrence of any uninsured casualty at the property, changes in national, regional or local economic conditions and/or specific industry segments, declines in regional or local real estate values, declines in regional or local rental or occupancy rates, increases in interest rates, real estate tax rates and other operating expenses, change in governmental rules, regulations and fiscal policies, including environmental legislation, acts of God, terrorism, social unrest and civil disturbances.

Consequently, adverse changes in economic conditions and circumstances are more likely to have an adverse impact on mortgage-related securities secured by loans on commercial properties than on those secured by loans on residential properties. Additional risks may be presented by the type and use of a particular commercial property. Special risks are presented by hospitals, nursing homes, hospitality properties and certain other property types. Commercial property values and net operating income are subject to volatility, which may result in net operating income becoming insufficient to cover debt service on the related mortgage loan. The exercise of remedies and successful realization of liquidation proceeds relating to CMBS may be highly dependent on the performance of the servicer or special servicer. There may be a limited number of special servicers available, particularly those that do not have conflicts of interest.

Residential Mortgage-Backed Securities Risk. Credit-related risk on RMBS arises from losses due to delinquencies and defaults by the borrowers in payments on the underlying mortgage loans and breaches by originators and servicers of their obligations under the underlying documentation pursuant to which the RMBS are issued. The rate of delinquencies and defaults on residential mortgage loans and the aggregate amount of the resulting losses will be affected by a number of factors, including general economic conditions, particularly those in the area where the related mortgaged property is located, the level of the borrower's equity in the mortgaged property and the individual financial circumstances of the borrower. If a residential mortgage loan is in default, foreclosure on the related residential property may be a lengthy and difficult process involving significant legal and other expenses. The net proceeds obtained by the holder on a residential mortgage loan following the foreclosure on the related property may be less than the total amount that remains due on the loan. The prospect of incurring a loss upon the foreclosure of the related property may lead the holder of the residential mortgage loan to restructure the residential mortgage loan or otherwise delay the foreclosure process.

Sub-Prime Mortgage Market Risk. The residential mortgage market in the United States has experienced difficulties that may adversely affect the performance and market value of certain mortgages and mortgage-related securities. Delinquencies and losses on residential mortgage loans (especially sub-prime and second-line mortgage loans) generally have increased recently and may continue to increase, and a decline in or

flattening of housing values (as has recently been experienced and may

continue to be experienced in many housing markets) may exacerbate such delinquencies and losses. Borrowers with adjustable rate mortgage loans are more sensitive to changes in interest rates, which affect their monthly mortgage payments, and may be unable to secure replacement mortgages at comparably low interest rates. Also, a number of residential mortgage loan originators have recently experienced serious financial difficulties or bankruptcy. Largely due to the foregoing, reduced investor demand for mortgage loans and mortgage-related securities and increased investor yield requirements have caused limited liquidity in the secondary market for mortgage-related securities, which can adversely affect the market value of mortgage-related securities. It is possible that such limited liquidity in such secondary markets could continue or worsen. If the economy of the United States deteriorates further, the incidence of mortgage foreclosures, especially sub-prime mortgages, may increase, which may adversely affect the value of any mortgage-backed securities owned by the Fund.

The significance of the mortgage crisis and loan defaults in residential mortgage loan sectors led to the enactment in July 2008 of the Housing and Economic Recovery Act of 2008, a wide-ranging housing rescue bill that offers up to \$300 billion in assistance to troubled homeowners and emergency assistance to Freddie Mac and Fannie Mae, companies that operate under federal charter and play a vital role in providing financing for the housing markets. The above-mentioned housing bill could potentially have a material adverse effect on the Funds' investment as the bill, among other things, (1) allows approximately 400,000 homeowners to refinance into affordable, government-backed loans through a program run by the Federal Housing Authority ("FHA"), a division of the U.S. Housing and Urban Development ("HUD") and (2) provides approximately \$180 million for "pre-foreclosure" housing counseling and legal services for distressed borrowers. In addition, the mortgage crisis has led public advocacy groups to demand, and governmental officials to propose and consider, a variety of other "bailout" and "rescue" plans that could potentially have a material adverse effect on the Funds' investments. Certain borrowers may also seek relief through the "FHA Secure" refinancing option that gives homeowners with non-FHA adjustable rate mortgages, current or delinquent and regardless of reset status, the ability to refinance into a FHA-insured mortgage. The Helping Families Save Their Homes Act of 2009, which was enacted on May 20, 2009, provides a safe harbor for servicers entering into "qualified loss mitigation plans" with respect to residential mortgages originated before the act was enacted. By protecting servicers from certain liabilities, this safe harbor may encourage loan modifications and reduce the likelihood that investors in securitizations will be paid on a timely basis or will be paid in full. In addition to the above, a variety of other plans and proposals from federal and state regulatory agencies have been presented. Law, legislation or other government regulation, promulgated in furtherance of a "bailout" or "rescue" plan to address the crisis and distress in the residential mortgage loan sector, may result in a reduction of available transactional opportunities for the Fund, or an increase in the cost associated with such transactions. Any

such law, legislation or regulation may adversely affect the market value of non-agency RMBS.

A number of originators and servicers of residential and commercial mortgage loans, including some of the largest originators and servicers in the residential and commercial mortgage loan market, have experienced serious financial difficulties, including some that are now subject to federal insolvency proceedings. Such difficulties may affect the performance of non-agency RMBS and CMBS backed by mortgage loans. There can be no assurance that originators and servicers of mortgage loans will not continue to experience serious financial difficulties or experience such difficulties in the future, including becoming subject to bankruptcy or insolvency proceedings, or that underwriting procedures and policies and protections against fraud will be sufficient in the future to prevent such financial difficulties or significant levels of default or delinquency on mortgage loans.

Asset-Backed Securities Risk. ABS involve certain risks in addition to those presented by mortgage-backed securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be available to support payments on these securities. ABS do not have the benefit of the same security interest in the underlying collateral as mortgage-backed securities and are more dependent on the borrower's ability to pay and may provide the Fund with a less effective security interest in the related collateral than do mortgage-related securities. The collateral underlying ABS may constitute assets related to a wide range of industries and sectors. The collateral underlying ABS may constitute assets related to a wide range of industries and sectors. For example, ABS can be collateralized with credit card and automobile receivables. Credit card receivables are generally unsecured, and the debtors are entitled to the protection of a number of state and federal consumer credit laws, many of which give debtors the right to set off certain amounts owed on the credit cards, thereby reducing the balance due. Most issuers of automobile receivables permit the servicers to retain possession of the underlying obligations. If the servicer were to sell these obligations to another party, there is a risk that the purchaser would acquire an interest superior to that of the holders of the related automobile receivables. In addition, because of the large number of vehicles involved in a typical issuance and technical requirements under state laws, the trustee for the holders of the automobile receivables may not have an effective security interest in all of the obligations backing such receivables. If the economy of the United States deteriorates, defaults on securities backed by credit card, automobile and other receivables may increase, which may adversely affect the value of any ABS owned by the Fund. In addition, these securities may provide the Fund with a less effective security interest in the related collateral than do mortgage-related securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be available to support payments on these securities.

The Credit CARD Act of 2009 imposes new regulations on the ability of credit card issuers to adjust the interest rates and exercise various

other rights with respect to indebtedness extended through credit cards. The Fund and the Sub-Adviser cannot predict what effect, if any, such regulations might have on the market for ABS and such regulations may adversely affect the value of ABS owned by the Fund.

The United States automobile manufacturers have recently reported reduced sales and the potential inability to meet their financing needs. As a result, certain automobile manufacturers have been granted access to emergency loans from the U.S. Government and have experienced bankruptcy. As a result of these events, the value of securities backed by receivables from the sale or lease of automobiles may be adversely affected.

Risks Associated with CDOs. The credit quality of CDO securities depends primarily upon the quality of the underlying assets and the level of credit support and/or enhancement provided. The underlying assets (e.g., debt obligations) of a CDO are subject to prepayments, which shorten the weighted average maturity and may lower the return of the securities issued by the CDO. If the credit support or enhancement is exhausted, losses or delays in payment may result if the required payments of principal and interest are not made. The value of CDO securities also may change because of changes in market value, that is changes in the market's perception of the creditworthiness of the servicing agent for the pool, the originator of the pool, or the financial institution or fund providing the credit support or enhancement.

Risks Associated with Risk-Linked Securities. RLS are a form of derivative issued by insurance companies and insurance-related special purpose vehicles that apply securitization techniques to catastrophic property and casualty damages. Unlike other insurable low-severity, high-probability events (such as auto collision coverage), the insurance risk of which can be diversified by writing large numbers of similar policies, the holders of a typical RLS are exposed to the risks from high-severity, low-probability events such as that posed by major earthquakes or hurricanes. RLS represent a method of reinsurance, by which insurance companies transfer their own portfolio risk to other reinsurance companies and, in the case of RLS, to the capital markets. A typical RLS provides for income and return of capital similar to other fixed-income investments, but involves full or partial default if losses resulting from a certain catastrophe exceeded a predetermined amount. In essence, investors invest funds in RLS and if a catastrophe occurs that "triggers" the RLS, investors may lose some or all of the capital invested. In the case of an event, the funds are paid to the bond sponsor — an insurer, reinsurer or corporation — to cover losses. In return, the bond sponsors pay interest to investors for this catastrophe protection. RLS can be structured to pay-off on three types of variables—insurance-industry catastrophe loss indices, insure-specific catastrophe losses and parametric indices based on the physical characteristics of catastrophic events. Such variables are difficult to predict or model, and the risk and potential return profiles of RLS may be difficult to assess. Catastrophe-related RLS have been in use since the 1990s, and the securitization and risk-transfer aspects of such RLS are

beginning to be employed in other insurance and risk-related areas.

The RLS market is thus in the early stages of development. No active trading market may exist for certain RLS, which may impair the ability of the Fund to realize full value in the event of the need to liquidate such assets.

Risks Associated with Structured Notes. Investments in structured notes involve risks, including credit risk and market risk. Where the Fund's investments in structured notes are based upon the movement of one or more factors, including currency exchange rates, interest rates, referenced bonds and stock indices, depending on the factor used and the use of multipliers or deflators, changes in interest rates and movement of the factor may cause significant price fluctuations. Additionally, changes in the reference instrument or security may cause the interest rate on the structured note to be reduced to zero, and any further changes in the reference instrument may then reduce the principal amount payable on maturity. Structured notes may be less liquid than other types of securities and more volatile than the reference instrument or security underlying the note.

Senior Loans Risk. The Fund may invest in senior secured floating rate Loans made to corporations and other non-governmental entities and issuers ("Senior Loans"). Senior Loans typically hold the most senior position in the capital structure of the issuing entity, are typically secured with specific collateral and typically have a claim on the assets and/or stock of the borrower that is senior to that held by subordinated debt holders and stockholders of the borrower. The Fund's investments in Senior Loans are typically below-investment grade and are considered speculative because of the credit risk of their issuers. The risks associated with Senior Loans of below-investment grade quality are similar to the risks of other lower grade Income Securities, although Senior Loans are typically senior and secured in contrast to subordinated and unsecured Income Securities. Senior Loans' higher standing has historically resulted in generally higher recoveries in the event of a corporate reorganization. In addition, because their interest payments are adjusted for changes in short-term interest rates, investments in Senior Loans generally have less interest rate risk than other lower grade Income Securities, which may have fixed interest rates.

Second Lien Loans Risk. The Fund may invest in "second lien" secured floating rate Loans made by public and private corporations and other non-governmental entities and issuers for a variety of purposes ("Second Lien Loans"). Second Lien Loans are second in right of payment to one or more Senior Loans of the related borrower. Second Lien Loans are subject to the same risks associated with investment in Senior Loans and other lower grade Income Securities. However, Second Lien Loans are second in right of payment to Senior Loans and therefore are subject to the additional risk that the cash flow of the borrower and any property securing the Loan may be insufficient to meet scheduled payments after giving effect to the senior secured obligations of the borrower. Second Lien Loans are expected to have greater price volatility and exposure to losses upon default than Senior Loans and may be less liquid.

Mezzanine Investments Risk. The Fund may invest in certain lower grade securities known as “Mezzanine Investments,” which are subordinated debt securities that are generally issued in private placements in connection with an equity security (e.g., with attached warrants) or may be convertible into equity securities. Mezzanine Investments are subject to the same risks associated with investment in Senior Loans, Second Lien Loans and other lower grade Income Securities. However, Mezzanine Investments may rank lower in right of payment than any outstanding Senior Loans and Second Lien Loans of the borrower, or may be unsecured (i.e., not backed by a security interest in any specific collateral), and are subject to the additional risk that the cash flow of the borrower and available assets may be insufficient to meet scheduled payments after giving effect to any higher ranking obligations of the borrower. Mezzanine Investments are expected to have greater price volatility and exposure to losses upon default than Senior Loans and Second Lien Loans and may be less liquid.

Convertible Securities Risk. The Fund may invest in convertible securities, which include bonds, debentures, notes, preferred stocks and other securities that entitle the holder to acquire common stock or other equity securities of the same or a different issuer. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality. As with all Income Securities, the market values of convertible securities tend to decline as interest rates increase and, conversely, to increase as interest rates decline. Convertible securities also tend to reflect the market price of the underlying stock in varying degrees, depending on the relationship of such market price to the conversion price in the terms of the convertible security. Convertible securities rank senior to common stock in an issuer’s capital structure and consequently entail less risk than the issuer’s common stock.

Preferred Stock Risks. The Fund may invest in preferred stock, which represents the senior residual interest in the assets of an issuer after meeting all claims, with priority to corporate income and liquidation payments over the issuer’s common stock. As such, preferred stock is inherently more risky than the bonds and other debt instruments of the issuer, but less risky than its common stock. Preferred stocks may be significantly less liquid than many other securities, such as U.S. Government securities, corporate debt and common stock.

Foreign Securities Risk. The Fund may invest up to 20% of its total assets in non-U.S. dollar-denominated Income Securities of foreign issuers. Investing in foreign issuers may involve certain risks not typically associated with investing in securities of U.S. issuers due to increased exposure to foreign economic, political and legal developments, including favorable or unfavorable changes in currency exchange rates, exchange control regulations (including currency blockage), expropriation or nationalization of assets, imposition of withholding taxes on payments, and possible difficulty in obtaining and enforcing judgments against foreign entities. Furthermore, issuers of foreign securities and obligations are subject to

different, often less comprehensive, accounting, reporting and disclosure requirements than domestic issuers. The securities and obligations of some foreign

companies and foreign markets are less liquid and at times more volatile than comparable U.S. securities, obligations and markets. These risks may be more pronounced to the extent that the Fund invests a significant amount of its assets in companies located in one region and to the extent that the Fund invests in securities of issuers in emerging markets. The Fund may also invest in U.S. dollar- denominated Income Securities of foreign issuers, which are subject to many of the risks described above regarding Income Securities of foreign issuers denominated in foreign currencies.

Emerging Markets Risk. The Fund may invest up to 10% of its total assets in Income Securities the issuers of which are located in countries considered to be emerging markets, and investments in such securities are considered speculative. Heightened risks of investing in emerging markets include: smaller market capitalization of securities markets, which may suffer periods of relative illiquidity; significant price volatility; restrictions on foreign investment; and potential restrictions on repatriation of investment income and capital.

Foreign Currency Risk. The value of securities denominated or quoted in foreign currencies may be adversely affected by fluctuations in the relative currency exchange rates and by exchange control regulations. The Fund's investment performance may be negatively affected by a devaluation of a currency in which the Fund's investments are denominated or quoted. Further, the Fund's investment performance may be significantly affected, either positively or negatively, by currency exchange rates because the U.S. dollar value of securities denominated or quoted in another currency will increase or decrease in response to changes in the value of such currency in relation to the U.S. dollar.

Common Equity Securities Risk. The Fund may invest up to 50% of its total assets in Common Equity Securities. Common Equity Securities' prices fluctuate for a number of reasons, including changes in investors' perceptions of the financial condition of an issuer, the general condition of the relevant stock market and broader domestic and international political and economic events. The prices of Common Equity Securities are also sensitive to general movements in the stock market, so a drop in the stock market may depress the prices of Common Equity Securities to which the Fund has exposure. While broad market measures of Common Equity Securities have historically generated higher average returns than Income Securities, Common Equity Securities have also experienced significantly more volatility in those returns. Common Equity Securities in which the Fund may invest are structurally subordinated to preferred stock, bonds and other debt instruments in a company's capital structure in terms of priority to corporate income and are therefore inherently more risky than preferred stock or debt instruments of such issuers.

Risks Associated with the Fund's Covered Call Option Strategy. The ability of the Fund to achieve its investment objective is partially dependent on the successful implementation of its covered call option strategy. There are

significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives.

A decision as to whether, when and how to use options involves the exercise of skill and judgment, and even a well conceived transaction may be unsuccessful to some degree because of market behavior or unexpected events.

As the writer of a covered call option, the Fund forgoes, during the option's life, the opportunity to profit from increases in the market value of the security covering the call option above the sum of the premium and the strike price of the call, but retains the risk of loss should the price of the underlying security decline. As the Fund writes covered calls over more of its portfolio, its ability to benefit from capital appreciation becomes more limited. See "Risks—Risks Associated with the Fund's Covered Call Option Strategy—Risks Associated with Covered Call and Put Options."

With respect to exchange-traded options, there can be no assurance that a liquid market will exist when the Fund seeks to close out an option position on an options exchange. If the Fund were unable to close out a covered call option that it had written on a security, it would not be able to sell the underlying security unless the option expired without exercise. See "Risks—Risks Associated with the Fund's Covered Call Option Strategy—Exchange-Listed Option Risk."

The Fund may also write (sell) over-the-counter options ("OTC options"). Options written by the Fund with respect to non-U.S. securities, indices or sectors generally will be OTC options. OTC options differ from exchange-listed options in that they are two-party contracts, with exercise price, premium and other terms negotiated between buyer and seller, and generally do not have as much market liquidity as exchange-listed options. See "Risks—Risks Associated with the Fund's Covered Call Option Strategy—OTC Option Risk."

Risks of Real Property Asset Companies. The Fund may invest in Income Securities and Common Equity Securities issued by Real Property Asset Companies. Because of the Fund's ability to make indirect investments in real estate and in the securities of companies in the real estate industry, it is subject to risks associated with the direct ownership of real estate, including declines in the value of real estate; general and local economic conditions; increased competition; and changes in interest rates. Because of the Fund's ability to make indirect investments in natural resources and physical commodities, and in Real Property Asset Companies engaged in oil and gas exploration and production, gold and other precious metals, steel and iron ore production, energy services, forest products, chemicals, coal, alternative energy sources and environmental services, as well as related transportation companies and equipment manufacturers, the Fund is subject to risks associated with such real property assets, including supply and demand risk, depletion risk, regulatory risk and commodity pricing risk.

Risks of Personal Property Asset Companies. The Fund may invest in Income Securities and Common Equity Securities issued by Personal

Property Asset Companies which invest in personal property such as special situation transportation assets (e.g., railcars, airplanes and ships) and collectibles (e.g., antiques, wine and fine art). The risks of

special situation transportation assets include cyclical supply and demand for transportation assets and risk of decline in the value of transportation assets and rental values. The risks of collectible assets include the difficulty in valuing collectible assets, the relative illiquidity of collectible assets, the prospects of forgery or the inability to assess the authenticity of collectible assets and the high transaction and related costs of purchasing, selling and safekeeping collectible assets.

Private Securities Risk. The Fund may invest in privately issued Income Securities and Common Equity Securities of both public and private companies. Private Securities have additional risk considerations than investments in comparable public investments. Whenever the Fund invests in companies that do not publicly report financial and other material information, it assumes a greater degree of investment risk and reliance upon the Sub-Adviser's ability to obtain and evaluate applicable information concerning such companies' creditworthiness and other investment considerations. Certain Private Securities may be illiquid. Because there is often no readily available trading market for Private Securities, the Fund may not be able to readily dispose of such investments at prices that approximate those at which the Fund could sell them if they were more widely traded. Private Securities are also more difficult to value. Private Securities that are debt securities generally are of below-investment grade quality, frequently are unrated and present many of the same risks as investing in below-investment grade public debt securities.

Investment Funds Risk. As an alternative to holding investments directly, the Fund may also obtain investment exposure to Income Securities and Common Equity Securities by investing up to 20% of its total assets in Investment Funds, of which amount up to 10% of its total assets may be invested in Registered Investment Funds. Investments in Investment Funds present certain special considerations and risks not present in making direct investments in Income Securities and Common Equity Securities. Investments in Investment Funds involve operating expenses and fees that are in addition to the expenses and fees borne by the Fund. Such expenses and fees attributable to the Fund's investment in another Investment Fund are borne indirectly by Common Shareholders. Accordingly, investment in such entities involves expense and fee layering. To the extent management fees of Investment Funds are based on total gross assets, it may create an incentive for such entities' managers to employ financial leverage, thereby adding additional expense and increasing volatility and risk. A performance-based fee arrangement may create incentives for an adviser or manager to take greater investment risks in the hope of earning a higher profit participation. Investments in Investment Funds frequently expose the Fund to an additional layer of financial leverage.

Private Investment Funds Risk. In addition to those risks described above with respect to all Investment Funds, investing in Private Investment Funds may pose additional risks to the Fund. Certain Private Investment Funds in which the Fund participates may involve capital call provisions under which

the Fund is obligated to make

21

additional investments at specified levels even if it would otherwise choose not to. Investments in Private Investment Funds may have very limited liquidity. Often there will be no secondary market for such investments and the ability to redeem or otherwise withdraw from a Private Investment Fund may be prohibited during the term of the Private Investment Fund or, if permitted, may be infrequent. Certain Private Investment Funds may be subject to “lock-up” periods of a year or more. The valuation of investments in Private Investment Funds often will be based upon valuations provided by the adviser or manager and it may not always be possible to effectively assess the accuracy of such valuations, particularly if the fund holds substantial investments the values of which are determined by the adviser or manager based upon a fair valuation methodology. Incentive fee considerations, which are generally expected to be between 15%-25% of the net capital appreciation (if any) in the assets managed by a Private Investment Fund manager, may cause conflicts in the fair valuation of investment holdings by a Private Investment Fund’s adviser or manager.

Private Investment Funds in which the Fund invests may employ a number of investment techniques, including short sales, investment in non-investment grade or nonmarketable securities, uncovered option transactions, forward transactions, futures and options on futures transactions, foreign currency transactions and highly concentrated portfolios, among others, which could, under certain circumstances, magnify the impact of any negative market, sector or investment development. The Fund may be exposed to increased leverage risk, as the Private Investment Funds in which it invests may borrow and may utilize various lines of credit, reverse repurchase agreements, “dollar” rolls, issuance of debt securities, swaps, forward purchases and other forms of leverage. Some of the Private Investment Funds may provide very limited information with respect to their operation and performance to the Fund, thereby severely limiting the Fund’s ability to verify initially or on a continuing basis any representations made by the Private Investment Funds or the investment strategies being employed, and exposing the Fund to concentration risk if it invests in a number of Private Investment Funds which have overlapping strategies and accumulate large positions in the same or related instruments without the Sub-Adviser’s knowledge. The Fund will not have the ability to direct or influence the management of the Private Investment Funds in which it invests, so the returns on such investments will primarily depend on the performance of the Private Investment Funds’ managers and could suffer substantial adverse effects by the unfavorable performance of such managers.

Synthetic Investments Risk. The Fund may be exposed to certain additional risks to the extent the Sub-Adviser uses derivatives as a means to synthetically implement the Fund’s investment strategies. If the Fund enters into a derivative instrument whereby it agrees to receive the return of a security or financial instrument or a basket of securities or financial instruments, it will typically contract to receive such returns for a predetermined period of time. During such period, the Fund may not have

the ability to increase or decrease its exposure. In addition, such customized derivative instruments will likely be

highly illiquid, and it is possible that the Fund will not be able to terminate such derivative instruments prior to their expiration date or that the penalties associated with such a termination might impact the Fund's performance in a material adverse manner. Furthermore, derivative instruments typically contain provisions giving the counterparty the right to terminate the contract upon the occurrence of certain events. If a termination were to occur, the Fund's return could be adversely affected as it would lose the benefit of the indirect exposure to the reference securities and it may incur significant termination expenses.

Inflation/Deflation Risk. Inflation risk is the risk that the value of assets or income from investments will be worth less in the future as inflation decreases the value of money. As inflation increases, the real value of the Common Shares and distributions can decline. In addition, during any periods of rising inflation, the dividend rates or borrowing costs associated with the Fund's use of Financial Leverage would likely increase, which would tend to further reduce returns to Common Shareholders. Deflation risk is the risk that prices throughout the economy decline over time—the opposite of inflation. Deflation may have an adverse affect on the creditworthiness of issuers and may make issuer default more likely, which may result in a decline in the value of the Fund's portfolio.

Market Discount Risk. The Fund's Common Shares have a limited trading history and have traded both at a premium and at a discount in relation to NAV. The Fund cannot predict whether the Common Shares will trade in the future at a premium or discount to NAV. The Fund's Common Shares have recently traded at a premium to NAV per share, which may not be sustainable. If the Common Shares are trading at a premium to net asset value at the time you purchase Common Shares, the NAV per share of the Common Shares purchased will be less than the purchase price paid. Shares of closed-end investment companies frequently trade at a discount from NAV, but in some cases have traded above NAV. The risk of the Common Shares trading at a discount is a risk separate from the risk of a decline in the Fund's NAV as a result of the Fund's investment activities. The Fund's NAV will be reduced immediately following an offering of the Common Shares due to the costs of such offering, which will be borne entirely by the Fund. The sale of Common Shares by the Fund (or the perception that such sales may occur) may have an adverse effect on prices of Common Shares in the secondary market. An increase in the number of Common Shares available may put downward pressure on the market price for Common Shares. The Fund may, from time to time, seek the consent of Common Shareholders to permit the issuance and sale by the Fund of Common Shares at a price below the Fund's then current NAV, subject to certain conditions, and such sales of Common Shares at price below NAV, if any, may increase downward pressure on the market price for Common Shares. These sales, if any, also might make it more difficult for the Fund to sell additional Common Shares in the future at a time and price it deems appropriate.

Whether Common Shareholder will realize a gain or loss upon the sale of
Common Shares depends upon whether the market value of the

Common Shares at the time of sale is above or below the price the Common Shareholder paid, taking into account transaction costs for the Common Shares, and is not directly dependent upon the Fund's NAV. Because the market value of the Common Shares will be determined by factors such as the relative demand for and supply of the shares in the market, general market conditions and other factors outside the Fund's control, the Fund cannot predict whether the Common Shares will trade at, below or above NAV, or at, below or above the public offering price for the Common Shares. Common Shares of the Fund are designed primarily for long-term investors; investors in Common Shares should not view the Fund as a vehicle for trading purposes.

Dilution Risk. The voting power of current Common Shareholders will be diluted to the extent that current Common Shareholders do not purchase Common Shares in any future offerings of Common Shares or do not purchase sufficient Common Shares to maintain their percentage interest. If the Fund is unable to invest the proceeds of such offering as intended, the Fund's per Common Share distribution may decrease and the Fund may not participate in market advances to the same extent as if such proceeds were fully invested as planned. If the Fund sells Common Shares at a price below NAV pursuant to the consent of Common Shareholders, shareholders will experience a dilution of the aggregate NAV per Common Share because the sale price will be less than the Fund's then-current NAV per Common Share. Similarly, were the expenses of the offering to exceed the amount by which the sale price exceeded the Fund's then current NAV per Common Share, shareholders would experience a dilution of the aggregate NAV per Common Share. This dilution will be experienced by all shareholders, irrespective of whether they purchase Common Shares in any such offering. See "Description of Capital Structure— Common Shares—Issuance of Additional Common Shares."

Financial Leverage Risk. Although the use of Financial Leverage by the Fund may create an opportunity for increased after-tax total return for the Common Shares, it also results in additional risks and can magnify the effect of any losses. If the income and gains earned on securities purchased with Financial Leverage proceeds are greater than the cost of Financial Leverage, the Fund's return will be greater than if Financial Leverage had not been used. Conversely, if the income or gains from the securities purchased with such proceeds does not cover the cost of Financial Leverage, the return to the Fund will be less than if Financial Leverage had not been used.

Financial Leverage involves risks and special considerations for shareholders, including the likelihood of greater volatility of net asset value and market price of and dividends on the Common Shares than a comparable portfolio without leverage; the risk that fluctuations in interest rates on Borrowings or in the dividend rate on any Preferred Shares that the Fund must pay will reduce the return to the Common Shareholders; and the effect of Financial Leverage in a declining market, which is likely to cause a greater decline in the net asset value of the Common Shares than if the Fund

were not leveraged, which may result in a greater decline in the market price of the Common Shares.

Because the fees received by the Investment Adviser and Sub-Adviser are based on the Managed Assets of the Fund (including the proceeds of any Financial Leverage), the Investment Adviser and Sub-Adviser have a financial incentive for the Fund to utilize Financial Leverage, which may create a conflict of interest between the Investment Adviser and the Sub-Adviser on the one hand and the Common Shareholders on the other. There can be no assurance that a leveraging strategy will be implemented or that it will be successful during any period during which it is employed.

Financial leverage may also be achieved through the purchase of certain derivative instruments. The Fund's use of derivative instruments exposes the Fund to special risks. See "Investment Objectives and Policies—Certain Other Investment Practices— Derivative Transactions" and " Risks—Derivative Transactions Risk."

Recent economic and market events have contributed to severe market volatility and caused severe liquidity strains in the credit markets. If dislocations in the credit markets continue, the Fund's leverage costs may increase and there is a risk that the Fund may not be able to renew or replace existing leverage on favorable terms or at all. If the cost of leverage is no longer favorable, or if the Fund is otherwise required to reduce its leverage, the Fund may not be able to maintain distributions on Common Shares at historical levels and Common Shareholders will bear any costs associated with selling portfolio securities.

See "Risks – Financial Leverage Risk."

Derivative Transactions Risks. Participation in options, futures and other derivative transactions involves investment risks and transaction costs to which the Fund would not be subject absent the use of such strategies. If the Sub-Adviser's prediction of movements in the direction of the securities and interest rate markets is inaccurate, the consequences to the Fund may leave the Fund in a worse position than if it had not used such strategies. Positions in derivatives (such as options, swaps, and futures and forward contracts and options thereon) may subject the Fund to substantial loss of principal in relation to the Fund's investment amount.

Portfolio Turnover Risk. The Fund's annual portfolio turnover rate may vary greatly from year to year. Portfolio turnover rate is not considered a limiting factor in the execution of investment decisions for the Fund. A higher portfolio turnover rate results in correspondingly greater brokerage commissions and other transactional expenses that are borne by the Fund. High portfolio turnover may result in an increased realization of net short-term capital gains by the Fund which, when distributed to Common Shareholders, will be taxable as ordinary income. Additionally, in a declining market, portfolio turnover may create realized capital losses.

Risk Associated with Recent Market Developments. Global and domestic financial markets have experienced periods of unprecedented turmoil.

Instability in the credit markets has made it more difficult for a number of issuers to obtain financings or refinancings for their investment or lending activities or operations. There is a risk that such

issuers will be unable to successfully complete such financings or refinancings. In particular, because of the conditions in the credit markets, issuers of debt securities may be subject to increased cost for debt, tightening underwriting standards and reduced liquidity for loans they make, securities they purchase and securities they issue. There is also a risk that developments in sectors of the credit markets in which the Fund does not invest may adversely affect the liquidity and the value of securities in sectors of the credit markets in which the Fund does invest, including securities owned by the Fund.

The debt and equity capital markets in the United States have been negatively impacted by significant write-offs in the financial services sector relating to sub-prime mortgages and the re-pricing of credit risk in the broadly syndicated market, among other things. These events, along with the deterioration of the housing market, the failure of major financial institutions and the resulting United States federal government actions led to worsening general economic conditions, which materially and adversely impacted the broader financial and credit markets and reduced the availability of debt and equity capital for the market as a whole and financial firms in particular. These events adversely affected the willingness of some lenders to extend credit, which may make it more difficult for issuers of Senior Loans to finance their operations. Such market conditions may increase the volatility of the value of securities owned by the Fund, may make it more difficult for the Fund to accurately value its securities or to sell its securities on a timely basis and may adversely affect the ability of the Fund to borrow for investment purposes and increase the cost of such borrowings, which would reduce returns to the Common Shareholders. These developments adversely affected the broader economy, and may continue to do so, which in turn may adversely affect the ability of issuers of securities owned by the Fund. Such developments could, in turn, reduce the value of securities owned by the Fund and adversely affect the net asset value of the Fund's Common Shares. In addition, the prolonged continuation or further deterioration of current market conditions could adversely impact the Fund's portfolio.

Recently, markets have witnessed more stabilized economic activity as expectations for an economic recovery increased. However, risks to a robust resumption of growth persist. Since 2010, several European Union ("EU") countries, including Greece, Ireland, Italy, Spain, and Portugal, began to face budget issues, some of which may have negative long-term effects for the economies of those countries and other EU countries. There is continued concern about national-level support for the euro and the accompanying coordination of fiscal and wage policy among European Economic and Monetary Union member countries.

A return to unfavorable economic conditions or sustained economic slowdown could adversely impact the Fund's portfolio. Financial market conditions, as well as various social, political, and psychological tensions in the United States and around the world, have contributed to increased market volatility and may have long-term effects on the U.S. and worldwide

financial markets and cause further economic uncertainties or deterioration in the United States and worldwide. Furthermore, volatile financial markets can expose the

Fund to greater market and liquidity risk and potential difficulty in valuing portfolio instruments held by the Fund. The Investment Adviser and Sub-Adviser do not know how long the financial markets will continue to be affected by these events and cannot predict the effects of these or similar events in the future on the U.S. and global economies and securities markets in the Fund's portfolio. The Investment Advisor and the Sub-Adviser intend to monitor developments and seek to manage the Fund's portfolio in a manner consistent with achieving the Fund's investment objective, but there can be no assurance that it will be successful in doing so. Given the risks described above, an investment in Common Shares may not be appropriate for all prospective investors. A prospective investor should carefully consider his or her ability to assume these risks before making an investment in the Fund.

United States Credit Rating Downgrade Risk. The events surrounding the recent negotiations regarding the U.S. federal government debt ceiling and the resulting agreement could adversely affect the Fund's ability to achieve its investment objective. On August 5, 2011, S&P lowered its long-term sovereign credit rating on the U.S. to "AA+" from "AAA." The downgrade by S&P could increase volatility in both stock and bond markets, result in higher interest rates and higher Treasury yields and increase the costs of all kinds of debt. These events could have significant adverse effects on the economy generally and could result in significant adverse impacts on issuers of securities held by the Fund and the Fund itself. Neither the Adviser nor the Sub-Adviser can predict the effects of these or similar events in the future on the U.S. economy and securities markets or on the Fund's portfolio. The Adviser and the Sub-Adviser intend to monitor developments and seek to manage the Fund's portfolio in a manner consistent with achieving the Fund's investment objective, but there can be no assurance that they will be successful in doing so and the Adviser and the Sub-Adviser may not timely anticipate or manage existing, new or additional risks, contingencies or developments.

Risk Associated with Government Intervention in Financial Markets. The instability in the financial markets discussed above has led the U.S. Government to take a number of unprecedented actions designed to support certain financial institutions and segments of the financial markets that have experienced extreme volatility, and in some cases a lack of liquidity. Governments or their agencies have acquired distressed assets from financial institutions and ownership interests in those institutions. The implications of government ownership and disposition of these assets are unclear, and such a program may have positive or negative effects on the liquidity, valuation and performance of the Fund's portfolio holdings. Federal, state, and other governments, their regulatory agencies, or self regulatory organizations may take actions that affect the regulation of the instruments in which the Fund invests, or the issuers of such instruments.

Legislation and Regulation Risk. The Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act"), which was signed into law

in July 2010, has resulted in a significant revision of the U.S. financial regulatory framework. The Dodd-Frank Act covers a

broad range of topics, including, among many others, a reorganization of federal financial regulators; the creation of a process designed to ensure financial system stability and the resolution of potentially insolvent financial firms; the enactment of new rules for derivatives trading; the creation of a consumer financial protection watchdog; the registration and regulation of managers of private funds; the regulation of rating agencies; and the enactment of new federal requirements for residential mortgage loans. The regulation of various types of derivative instruments pursuant to the Dodd-Frank Act may adversely affect issuers of securities in which the Fund invests that utilize derivatives strategies for hedging or other purposes. The ultimate impact of the Dodd-Frank Act, and any resulting regulation, is not yet certain and issuers of securities in which the Fund invests may also be affected by the new legislation and regulation in ways that are currently unknown and unforeseeable.

In connection with an ongoing review by the SEC and its staff of the regulation of investment companies' use of derivatives, on August 31, 2011, the SEC issued a concept release to seek public comment on a wide range of issues raised by the use of derivatives by investment companies. The SEC noted that it intends to consider the comments to help determine whether regulatory initiatives or guidance are needed to improve the current regulatory regime for investment companies and, if so, the nature of any such initiatives or guidance. While the nature of any such regulations is uncertain at this time, it is possible that such regulations could limit the implementation of the Fund's use of derivatives, which could have an adverse impact on the Fund. Neither the Adviser nor the Sub-Adviser can predict the effects of these regulations on the Fund's portfolio. The Adviser and the Sub-Adviser intend to monitor developments and seek to manage the Fund's portfolio in a manner consistent with achieving the Fund's investment objective, but there can be no assurance that they will be successful in doing so.

At any time after the date of this Prospectus, legislation may be enacted that could negatively affect the assets of the Fund or the issuers of such assets. Changing approaches to regulation may have a negative impact on the Fund entities in which the Fund invests. Legislation or regulation may also change the way in which the Fund itself is regulated. There can be no assurance that future legislation, regulation or deregulation will not have a material adverse effect on the Fund or will not impair the ability of the Fund to achieve its investment objective.

TALF, TARP, PPIP and Other Government Programs Risks. In response to the financial crises affecting the banking system and the financial markets, the United States government, the Treasury, the Board of Governors of the Federal Reserve System and other governmental and regulatory bodies have taken action in an attempt to stabilize the financial markets.

The TALF Program and the Legacy Term Asset-Backed Securities Loan Facility program ("Legacy TALF Program") are operated by the established by

(the “Federal Reserve”) and the U.S. Treasury as a credit facility designed to restore liquidity to the market for asset-backed securities and operated by the FRBNY.

Pursuant to the Emergency Economic Stabilization Act of 2008 (the “EESA”), the Troubled Asset Relief Program (the “TARP”) was established. The purpose of this legislation was to stabilize financial markets and institutions in light of the financial crisis affecting the United States. In connection with the TARP, the Treasury announced the creation of the Financial Stability Plan in early 2009. The Financial Stability Plan outlined a series of key initiatives to help restore the United States economy, one of which was the creation of the Public- Private Investment Program (“PPIP”). The PPIP is designed to encourage the transfer of eligible assets, which include certain illiquid real estate-related assets issued prior to 2009 (which may be rated below investment grade, have no readily available trading market (or otherwise be considered illiquid), may be difficult to value and may be backed in part by non-performing mortgages), from banks and other financial institutions in an effort to restart the market for these assets and support the flow of credit and other capital into the broader economy.

Other such programs may be sponsored, established or operated by U.S. or non U.S. governments from time to time. It is unclear what effect these programs, and their eventual termination, may have on the markets for credit securities in which the fund may invest over the near- and long-term. Such programs may have positive or negative effects on the liquidity, valuation and performance of the Fund’s portfolio holdings.

The Fund may invest a portion of its assets through participation in the TALF Program. Under the TALF Program, the FRBNY may provide loans to the Fund to purchase certain investment-grade, asset-backed securities which must be backed by auto loans, student loans, credit card loans, small business loans or certain commercial mortgage- backed securities. The Fund may seek to participate in other government programs from time to time. Participation in such programs may expose the Fund to additional risks and may limit the Fund’s ability to engage in certain of the investment strategies or transactions described in this Prospectus or in the SAI. There can be no assurance that the Fund will be able to participate in any such program.

Market Disruption and Geopolitical Risk. Instability in the Middle East and Africa and terrorist attacks in the United States and around the world have contributed to increased market volatility, may have long-term effects on the U.S. and worldwide financial markets and may cause further economic uncertainties or deterioration in the United States and worldwide. The Adviser and the Sub-Adviser do not know how long the financial markets will continue to be affected by these events and cannot predict the effects of these or similar events in the future on the U.S. and global economies and securities markets.

Anti-Takeover Provisions in the Fund's Governing Documents	The Fund's Agreement and Declaration of Trust and Bylaws (collectively, the "Governing Documents") include provisions that could limit the ability of other entities or persons to acquire control of the Fund or convert the Fund to an open-end fund. These provisions could have the effect of depriving the Common Shareholders of opportunities to sell their Common Shares at a premium over the then- current market price of the Common Shares. See "Anti-Takeover and Other Provisions in the Fund's Governing Documents" and "Risks— Anti-Takeover Provisions."
Administrator, Custodian, Transfer Agent and Dividend Disbursing Agent	<p>The Bank of New York Mellon serves as the custodian of the Fund's assets pursuant to a custody agreement. Under the custody agreement, the custodian holds the Fund's assets in compliance with the 1940 Act. For its services, the custodian will receive a monthly fee based upon, among other things, the average value of the total assets of the Fund, plus certain charges for securities transactions. The Bank of New York Mellon also serves as the Fund's dividend disbursing agent, agent under the Fund's Dividend Reinvestment Plan (the "Plan Agent"), transfer agent and registrar with respect to the Common Shares of the Fund.</p> <p>Guggenheim Funds Investment Advisors, LLC serves as the Fund's administrator. Pursuant to an administration agreement with the Fund, Guggenheim Funds Investment Advisors, LLC provides certain administrative, bookkeeping and accounting services to the Fund.</p>

SUMMARY OF FUND EXPENSES

The following table contains information about the costs and expenses that Common Shareholders will bear directly or indirectly. The table is based on the capital structure of the Fund as of May 31, 2011 (except as noted below). The purpose of the table and the example below is to help you understand the fees and expenses that you, as a Common Shareholder, would bear directly or indirectly.

Shareholder Transaction Expenses	
Sales load (as a percentage of offering price)	----%(1)
Offering expenses borne by the Fund (as a percentage of offering price)	----%(1)
Dividend Reinvestment Plan fees(2)	None
	Percentage of Average Net Assets
	Attributable to Common Shares(3)
Annual Expenses	
Management fee (4)	1.40%
Interest expense (5)	0.84%
Acquired Fund fees and expenses	0.03%
Other expenses(6)	0.45%
Total annual expenses	2.72%

- (1) If Common Shares to which this Prospectus relates are sold to or through underwriters, the Prospectus Supplement will set forth any applicable sales load and the estimated offering expenses borne by the Fund.
- (2) You will pay brokerage charges if you direct the Plan Agent to sell your Common Shares held in a dividend reinvestment account. See "Dividend Reinvestment Plan."
- (3) Based upon average net assets applicable to Common Shares during the period ended May 31, 2011.
- (4) The Fund pays an investment advisory fee to the Investment Adviser in an annual amount equal to 1.00% of the Fund's average daily Managed Assets (as defined herein). Common Shareholders bear the portion of the investment advisory fee attributable to the assets purchased with the proceeds of Financial Leverage, which means that Common Shareholders effectively bear the entire advisory fee.
- (5) Includes interest payments on borrowed funds and interest expense on reverse repurchase agreements. Interest payments on borrowed funds is based upon the Fund's outstanding Financial Leverage as of May 31, 2011, which included Borrowings under the Fund's committed facility agreement in an amount equal to 8.4% of the Fund's Managed Assets, at an annual interest rate cost to the Fund of 1.10% and Borrowings under the TALF program in an amount equal to 3.9% of the Fund's Managed Assets, at an annual interest rate cost to the Fund of 3.80%. The actual amount of interest payments by the Fund will vary over time in accordance with the amount of Borrowings and variations in market interest rates. Interest expenses on reverse repurchase agreements assumes the use of leverage in the form of reverse repurchase agreements representing 17.8% of the Fund's Managed Assets at an annual

interest rate cost to the Fund of 1.93%. The actual amount of interest expense on reverse repurchase agreements borne by the Fund will vary over time in accordance with the level of the Fund's use of reverse repurchase agreements and variations in market interest rates. The Fund has no present intent to increase the amount of Financial Leverage utilized by the Fund as a percentage of Managed Assets during the next year.

- (7) Other expenses are estimated based upon those incurred during the current fiscal year.

31

Example

As required by relevant SEC regulations, the following Example illustrates the expenses that you would pay on a \$1,000 investment in Common Shares, assuming (1) “Total annual expenses” of 2.72% of net assets attributable to Common Shares and (2) a 5% annual return*:

	1 Year	3 Years	5 Years	10 Years
Total Expenses Incurred(1)	\$28	\$84	\$144	\$305

* The Example should not be considered a representation of future expenses or returns. Actual expenses may be higher or lower than those assumed. Moreover, the Fund’s actual rate of return may be higher or lower than the hypothetical 5% return shown in the Example. The Example assumes that all dividends and distributions are reinvested at net asset value.

(1) The example above does not include sales loads or estimated offering costs. In connection with an offering of Common Shares, the Prospectus Supplement will set forth an Example including sales load and estimated offering costs.

FINANCIAL HIGHLIGHTS

The financial highlights table is intended to help you understand the Fund's financial performance. Except where noted, the information in this table is derived from the Fund's financial statements audited by Ernst & Young LLP, independent registered public accounting firm for the Fund, whose report on such financial statements, together with the financial statements of the Fund, are included in the Fund's annual report to shareholders for the period ended May 31, 2011, and are included in the SAI.

	For the Year Ended May 31, 2011	For the Year Ended May 31, 2010	For the Year Ended May 31, 2009	For the period July 27, 2007* through May 31, 2008
Per share operating performance for a Common Share outstanding throughout the period				
Net asset value, beginning of period	\$ 17.56	\$ 12.42	\$ 17.52	\$ 19.10 (b)
Income from investment operations				
Net investment income (a)	1.94	1.76	1.06	0.79
Net realized and unrealized gain (loss) on investments, options, futures, swaps and unfunded commitments	2.49	5.23	(4.31)	(0.99)
Total from investment operations	4.43	6.99	(3.25)	(0.20)
Common Share offering expenses charged to paid-in-capital	—	—	—	(0.04)
Distributions to Common Shareholders				
From and in excess of net investment income	(1.88)	(1.85)	(1.36)	(0.98)
Return of capital	—	—	(0.49)	(0.36)
Total distributions	(1.88)	(1.85)	(1.85)	(1.34)
Net asset value, end of period	\$ 20.11	\$ 17.56	\$ 12.42	\$ 17.52
Market value, end of period	\$ 22.32	\$ 17.46	\$ 11.53	\$ 16.78
Total investment return (c)				
Net asset value	26.14 %	59.06 %	-18.37 %	-1.40 %
Market value	40.85 %	70.37 %	-19.51 %	-9.41 %
Ratios and supplemental data				
Net assets, applicable to Common Shareholders, end of period (thousands)	\$ 187,333	\$ 161,783	\$ 113,076	\$ 159,509
Ratios to Average Net Assets applicable to Common Shares:				
Total expenses, excluding interest expense	1.85 %(d)	1.98 %(d)	2.06 %(d)	1.72 %(d)(e)
Total expenses, including interest expense	2.69 %(d)	2.97 %(d)	3.25 %(d)	3.36 %(d)(e)

Net investment income, including interest expense	10.20	%	11.30	%	7.84	%	5.08	%(d)
Portfolio turnover (f)	64	%	67	%	58	%	210	%
Senior Indebtedness								
Total Borrowings outstanding (in thousands)	\$ 80,670		\$ 69,117		\$ 31,085		\$ 76,016	
Asset coverage per \$1,000 of indebtedness (g)	\$ 3,332		\$ 3,341		\$ 4,638		\$ 3,098	

* Commencement of operations.

- (a) Based on average shares outstanding during the period.
- (b) Before deduction of offering expenses charged to capital.
- (c) Total investment return is calculated assuming a purchase of a Common Share at the beginning of the period and a sale on the last day of the period reported either at net asset value ("NAV") or market price per share. Dividends and distributions are assumed to be reinvested at NAV for NAV returns or the prices obtained under the Fund's Dividend Reinvestment Plan for market value returns. Total investment return does not reflect brokerage commissions. A return calculated for a period of less than one year is not annualized.
- (d) The ratios of total expenses to average net assets applicable to Common Shares do not reflect fees and expenses incurred indirectly by the Fund as a result of its investment in shares of other investment companies. If these fees were included in the expense ratios, expense ratios would increase by 0.03% for the year ended May 31, 2011, 0.05% for the year ended May 31, 2010, 0.08% for the year ended May 31, 2009, and 0.04% for the period ended May 31, 2008.
- (e) Annualized.
- (f) Portfolio turnover is not annualized for periods less than a year.
- (g) Calculated by subtracting the Fund's total liabilities (not including borrowings) from the Fund's total assets and dividing by the total borrowings.

See notes to financial statements.

SENIOR SECURITIES AND OTHER FINANCIAL LEVERAGE

The following table sets forth information about the Fund's outstanding Financial Leverage as of the end of each fiscal year since its inception:

Fiscal Year Ended	Type of Leverage	Total Amount Outstanding	Asset Coverage Per \$1,000
May 31, 2011	Total Leverage	\$80,670,361	\$3,322
	Committed Facility Agreement	\$22,432,914	
	Reverse Repurchase Agreements(1)	\$47,618,513	
	TALF Program(1)	\$10,618,934	
May 31, 2010	Total Leverage	\$69,116,885	\$3,341
	Committed Facility Agreement	\$26,865,369	
	Reverse Repurchase Agreements(1)	\$31,621,245	
	TALF Program(1)	\$10,630,271

(1) As a result of the Fund having earmarked or segregated cash or liquid securities to collateralize the transactions or otherwise having covered the transactions, in accordance with releases and interpretive letters issued by the Securities and Exchange Commission (the "SEC"), the Fund does not treat its obligations under such transactions as senior securities representing indebtedness for purposes of the 1940 Act.

THE FUND

Guggenheim Strategic Opportunities Fund (the “Fund”) is a diversified, closed-end management investment company registered under the Investment Company Act of 1940, as amended (the “1940 Act”) that commenced operations on July 26, 2007. The Fund was organized as a statutory trust on November 13, 2006, pursuant to a Certificate of Trust, and is governed by the laws of the State of Delaware. Its principal office is located at 2455 Corporate West Drive, Lisle, Illinois 60532, and its telephone number is (630) 505-3700.

Guggenheim Funds Investment Advisors, LLC (the “Investment Adviser”) serves as the Fund’s investment adviser and is responsible for the management of the Fund. Guggenheim Partners Asset Management, LLC (the “Sub-Adviser”) is responsible for the management of the Fund’s portfolio of securities. Each of the Investment Adviser and the Sub-Adviser are wholly-owned subsidiaries of Guggenheim Partners, LLC (“Guggenheim Partners”).

Except as otherwise noted, all percentage limitations set forth in this Prospectus apply immediately after a purchase or initial investment and any subsequent change in any applicable percentage resulting from market fluctuations does not require any action.

USE OF PROCEEDS

Unless otherwise specified in a supplement to this Prospectus (each a “Prospectus Supplement”), the Fund intends to invest the net proceeds of an offering of Common Shares in accordance with its investment objective and policies as stated herein. It is currently anticipated that the Fund will be able to invest substantially all of the net proceeds of an offering of Common Shares in accordance with its investment objective and policies within three months after the completion of such offering. Pending such investment, it is anticipated that the proceeds will be invested in U.S. government securities or high quality, short-term money market securities. The Fund may also use the proceeds for working capital purposes, including the payment of distributions, interest and operating expenses, although the Fund currently has no intent to issue Common Shares primarily for this purpose.

MARKET AND NET ASSET VALUE INFORMATION

The Fund’s currently outstanding Common Shares are, and the Common Shares offered by this Prospectus, will be, subject to notice of issuance, listed on the New York Stock Exchange (the “NYSE”). The Fund’s Common Shares commenced trading on the NYSE on July 27, 2007.

The Common Shares have traded both at a premium and at a discount in relation to the Fund’s net asset value (“NAV”) per share. Although the Common Shares recently have traded at a premium to NAV, there can be no assurance that this will continue after the offering nor that the Common Shares will not trade at a discount in the future. Shares of closed-end investment companies frequently trade at a discount to net asset value. The Fund’s NAV may be reduced immediately following an offering of the Common Shares due to the costs of such offering, which will be borne entirely by the Fund. The sale of Common Shares by the Fund (or the perception that such sales may occur) may have an adverse effect on prices of Common Shares in the secondary market. An increase in the number of Common Shares

available may put downward pressure on the market price for Common Shares. See “Risks—Market Discount Risk.”

The following table sets forth, for each of the periods indicated, the high and low closing market prices for the Common Shares on the NYSE, as well as the NAV per Common Share and the premium or discount to net asset value per Common Share at which the Common Shares were trading on the date of the high and low closing prices. The

35

Fund calculates its NAV as of the close of business, usually 5:00 p.m. Eastern time, every day on which the NYSE is open. See “Net Asset Value” for information as to the determination of the Fund’s NAV.

During Quarter Ended	Market Price		NAV per Common Share on Date of Market Price High and Low(1)		Premium/(Discount) on Date of Market Price High and Low(2)	
	High	Low	High	Low	High	Low
November 30, 2011	\$20.62	\$18.63	\$18.63	\$17.92	10.68%	3.96%
August 31, 2011	22.23	17.33	20.07	18.86	10.76	(8.11)

(1) Based on the Fund’s computations

(2) Calculated based on the information presented. Percentages are rounded.

The last reported sale price, NAV per Common Share and percentage premium to NAV per Common Share on [], 2011 was \$[], \$[] and []%, respectively. The Fund cannot predict whether its Common Shares will trade in the future at a premium to or discount from NAV, or the level of any premium or discount. Shares of closed-end investment companies frequently trade at a discount from NAV. The Fund’s Common Shares have in the past traded below their NAV. As of [], 2011, [] Common Shares of the Fund were outstanding.

INVESTMENT OBJECTIVE AND POLICIES

Investment Objective

The Fund’s investment objective is to maximize total return through a combination of current income and capital appreciation. The Fund’s investment objective is considered fundamental and may not be changed without the approval of a majority of the outstanding voting securities (as defined in the 1940 Act) of the Fund. The Fund cannot ensure investors that it will achieve its investment objective.

Investment Philosophy and Investment Process

The Fund will pursue a relative value-based investment philosophy, which utilizes quantitative and qualitative analysis to seek to identify securities or spreads between securities that deviate from their fair value and/or historical norms. The Sub-Adviser seeks to combine a credit-managed fixed-income portfolio with access to a diversified pool of alternative investments and equity strategies. The Fund's investment philosophy is predicated upon the belief that thorough research and independent thought is rewarded with performance that has the potential to outperform benchmark indexes with both lower volatility and lower correlation of returns as compared to such benchmark indexes. The Fund cannot ensure that the perceived fair value of the Fund's portfolio investments will be achieved.

The Sub-Adviser's investment process is a collaborative effort between its Portfolio Construction Group, which utilizes tools such as Guggenheim Partners' Dynamic Financial Analysis Model to determine allocation of assets among a variety of sectors, and its Sector Specialists, who are responsible for security selection within these sectors and for implementing securities transactions, including the structuring of certain securities directly with the issuer or with investment banks and dealers involved in the origination of such securities.

Investment Policies

The Fund will seek to achieve its investment objective by investing in a wide range of fixed-income and other debt and senior equity securities (“Income Securities”) selected from a variety of sectors, including, but not limited to, U.S. government and agency securities, corporate bonds, loans and loan participations, structured finance investments (including residential and commercial mortgage-related securities, asset-backed securities, collateralized debt obligations and risk-linked securities), mezzanine and preferred securities and convertible securities. The Fund may invest in non-U.S. dollar-denominated Income Securities issued by sovereign entities and corporations, including Income Securities of issuers in emerging market countries. The Fund may invest in Income Securities of any credit quality, including Income Securities rated below-investment grade (commonly referred to as “high-yield” or “junk” bonds), which are considered speculative with respect to the issuer’s capacity to pay interest and repay principal.

The Fund may also invest in common stocks, limited liability company interests, trust certificates and other equity investments (“Common Equity Securities”) that the Sub-Adviser believes offer attractive yield and/or capital appreciation potential. As part of its Common Equity Securities strategy, the Fund currently intends to employ a strategy of writing (selling) covered call options and may, from time to time, buy or sell put options on individual Common Equity Securities. In addition to its covered call option strategy, the Fund may, to a lesser extent, pursue a strategy that includes the sale (writing) of both covered call and put options on indices of securities and sectors of securities.

The Fund may allocate its assets among a wide variety of Income Securities and Common Equity Securities, provided that, under normal market conditions, the Fund will not invest more than:

- 60% of its total assets in Income Securities rated below-investment grade;
 - 50% of its total assets in Common Equity Securities;
- 30% of its total assets in other investment companies, including registered investment companies, private investment funds and/or other pooled investment vehicles;
- 20% of its total assets in non-U.S. dollar-denominated fixed-income securities of corporate and governmental issuers located outside the United States; and
 - 10% of its total assets in emerging markets.

The percentage of the Fund’s total assets allocated to any category of investment may at any given time be significantly less than the percentage permitted pursuant to the above referenced investment policies.

These policies may be changed by the Board of Trustees, but no change is anticipated. If the Fund's policies change, the Fund will provide shareholders at least 60 days' prior written notice before implementation of the change.

Percentage limitations described in this Prospectus are as of the time of investment by the Fund and could thereafter be exceeded as a result of market value fluctuations of the Fund's portfolio.

Credit Quality. The Fund may invest up to 60% of its total assets in Income Securities rated below-investment grade (e.g., securities rated below Baa3 by Moody's Investors Service, Inc. ("Moody's") or below BBB- by Standard & Poor's Ratings Group ("S&P")) or, if unrated, determined by the Sub-Adviser to be of comparable quality, and may invest without limitation in Income Securities rated investment grade or, if unrated, determined by the Sub-Adviser to be of comparable quality. The Fund will not invest in Income Securities rated below CCC by Moody's or Caa2 by S&P or that at the time of purchase are in default. Securities rated below-investment grade are regarded as having predominately speculative characteristics with respect to the issuer's capacity to pay interest and repay principal, and are commonly referred to as "junk bonds" or "high-yield bonds." Lower grade securities may be particularly susceptible to economic downturns. It is likely that an economic recession could severely disrupt the market for such securities and may have an adverse effect on the value of such securities. In addition, it is likely that any such economic downturn could adversely affect the ability of the issuers of such securities to repay principal and pay interest thereon and increase the incidence of default for such securities.

These credit quality policies apply only at the time a security is purchased, and the Fund is not required to dispose of a security if a rating agency or the Sub-Adviser downgrades its assessment of that security. In determining whether to retain or sell a security that a rating agency or the Sub-Adviser has downgraded, the Sub-Adviser may

consider such factors as its assessment of the credit quality of the security, the price at which the security could be sold, and the rating, if any, assigned to the security by other ratings agencies. When the Sub-Adviser believes it to be in the best interests of the Fund's shareholders, the Fund will reduce its investment in lower grade securities and, in certain market conditions, the Fund may invest none of its assets in lower grade securities.

Rating agencies, such as Moody's or S&P, are private services that provide ratings of the credit quality of debt obligations. Ratings assigned by a rating agency are not absolute standards of credit quality but represent the opinion of the rating agency as to the quality of the obligation. Ratings do not evaluate market risks or the liquidity of securities. Rating agencies may fail to make timely changes in credit ratings and an issuer's current financial condition may be better or worse than a rating indicates. To the extent that the issuer of a security pays a rating agency for the analysis of its security, an inherent conflict of interest may exist that could affect the reliability of the rating. Ratings are relative and subjective and, although ratings may be useful in evaluating the safety of interest and principal payments, they do not evaluate the market value risk of such obligations. Although these ratings may be an initial criterion for selection of portfolio investments, the Sub-Adviser also will independently evaluate these securities and the ability of the issuers of such securities to pay interest and principal. To the extent that the Fund invests in unrated lower grade securities, the Fund's ability to achieve its investment objective will be more dependent on the Sub-Adviser's credit analysis than would be the case when the Fund invests in rated securities.

Please refer to Appendix A to the SAI for more information regarding Moody's and S&P's ratings of fixed-income securities.

THE FUND'S INVESTMENTS

The Fund will seek to achieve its investment objective by investing in the following categories of securities:

Income Securities. The Fund may invest in a wide range of Income Securities selected from a variety of sectors, including, but not limited to, corporate bonds, loans and loan participations (including senior secured floating rate loans ("Senior Loans"), "second lien" secured floating rate loans ("Second Lien Loans"), and other types of secured and unsecured loans with fixed and variable interest rates) (collectively, "Loans"), structured finance investments (including residential and commercial mortgage-related securities, asset-backed securities, collateralized debt obligations and risk-linked securities), U.S. government and agency securities, mezzanine and preferred securities and convertible securities. The Fund may invest in non-U.S. dollar-denominated Income Securities issued by sovereign entities and corporations, including Income Securities of issuers in emerging market countries. The Fund may invest in Income Securities of any credit quality, including Income Securities rated below-investment grade (commonly referred to as "high-yield" or "junk" bonds), which are considered speculative with respect to the issuer's capacity to pay interest and repay principal.

Common Equity Securities and Covered Call Option Strategy. The Fund may invest in Common Equity Securities that the Sub-Adviser believes offer attractive yield and/or capital appreciation potential. As part of its Common Equity Securities strategy, the Fund currently intends to employ a strategy of writing (selling) covered call options and may, from time to time, buy or sell put options on individual Common Equity Securities. In addition to its covered call option strategy, the Fund may, to a lesser extent, pursue a strategy that includes the sale (writing) of both covered call and put options on indices of securities and sectors of securities. This option strategy is intended to generate current

gains from option premiums as a means to enhance distributions payable to the Fund's Common Shareholders. As the Fund writes covered calls over more of its portfolio, its ability to benefit from capital appreciation becomes more limited. A substantial portion of the options written by the Fund may be over-the-counter options ("OTC options").

Real Property Asset Companies. The Fund may invest in Income Securities and Common Equity Securities issued by companies that own, produce, refine, process, transport and market "real property assets," such as real estate and the natural resources upon or within real estate ("Real Property Asset Companies"). These Real Property Asset Companies include:

- Companies engaged in the ownership, construction, financing, management and/or sale of commercial, industrial and/or residential real estate (or that have assets primarily invested in such real estate), including real estate investment trusts ("REITs"); and

- Companies engaged in energy, natural resources and basic materials businesses and companies engaged in associated businesses. These companies include, but are not limited to, those engaged in businesses such as oil and gas exploration and production, gold and other precious metals, steel and iron ore production, energy services, forest products, chemicals, coal, alternative energy sources and environmental services, as well as related transportation companies and equipment manufacturers.

Personal Property Asset Companies. The Fund may invest in Income Securities and Common Equity Securities issued by companies that seek to profit primarily from the ownership, rental, leasing, financing or disposition of “personal property assets” (“Personal Property Asset Companies”). Personal (as opposed to real) property assets include any tangible, movable property or asset. The Fund will typically seek to invest in Income Securities and Common Equity Securities of Personal Property Asset Companies with investment performance that is not highly correlated with traditional market indexes because the personal property asset held by such company is non-correlated with traditional debt or equity markets. Such personal property assets include special situation transportation assets (e.g., railcars, airplanes and ships) and collectibles (e.g., antiques, wine and fine art).

Private Securities. The Income Securities and Common Equity Securities in which the Fund may invest include privately issued securities of both public and private companies (“Private Securities”). Private Securities have additional risk considerations than comparable public securities, including availability of financial information about the issuer and valuation and liquidity issues.

Investment Funds. As an alternative to holding investments directly, the Fund may also obtain investment exposure to Income Securities and Common Equity Securities by investing in other investment companies, including registered investment companies, private investment funds and/or other pooled investment vehicles (collectively, “Investment Funds”). The Fund may invest up to 30% of its total assets in Investment Funds that primarily hold (directly or indirectly) investments in which the Fund may invest directly, of which amount up to 20% of its total assets may be invested in Investment Funds that are registered as investment companies (“Registered Investment Funds”) under the 1940 Act. As used in this Prospectus, “Private Investment Funds” means privately offered Investment Funds that are excluded from the definition of “investment company” under the 1940 Act, including by operation of Section 3(c)(1) or 3(c)(7) thereof. Such funds may be commonly referred to as “hedge funds” or “private equity funds.” The Fund will invest in Private Investment Funds only to the extent permitted by applicable rules, regulations and interpretations of the SEC and NYSE. Investments in other Investment Funds involve operating expenses and fees at the Investment Fund level that are in addition to the expenses and fees borne by the Fund and are borne indirectly by holders of the Fund’s Common Shares.

Synthetic Investments. As an alternative to holding investments directly, the Fund may also obtain investment exposure to Income Securities and Common Equity Securities through the use of customized derivative instruments (including swaps, options, forwards, notional principal contracts or other financial instruments) to replicate, modify or replace the economic attributes associated with an investment in Income Securities and Common Equity Securities (including interests in Investment Funds. The Fund may be exposed to certain additional risks should the Sub-Adviser use derivatives as a means to synthetically implement the Fund’s investment strategies, including a lack of liquidity in such derivative instruments and additional expenses associated with using such derivative instruments.

Portfolio Contents

The Fund's investment portfolio consists of investments in the following types of securities:

Corporate Bonds. Corporate bonds are debt obligations issued by corporations. Corporate bonds may be either secured or unsecured. Collateral used for secured debt includes, but is not limited to, real property, machinery, equipment, accounts receivable, stocks, bonds or notes. If a bond is unsecured, it is known as a debenture. Bondholders, as creditors, have a prior legal claim over common and preferred stockholders as to both income and assets of the corporation for the principal and interest due them and may have a prior claim over other creditors if liens or mortgages are involved. Interest on corporate bonds may be fixed or floating, or the bonds may be zero coupons. Interest on corporate bonds is typically paid semi-annually and is fully taxable to the bondholder. Corporate bonds contain elements of both interest-rate risk and credit risk. The market value of a corporate bond generally may be expected to rise and fall inversely with interest rates and may also be affected by the credit rating of the corporation, the corporation's performance and perceptions of the corporation in the marketplace. Corporate bonds usually yield more than government or agency bonds due to the presence of credit risk.

Investment Grade Bonds. The Fund may invest in a wide variety of fixed-income securities rated or determined by the Sub-Adviser to be investment grade quality that are issued by corporations and other non-governmental entities and issuers (“Investment Grade Bonds”). Investment Grade Bonds are subject to market and credit risk. Market risk relates to changes in a security’s value. Investment Grade Bonds have varying levels of sensitivity to changes in interest rates and varying degrees of credit quality. In general, bond prices rise when interest rates fall, and fall when interest rates rise. Longer-term and zero coupon bonds are generally more sensitive to interest rate changes. Credit risk relates to the ability of the issuer to make payments of principal and interest. The values of Investment Grade Bonds, like those of other fixed-income securities, may be affected by changes in the credit rating or financial condition of an issuer. Investment Grade Bonds are generally considered medium- and high-quality securities. Some, however, may possess speculative characteristics, and may be more sensitive to economic changes and changes in the financial condition of issuers. The market prices of Investment Grade Bonds in the lowest investment grade categories may fluctuate more than higher-quality securities and may decline significantly in periods of general or regional economic difficulty. Investment Grade Bonds in the lowest investment grade categories may be thinly traded, making them difficult to sell promptly at an acceptable price. Investment Grade Bonds include certain investment grade quality mortgage-related securities, asset-backed securities, and other hybrid securities and instruments that are treated as debt obligations for U.S. federal income tax purposes.

Below-Investment Grade Bonds. The Fund may invest up to 60% of its total assets in a wide variety of fixed-income securities that are rated or determined by the Sub-Adviser to be below-investment grade quality (“Below-Investment Grade Bonds”). The credit quality of most Below-Investment Grade Bonds reflects a greater than average possibility that adverse changes in the financial condition of an issuer, or in general economic conditions, or both, may impair the ability of the issuer to make payments of interest and principal. The inability (or perceived inability) of issuers to make timely payment of interest and principal would likely make the values of Below-Investment Grade Bonds held by the Fund more volatile and could limit the Fund’s ability to sell such Bonds at favorable prices. In the absence of a liquid trading market for its Below-Investment Grade Bonds, the Fund may have difficulties determining the fair market value of such investments. Below-Investment Grade Bonds include certain investment grade quality mortgage-related securities, asset-backed securities, and other hybrid securities and instruments that are treated as debt obligations for U.S. federal income tax purposes.

In addition to pre-existing outstanding debt obligations of below-investment grade issuers, the Fund may also invest in “debtor-in-possession” or “DIP” Loans newly issued in connection with “special situation” restructuring and refinancing transactions. DIP Loans are Loans to a debtor-in-possession in a proceeding under the U.S. bankruptcy code that have been approved by the bankruptcy court. DIP Loans are typically fully secured by a lien on the debtor’s otherwise unencumbered assets or secured by a junior lien on the debtor’s encumbered assets (so long as the Loan is fully secured based on the most recent current valuation or appraisal report of the debtor). DIP Loans are often required to close with certainty and in a rapid manner in order to satisfy existing creditors and to enable the issuer to emerge from bankruptcy or to avoid a bankruptcy proceeding. The Sub-Adviser believes that DIP Loans can offer holders thereof the opportunity to achieve attractive rates of return relative to the risk assumed.

Structured Finance Investments. The Fund may invest in structured finance investments, which are Income Securities and Common Equity Securities typically issued by special purpose vehicles that hold income-producing securities (e.g., mortgage loans, consumer debt payment obligations and other receivables) and other financial assets. Structured finance investments are tailored, or packaged, to meet certain financial goals of investors. Typically, these investments provide investors with capital protection, income generation and/or the opportunity to generate capital growth. The Sub-Adviser believes that structured finance investments provide attractive risk-adjusted returns, frequent sector rotation opportunities and prospects for adding value through security selection. Structured finance investments

include:

Mortgage-Related Securities. Mortgage-related securities are a form of derivative collateralized by pools of commercial or residential mortgages. Pools of mortgage loans are assembled as securities for sale to investors by various governmental, government-related and private organizations. These securities may include complex instruments such as collateralized mortgage obligations, REITs (including debt and preferred stock issued by REITs), and other real estate-related securities. The mortgage-related securities in which the Fund may invest include those with fixed, floating or variable interest rates, those with interest rates that change based on multiples of changes in a specified index of interest rates, and those with interest rates that change inversely to changes in

interest rates, as well as those that do not bear interest. The Fund may invest in residential and commercial mortgage-related securities issued by governmental entities and private issuers, including subordinated mortgage-related securities. The underlying assets of certain mortgage-related securities may be subject to prepayments, which shorten the weighted average maturity and may lower the return of such securities. See “Investment Objective and Policies – Additional Investment Policies – Mortgage Related Securities” in the Fund’s SAI for additional information regarding various types of mortgage-related securities.

Asset-Backed Securities. Asset-backed securities are a form of derivative issued by governmental entities and private issuers which utilizes securitization techniques similar to those used for mortgage-related securities. The collateral for these securities may include home equity loans, automobile and credit card receivables, boat loans, computer leases, airplane leases, mobile home loans, recreational vehicle loans and hospital account receivables. The Fund may invest in these and other types of asset-backed securities that may be developed in the future. Asset-backed securities are subject to the same risk of prepayment described above with respect to mortgage-related securities. Asset-backed securities may provide the Fund with a less effective security interest in the related collateral than do mortgage-related securities, and thus it is possible that recovery on repossessed collateral might be unavailable or inadequate to support payments on these securities.

Collateralized Debt Obligations. A collateralized debt obligation (“CDO”) is an asset-backed security whose underlying collateral is typically a portfolio of bonds, bank loans, other structured finance securities and/or synthetic instruments. Where the underlying collateral is a portfolio of bonds, a CDO is referred to as a collateralized bond obligation (“CBO”). Where the underlying collateral is a portfolio of bank loans, a CDO is referred to as a collateralized loan obligation (“CLO”). Investors in CDOs bear the credit risk of the underlying collateral. Multiple tranches of securities are issued by the CDO, offering investors various maturity and credit risk characteristics. Tranches are categorized as senior, mezzanine, and subordinated/equity, according to their degree of risk. If there are defaults or the CDO’s collateral otherwise underperforms, scheduled payments to senior tranches take precedence over those of mezzanine tranches, and scheduled payments to mezzanine tranches take precedence over those to subordinated/equity tranches. CDOs are subject to the same risk of prepayment described with respect to certain mortgage-related and asset-backed securities. The value of CDOs may be affected by changes in the market’s perception of the creditworthiness of the servicing agent for the pool, the originator of the pool, or the financial institution or fund providing the credit support or enhancement.

Risk-Linked Securities. Risk-linked securities (“RLS”) are a form of derivative issued by insurance companies and insurance-related special purpose vehicles that apply securitization techniques to catastrophic property and casualty damages. RLS are typically debt obligations for which the return of principal and the payment of interest are contingent on the non-occurrence of a pre-defined “trigger event.” Depending on the specific terms and structure of the RLS, this trigger could be the result of a hurricane, earthquake or some other catastrophic event. Insurance companies securitize this risk to transfer to the capital markets the truly catastrophic part of the risk exposure. A typical RLS provides for income and return of capital similar to other fixed-income investments, but would involve full or partial default if losses resulting from a certain catastrophe exceeded a predetermined amount. RLS typically have relatively high yields compared with similarly rated fixed-income securities, and also have low correlation with the returns of traditional securities. The Sub-Adviser believes that inclusion of RLS in the Fund’s portfolio could lead to significant improvement in its overall risk-return profile. Investments in RLS may be linked to a broad range of insurance risks, which can be broken down into three major categories: natural risks (such as hurricanes and earthquakes), weather risks (such as insurance based on a regional average temperature) and non-natural events (such as aerospace and shipping catastrophes). Although property-casualty RLS have been in existence for over a decade, significant developments have started to occur in securitizations done by life insurance companies. In general, life insurance

industry securitizations could fall into a number of categories. Some are driven primarily by the desire to transfer risk to the capital markets, such as the transfer of extreme mortality risk (mortality bonds). Others, while also including the element of risk transfer, are driven by other considerations. For example, a securitization could be undertaken to relieve the capital strain on life insurance companies caused by the regulatory requirements of establishing very conservative reserves for some types of products. Another example is the securitization of the stream of future cash flows from a particular block of business, including the securitization of embedded values of life insurance business or securitization for the purpose of funding acquisition costs.

Senior Loans. Senior Loans are floating rate Loans made to corporations and other non-governmental entities and issuers. Senior Loans typically hold the most senior position in the capital structure of the issuing entity, are typically secured with specific collateral and typically have a claim on the assets and/or stock of the borrower that is senior to that held by subordinated debt holders and stockholders of the borrower. The proceeds of Senior Loans primarily are used to finance leveraged buyouts, recapitalizations, mergers, acquisitions, stock repurchases, dividends, and, to a lesser extent, to finance internal growth and for other corporate purposes. Senior Loans typically have rates of interest that are redetermined daily, monthly, quarterly or semi-annually by reference to a base lending rate, plus a premium or credit spread. Base lending rates in common usage today are primarily the London-Interbank Offered Rate (“LIBOR”), and secondarily the prime rate offered by one or more major U.S. banks (the “Prime Rate”) and the certificate of deposit (“CD”) rate or other base lending rates used by commercial lenders.

Second Lien Loans. Second Lien Loans are Loans made by public and private corporations and other nongovernmental entities and issuers for a variety of purposes. Second Lien Loans are second in right of payment to one or more Senior Loans of the related borrower. Second Lien Loans typically are secured by a second priority security interest or lien to or on specified collateral securing the borrower’s obligation under the Loan and typically have similar protections and rights as Senior Loans. Second Lien Loans are not (and by their terms cannot) become subordinate in right of payment to any obligation of the related borrower other than Senior Loans of such borrower. Second Lien Loans, like Senior Loans, typically have adjustable floating rate interest payments. Because Second Lien Loans are second to Senior Loans, they present a greater degree of investment risk but often pay interest at higher rates reflecting this additional risk. Such investments generally are of below-investment grade quality. Other than their subordinated status, Second Lien Loans have many characteristics and risks similar to Senior Loans discussed above. In addition, Second Lien Loans and debt securities of below-investment grade quality share many of the risk characteristics of Non-Investment Grade Bonds.

Mezzanine Investments. The Fund may invest in certain lower grade securities known as “Mezzanine Investments,” which are subordinated debt securities that are generally issued in private placements in connection with an equity security (e.g., with attached warrants) or may be convertible into equity securities. Mezzanine Investments may be issued with or without registration rights. Similar to other lower grade securities, maturities of Mezzanine Investments are typically seven to ten years, but the expected average life is significantly shorter at three to five years. Mezzanine Investments are usually unsecured and subordinated to other obligations of the issuer.

Convertible Securities. Convertible securities include bonds, debentures, notes, preferred stocks and other securities that entitle the holder to acquire common stock or other equity securities of the same or a different issuer. Convertible securities have general characteristics similar to both debt and equity securities. A convertible security generally entitles the holder to receive interest or preferred dividends paid or accrued until the convertible security matures or is redeemed, converted or exchanged. Before conversion, convertible securities have characteristics similar to non-convertible debt obligations. Convertible securities rank senior to common stock in a corporation’s capital structure and, therefore, generally entail less risk than the corporation’s common stock, although the extent to which such risk is reduced depends in large measure upon the degree to which the convertible security sells above its value as a debt obligation. A convertible security may be subject to redemption at the option of the issuer at a predetermined price. If a convertible security held by the Fund is called for redemption, the Fund would be required to permit the issuer to redeem the security and convert it to underlying common stock, or would sell the convertible security to a third party, which may have an adverse effect on the Fund’s ability to achieve its investment objectives. The price of a convertible security often reflects variations in the price of the underlying common stock in a way that non-convertible debt may not. The value of a convertible security is a function of (i) its yield in comparison to the yields of other securities of comparable maturity and quality that do not have a conversion privilege and (ii) its worth

if converted into the underlying common stock.

Preferred Stocks. Preferred stocks represent the senior residual interest in the assets of an issuer after meeting all claims, with priority to corporate income and liquidation payments over the issuer's common stock. As such, preferred stock is inherently more risky than the bonds and loans of the issuer, but less risky than its common stock. Preferred stocks often contain provisions that allow for redemption in the event of certain tax or legal changes or at the issuers' call. Preferred stocks typically do not provide any voting rights, except in cases when dividends are in arrears beyond a certain time period. Preferred stock in some instances is convertible into common stock.

Although they are equity securities, preferred stocks have certain characteristics of both debt and common stock. They are debt-like in that their promised income is contractually fixed. They are common stock-like in that they do not have rights to precipitate bankruptcy proceedings or collection activities in the event of missed payments. Furthermore, they have many of the key characteristics of equity due to their subordinated position in an issuer's capital structure and because their quality and value are heavily dependent on the profitability of the issuer rather than on any legal claims to specific assets or cash flows. In order to be payable, dividends on preferred stock must be declared by the issuer's board of directors. In addition, distributions on preferred stock may be subject to deferral and thus may not be automatically payable. Income payments on some preferred stocks are cumulative, causing dividends and distributions to accrue even if not declared by the board of directors or otherwise made payable. Other preferred stocks are non-cumulative, meaning that skipped dividends and distributions do not continue to accrue. There is no assurance that dividends on preferred stocks in which the Fund invests will be declared or otherwise made payable. If the Fund owns preferred stock that is deferring its distributions, the Fund may be required to report income for U.S. federal income tax purposes while it is not receiving cash payments corresponding to such income. When interest rates fall below the rate payable on an issue of preferred stock or for other reasons, the issuer may redeem the preferred stock, generally after an initial period of call protection in which the stock is not redeemable. Preferred stocks may be significantly less liquid than many other securities, such as U.S. Government securities, corporate bonds and common stock.

U.S. Government Securities. The Fund may invest in debt securities issued or guaranteed by the U.S. government, its agencies or instrumentalities including: (1) U.S. Treasury obligations, which differ in their interest rates, maturities and times of issuance, such as U.S. Treasury bills (maturity of one year or less), U.S. Treasury notes (maturity of one to ten years), and U.S. Treasury bonds (generally maturities of greater than ten years), including the principal components or the interest components issued by the U.S. government under the separate trading of registered interest and principal securities program (i.e., "STRIPS"), all of which are backed by the full faith and credit of the United States; and (2) obligations issued or guaranteed by U.S. government agencies or instrumentalities, including government guaranteed mortgage-related securities, some of which are backed by the full faith and credit of the U.S. Treasury, some of which are supported by the right of the issuer to borrow from the U.S. government, and some of which are backed only by the credit of the issuer itself.

Foreign Securities. While the Fund invests primarily in securities of U.S. issuers, the Fund may invest up to 20% of its total assets in non-U.S. dollar-denominated fixed-income securities of corporate and governmental issuers located outside the United States, including up to 10% in emerging markets. Foreign securities include securities issued or guaranteed by companies organized under the laws of countries other than the United States and securities issued or guaranteed by foreign governments, their agencies or instrumentalities and supra-national governmental entities, such as the World Bank. Foreign securities also may be traded on foreign securities exchanges or in over-the-counter capital markets. The value of foreign securities and obligations is affected by changes in currency rates, foreign tax laws (including withholding tax), government policies (in this country or abroad), relations between nations and trading, settlement, custodial and other operational risks. In addition, the costs of investing abroad are generally higher than in the United States, and foreign securities markets may be less liquid, more volatile and less subject to governmental supervision than markets in the United States. Foreign investments also could be affected by other factors not present in the United States, including expropriation, armed conflict, confiscatory taxation, lack of uniform accounting and auditing standards, less publicly available financial and other information and potential difficulties in enforcing contractual obligations.

Since the Fund may invest in securities and obligations that are denominated or quoted in currencies other than the U.S. dollar, the Fund may be affected by changes in foreign currency exchange rates (and exchange control

regulations) which affect the value of investments in the Fund and the accrued income and appreciation or depreciation of the investments in U.S. dollars. Changes in foreign currency exchange rates relative to the U.S. dollar will affect the U.S. dollar value of the Fund's assets denominated in that currency and the Fund's return on such assets as well as any temporary uninvested reserves in bank deposits in foreign currencies. In addition, the Fund will incur costs in connection with conversions between various currencies. The Fund may seek to fully hedge its exposures to foreign currencies but may, at the discretion of the Sub-Adviser, at any time limit or eliminate foreign currency hedging activity.

Common Stocks and Other Common Equity Securities. The Fund may also invest in common stocks and other Common Equity Securities that the Sub-Adviser believes offer attractive yield and/or capital appreciation potential. Common stock represents the residual ownership interest in the issuer. Holders of common stocks and other Common Equity Securities are entitled to the income and increase in the value of the assets and business of the issuer after all of its debt obligations and obligations to preferred stockholders are satisfied. The Fund may invest in companies of any market capitalization.

Options. As part of its Common Equity Securities strategy, the Fund currently intends to employ a strategy of writing (selling) covered call options and may, from time to time, buy or sell put options on individual Common Equity Securities. In addition to its covered call option strategy, the Fund may, to a lesser extent, pursue a strategy that includes the sale (writing) of both covered call and put options on indices of securities and sectors of securities. This option strategy is intended to generate current gains from option premiums as a means to enhance distributions payable to the Fund's Common Shareholders. An option on a security is a contract that gives the holder of the option, in return for a premium, the right to buy from (in the case of a call) or sell to (in the case of a put) the writer of the option the security underlying the option at a specified exercise or "strike" price. The writer of an option on a security has the obligation upon exercise of the option to deliver the underlying security upon payment of the exercise price or to pay the exercise price upon delivery of the underlying security. Certain options, known as "American style" options may be exercised at any time during the term of the option. Other options, known as "European style" options, may be exercised only on the expiration date of the option.

If an option written by the Fund expires unexercised, the Fund realizes on the expiration date a capital gain equal to the premium received by the Fund at the time the option was written. If an option purchased by the Fund expires unexercised, the Fund realizes a capital loss equal to the premium paid. Prior to the earlier of exercise or expiration, an exchange-traded option may be closed out by an offsetting purchase or sale of an option of the same series (type, underlying security, exercise price and expiration). There can be no assurance, however, that a closing purchase or sale transaction can be effected when the Fund desires. The Fund may sell put or call options it has previously purchased, which could result in a net gain or loss depending on whether the amount realized on the sale is more or less than the premium and other transaction costs paid on the put or call option when purchased. The Fund will realize a capital gain from a closing purchase transaction if the cost of the closing option is less than the premium received from writing the option, or, if it is more, the Fund will realize a capital loss. If the premium received from a closing sale transaction is more than the premium paid to purchase the option, the Fund will realize a capital gain or, if it is less, the Fund will realize a capital loss. Net gains from the Fund's option strategy will be short-term capital gains which, for U.S. federal income tax purposes, will constitute net investment company taxable income.

The Fund will follow a strategy known as "covered call option writing," which is a strategy designed to generate current gains from option premiums as a means to enhance distributions payable to the Fund's Common Shareholders. As the Fund writes covered calls over more of its portfolio, its ability to benefit from capital appreciation becomes more limited.

As part of its strategy, the Fund may not sell "naked" call options on individual securities, i.e., options representing more shares of the stock than are held in the portfolio. A call option written by the Fund on a security is "covered" if the Fund owns the security underlying the call or has an absolute and immediate right to acquire that security without additional cash consideration (or, if additional cash consideration is required, cash or other assets determined to be liquid by the Sub-Adviser (in accordance with procedures established by the board of trustees) in such amount are segregated by the Fund's custodian) upon conversion or exchange of other securities held by the Fund. A call option is

also covered if the Fund holds a call on the same security as the call written where the exercise price of the call held is (i) equal to or less than the exercise price of the call written, or (ii) greater than the exercise price of the call written, provided the difference is maintained by the Fund in segregated assets determined to be liquid by the Sub-Adviser as described above.

Put options are contracts that give the holder of the option, in return for a premium, the right to sell to the writer of the option the security underlying the option at a specified exercise price at any time during the term of the option. These strategies may produce a considerably higher return than the Fund's primary strategy of covered call writing, but involve a higher degree of risk and potential volatility.

The Fund will write (sell) put options on individual securities only if the put option is “covered.” A put option written by the Fund on a security is “covered” if the Fund segregates or earmarks assets determined to be liquid by the Sub-Adviser, as described above, equal to the exercise price. A put option is also covered if the Fund holds a put on the same security as the put written where the exercise price of the put held is (i) equal to or greater than the exercise price of the put written, or (ii) less than the exercise price of the put written, provided the difference is maintained by the Fund in segregated or earmarked assets determined to be liquid by the Sub-Adviser, as described above.

The Fund may sell put and call options on indices of securities. Options on an index differ from options on securities because (i) the exercise of an index option requires cash payments and does not involve the actual purchase or sale of securities, (ii) the holder of an index option has the right to receive cash upon exercise of the option if the level of the index upon which the option is based is greater, in the case of a call, or less, in the case of a put, than the exercise price of the option and (iii) index options reflect price-fluctuations in a group of securities or segments of the securities market rather than price fluctuations in a single security.

Restricted and Illiquid Securities. The Fund may invest in securities for which there is no readily available trading market or that are otherwise illiquid. Illiquid securities include securities legally restricted as to resale, such as commercial paper issued pursuant to Section 4(2) of the Securities Act of 1933, as amended (the “Securities Act”), and securities eligible for resale pursuant to Rule 144A thereunder. Section 4(2) and Rule 144A securities may, however, be treated as liquid by the Investment Adviser pursuant to procedures adopted by the Fund’s Board of Trustees, which require consideration of factors such as trading activity, availability of market quotations and number of dealers willing to purchase the security. If the Fund invests in Rule 144A securities, the level of portfolio illiquidity may be increased to the extent that eligible buyers become uninterested in purchasing such securities.

It may be difficult to sell such securities at a price representing the fair value until such time as such securities may be sold publicly. Where registration is required, a considerable period may elapse between a decision to sell the securities and the time when it would be permitted to sell. Thus, the Fund may not be able to obtain as favorable a price as that prevailing at the time of the decision to sell. The Fund may also acquire securities through private placements under which it may agree to contractual restrictions on the resale of such securities. Such restrictions might prevent their sale at a time when such sale would otherwise be desirable.

TALF Program

The Fund may invest a portion of its assets through participation in the Term Asset-Backed Securities Loan Facility program (the “TALF Program”), a program developed by the Board of Governors of the Federal Reserve System and the U.S. Department of the Treasury and operated by the Federal Reserve Bank of New York (“FRBNY”). Under the TALF Program, the FRBNY may provide loans to the Fund to purchase certain investment-grade, asset-backed securities which must be backed by auto loans, student loans, credit card loans, small business loans or certain commercial mortgage-backed securities. As of May 31, 2011, the Fund’s borrowings under the TALF Program represented 3.9% of the Fund’s Managed Assets (as defined herein).

In order to obtain a loan under the TALF Program, the Fund is required to put up a certain percentage of the purchase price or value of the eligible collateral (called the “haircut”). In addition, it will be required to pay an administrative fee to the New York Fed on the settlement date of each TALF Program loan received by the Fund. The

interest rate under the loan will vary and will be determined under the terms of the TALF Program. The term of a loan under the TALF Program will depend on the nature of the eligible collateral, and are currently three years or five years.

The Fund pledges eligible collateral, which consists of either certain eligible asset-backed securities that the Fund currently owns or other asset-backed securities that the Fund purchases with the loan proceeds. Except in limited circumstances, TALF loans by the New York Fed to the Fund are non-recourse, and if the Fund does not repay the loan, the New York Fed may enforce its rights only against the eligible collateral pledged by the Fund and not against any other assets of the Fund. TALF loans are prepayable at the option of the Fund without penalty, and the Fund may satisfy its loan obligation in full at any time by surrendering the eligible collateral to the New York Fed. If the securities constituting eligible collateral default and lose all their value, under the current terms of the TALF Program the New York Fed cannot look to the Fund to cover the principal on the loan. Generally, under the terms of the TALF Program a payment of principal on eligible collateral must be used immediately to reduce the principal amount of the

TALF loan in proportion to the haircut (for example, if the original haircut was 10%, 90% of any principal repaid must be immediately paid to the New York Fed).

The risk of leverage to the Fund under the TALF Program is the same risk of leverage that applies to other types of borrowings the Fund may engage in. The Fund will borrow under the TALF Program only if it maintains segregated liquid assets (in addition to any assets pledged as eligible collateral), marked-to-market daily, in an amount equal to the Fund's outstanding principal and interest under the TALF loan, treating the loans under the TALF Program similar to other financial instruments (such as reverse repurchase agreements) that obligate a fund to "cover" its obligation to purchase or deliver cash or securities at a future time.

The New York Fed reserves the right to reject any request for a loan, in whole or in part, in its sole discretion, even if the Fund meets all requirements of the TALF Program. The Federal Reserve may also change the terms of the TALF Program at its discretion. While the current terms of the TALF Program state that amendments will only apply to future participations, there is no guarantee that retroactive changes to the TALF Program will not occur. The Fund cannot predict the form any such changes or modifications might take and, if the Fund participates in the TALF Program, such changes may adversely affect the value of the Fund's assets and the ability of the Fund to achieve its investment objectives. Any changes to the TALF Program may, among other things, further limit or expand the types of securities that may be purchased with the proceeds of a TALF Program loan.

Participation in the TALF Program requires the Fund to contract with a primary dealer that will be authorized to act as agent for the Fund. A primary dealer may receive direct or indirect fees for its services. Any such fees incurred will be borne by the Fund. Under the terms of the TALF Program, any interest and principal payments from TALF eligible collateral will be directed first to a custodial account in the name of the primary dealer prior to remittance to the Fund. As a result, the Fund will be subject to the counterparty risk of the primary dealer. Any voting rights held in respect of TALF eligible collateral under a TALF Program loan currently are subject to the consent of the New York Fed, whose consent must be obtained via the primary dealer, which may delay the Fund's voting ability.

Under certain circumstances, loans under the TALF Program may become recourse to the Fund, which may adversely affect the Fund's ability to achieve its investment objective. In connection with any borrowing by the Fund under the TALF Program, the Fund will be required to represent, among other things, that at the time of borrowing the Fund is an eligible borrower and that the collateral is eligible collateral. A determination that the Fund is, at any time, not an eligible borrower (based on the criteria that is applicable at the time of borrowing), or a determination that certain representations made by the Fund under the TALF Program were untrue when made, will cause the loan to become full recourse to the Fund, and the Fund must then repay the loan or surrender the eligible collateral at a time when it may not be advantageous to do so, which may result in losses to the Fund. Additionally, the loan may become recourse to the Fund if certain persons acquire more than 25% of the Fund's outstanding securities or if the Fund fails to make certain timely filings under the TALF Program. If loans under the TALF Program become recourse against the Fund and the value of the eligible collateral pledged to the New York Fed does not at least equal the amount of principal and interest the Fund owes to the New York Fed under the loan, then the Fund will be required to pay the difference to the New York Fed. In order to make this payment, the Fund may be required to sell portfolio securities during adverse market conditions or at other times it would not otherwise choose to sell such securities. Finally, if the Fund were to surrender its eligible collateral under the terms of the TALF Program, it would lose the amount of the haircut.

Under the terms of its agreement with the Fund, the primary dealer generally disclaims all liability for losses that may occur in connection with the TALF Program, the risk of which is borne by the Fund. Further, the Fund indemnifies for any losses that the primary dealer may incur under the terms of the TALF Program. The primary dealer may terminate its agreement with the Fund at any time. If the Fund is not able to find a replacement primary dealer within the requisite period of time, it may be required to either repay the loan, sell the eligible collateral, or surrender the eligible collateral at a time when it may not be advantageous to do so, which may result in losses to the Fund. Agreements with the primary dealer are subject to amendment by the primary dealer without the Fund's consent, in order to conform to any future amendments of the TALF Program by the Federal Reserve.

Derivative Transactions

The Fund may, but is not required to, use various strategic transactions in futures, options and other derivative contracts in order to earn income, facilitate portfolio management and mitigate risks. These strategies may be executed through the use of derivative contracts. In the course of pursuing these investment strategies, the Fund may purchase and

sell exchange-listed and over-the-counter put and call options on securities, equity and fixed-income indices and other instruments, purchase and sell futures contracts and options thereon, and enter into various transactions such as swaps, caps, floors or collars. In addition, derivative transactions may also include new techniques, instruments or strategies that are permitted as regulatory changes occur. In order to protect the soundness of derivative transactions and outstanding derivative positions, the Sub-Adviser generally requires derivative counterparties to have a minimum credit rating of A from Moody's (or a comparable rating from another rating agency) and monitors such rating on an ongoing basis. In addition, the Sub-Adviser seeks to allocate derivative transactions to limit exposure to any single counterparty. The Fund has not adopted a maximum percentage limit with respect to derivative investments. However, the maximum level of and types of derivative transactions used by the Fund will be approved by the Board of Trustees and the Board of Trustees will receive regular reports from the Investment Adviser and the Sub-Adviser regarding the Fund's use of derivative instruments and the effect of derivative transactions on the management of the Fund's portfolio and the performance of the Fund. For a more complete discussion of the Fund's investment practices involving transactions in derivatives and certain other investment techniques, see "Investment Objective and Policies Derivative Instruments" in the Fund's SAI.

Temporary Defensive Investments

At any time when a temporary defensive posture is believed by the Investment Adviser to be warranted (a "temporary defensive period"), the Fund may, without limitation, hold cash or invest its assets in money market instruments and repurchase agreements in respect of those instruments. The money market instruments in which the Fund may invest are obligations of the U.S. government, its agencies or instrumentalities; commercial paper rated A-1 or higher by S&P or Prime-1 by Moody's; and certificates of deposit and bankers' acceptances issued by domestic branches of U.S. banks that are members of the Federal Deposit Insurance Corporation. During a temporary defensive period, the Fund may also invest in shares of money market mutual funds. Money market mutual funds are investment companies, and the investments in those companies by the Fund are in some cases subject to certain fundamental investment restrictions and applicable law. See "Investment Restrictions" in the Fund's SAI. As a shareholder in a mutual fund, the Fund will bear its ratable share of its expenses, including management fees, and will remain subject to payment of the fees to the Investment Adviser, with respect to assets so invested. See "Management of the Fund." The Fund may not achieve its investment objective during a temporary defensive period or be able to sustain its historical distribution levels.

Certain Other Investment Practices

When Issued, Delayed Delivery Securities and Forward Commitments. The Fund may enter into forward commitments for the purchase or sale of securities, including on a "when issued" or "delayed delivery" basis, in excess of customary settlement periods for the type of security involved. In some cases, a forward commitment may be conditioned upon the occurrence of a subsequent event, such as approval and consummation of a merger, corporate reorganization or debt restructuring (i.e., a when, as and if issued security). When such transactions are negotiated, the price is fixed at the time of the commitment, with payment and delivery taking place in the future, generally a month or more after the date of the commitment. While it will only enter into a forward commitment with the intention of actually acquiring the security, the Fund may sell the security before the settlement date if it is deemed advisable. Securities purchased under a forward commitment are subject to market fluctuation, and no interest (or dividends) accrues to the Fund prior to the settlement date. The Fund will segregate with its custodian cash or liquid securities in an aggregate amount at least equal to the amount of its outstanding forward commitments.

Loans of Portfolio Securities. To increase income, the Fund may lend its portfolio securities to securities broker-dealers or financial institutions if (i) the loan is collateralized in accordance with applicable regulatory requirements and (ii) no loan will cause the value of all loaned securities to exceed $33 \frac{1}{3} \%$ of the value of the Fund's total assets. If the borrower fails to maintain the requisite amount of collateral, the loan automatically terminates and the Fund could use the collateral to replace the securities while holding the borrower liable for any excess of replacement cost over the value of the collateral. As with any extension of credit, there are risks of delay in recovery and in some cases even loss of rights in collateral should the borrower of the securities fail financially. There can be no assurance that borrowers will not fail financially. On termination of the loan, the borrower is required to return the securities to the Fund, and any gain or loss in the market price during the period of the loan would inure to the Fund. If the other party to the loan petitions for bankruptcy or becomes subject to the United States Bankruptcy Code, the law regarding the rights of the Fund is unsettled. As a result, under extreme circumstances, there may be a restriction on the Fund's ability to sell the collateral and the Fund would suffer a loss. See "Investment Objective and Policies Loans of Portfolio Securities" in the Fund's SAI.

Repurchase Agreements. Repurchase agreements may be seen as loans by the Fund collateralized by underlying debt securities. Under the terms of a typical repurchase agreement, the Fund would acquire an underlying debt obligation for a relatively short period (usually not more than one week) subject to an obligation of the seller to repurchase, and the Fund to resell, the obligation at an agreed price and time. This arrangement results in a fixed rate of return to the Fund that is not subject to market fluctuations during the holding period. The Fund bears a risk of loss in the event that the other party to a repurchase agreement defaults on its obligations and the Fund is delayed in or prevented from exercising its rights to dispose of the collateral securities, including the risk of a possible decline in the value of the underlying securities during the period in which it seeks to assert these rights. The Sub-Adviser, acting under the supervision of the Board of Trustees of the Fund, reviews the creditworthiness of those banks and dealers with which the Fund enters into repurchase agreements to evaluate these risks and monitors on an ongoing basis the value of the securities subject to repurchase agreements to ensure that the value is maintained at the required level. The Fund will not enter into repurchase agreements with the Investment Adviser, the Sub-Adviser or their affiliates.

Reverse Repurchase Agreements. The Fund may enter into reverse repurchase agreements. Under a reverse repurchase agreement, the Fund temporarily transfers possession of a portfolio instrument to another party, such as a bank or broker-dealer, in return for cash. At the same time, the Fund agrees to repurchase the instrument at an agreed upon time (normally within seven days) and price, which reflects an interest payment. The Fund may enter into such agreements when it is able to invest the cash acquired at a rate higher than the cost of the agreement, which would increase earned income. When the Fund enters into a reverse repurchase agreement, any fluctuations in the market value of either the instruments transferred to another party or the instruments in which the proceeds may be invested would affect the market value of the Fund's assets. As a result, such transactions may increase fluctuations in the market value of the Fund's assets. While there is a risk that large fluctuations in the market value of the Fund's assets could affect net asset value, this risk is not significantly increased by entering into reverse repurchase agreements, in the opinion of the Sub-Adviser. Because reverse repurchase agreements may be considered to be the practical equivalent of borrowing funds, they constitute a form of leverage. Such agreements will be treated as subject to investment restrictions regarding "borrowings." If the Fund reinvests the proceeds of a reverse repurchase agreement at a rate lower than the cost of the agreement, entering into the agreement will lower the Fund's cash available for distribution. The Sub-Adviser generally requires counterparties to reverse repurchase transactions to have a minimum credit rating of A from Moody's (or a comparable rating from another rating agency) and monitors such rating on an ongoing basis.

Portfolio Turnover

The Fund will buy and sell securities to seek to accomplish its investment objective. Portfolio turnover generally involves some expense to the Fund, including brokerage commissions or dealer mark-ups and other transaction costs on the sale of securities and reinvestment in other securities. The portfolio turnover rate is computed by dividing the lesser of the amount of the securities purchased or securities sold by the average monthly value of securities owned during the year (excluding securities whose maturities at acquisition were one year or less). The Fund's portfolio turnover rate may vary greatly from year to year. Higher portfolio turnover may decrease the after-tax return to individual investors in the Fund to the extent it results in a decrease of the long-term capital gains portion of distributions to shareholders. For the fiscal years ended May 31, 2011 and May 31, 2010, the Fund's portfolio turnover rate was 64% and 67%, respectively.

Investment Restrictions

The Fund has adopted certain other investment limitations designed to limit investment risk. These limitations are fundamental and may not be changed without the approval of the holders of a majority of the outstanding Common Shares, as defined in the 1940 Act (and preferred shares, if any, voting together as a single class). See “Investment Restrictions” in the SAI for a complete list of the fundamental investment policies of the Fund.

USE OF FINANCIAL LEVERAGE

The Fund may seek to enhance the level of its current distributions by utilizing financial leverage through the issuance of preferred shares (“Preferred Shares”), through borrowing or the issuance of commercial paper or other forms of debt (“Borrowings”), through reverse repurchase agreements, dollar rolls or similar transactions or through a combination of the foregoing (collectively “Financial Leverage”). The Fund’s total Financial Leverage may vary over time; however, the aggregate amount of Financial Leverage is not currently expected to exceed $33 \frac{1}{3} \%$ of the Fund’s Managed Assets after such issuance and/or borrowing; however, the Fund may utilize Financial Leverage up to the

48

limits imposed by the 1940 Act. Under the 1940 Act, the Fund may utilize Financial Leverage in the form of Borrowings in an aggregate amount up to $33 \frac{1}{3} \%$ of the Fund's Managed Assets (including the proceeds of such Financial Leverage) immediately after such Borrowings. Under the 1940 Act, the Fund may utilize Financial Leverage in the form of Preferred Shares in an aggregate amount of up to 50% of the Fund's total assets (including the proceeds of such Financial Leverage) immediately after such issuance. With respect to Financial Leverage incurred through investments in reverse repurchase agreements, dollar rolls or similar transactions, the Fund intends to earmark or segregate cash or liquid securities in accordance with applicable interpretations of the Staff of the Securities and Exchange Commission (the "SEC"). As a result of such segregation, the Fund's obligations under such transactions will not be considered senior securities representing indebtedness for purposes of the 1940 Act. Therefore, the Fund's ability to utilize Financial Leverage through such transactions will not be limited by the 1940 Act, but will be limited by the Fund's maximum overall leverage levels approved by the Board of Trustees (currently $33 \frac{1}{3} \%$ of the Fund's Managed Assets) and may be limited by the availability of cash or liquid securities to earmark or segregate in connection with such transactions. The Fund may also utilize Borrowings in for temporary purposes such as the settlement of transactions as permitted by the 1940 Act. So long as the net rate of return on the Fund's investments purchased with the proceeds of Financial Leverage exceeds the cost of such Financial Leverage, such excess amounts will be available to pay higher distributions to holders of the Fund's Common Shares. Any use of Financial Leverage must be approved by the Fund's Board of Trustees. There can be no assurance that a leveraging strategy will be implemented or that it will be successful during any period during which it is employed.

The Fund has entered into a committed facility agreement with BNP Paribas Prime Brokerage, Inc. ("BNP Paribas") pursuant to which the Fund may borrow up to \$30 million. As of May 31, 2011, outstanding Borrowings under the committed facility agreement were approximately \$22.4 million, which represented approximately 8.4% of the Fund's Managed Assets as of such date. The Fund invests a portion of its Managed Assets through participation in the Term Asset-Backed Securities Loan Facility program (the "TALF Program"), a program developed by the Board of Governors of the Federal Reserve System and the U.S. Department of the Treasury and operated by the Federal Reserve Bank of New York ("FRBNY"). Under the TALF Program, the FRBNY may provide loans to the Fund to purchase certain investment-grade, asset-backed securities which must be backed by auto loans, student loans, credit card loans, small business loans or certain commercial mortgage-backed securities. As of May 31, 2011, the Fund's borrowings under the TALF Program represented approximately 3.9% of the Fund's Managed Assets. In addition, as of May 31, 2011, the Fund had reverse repurchase agreements outstanding representing Financial Leverage equal to approximately 17.8% of the Fund's Managed Assets. As of May 31, 2011, the Fund's total Financial Leverage represented approximately 30.1% of the Fund's Managed Assets.

Borrowing

As noted above, the Fund is authorized to borrow or issue debt securities for financial leveraging purposes and for temporary purposes such as the settlement of transactions. Under the 1940 Act, the Fund generally is not permitted to issue commercial paper or notes or engage in other Borrowings unless, immediately after the Borrowing, the value of the Fund's total assets less liabilities other than the principal amount represented by commercial paper, notes or other Borrowings, is at least 300% of such principal amount. In addition, the Fund is not permitted to declare any cash dividend or other distribution on the Common Shares unless, at the time of such declaration, the value of the Fund's total assets, less liabilities other than the principal amount represented by Borrowings, is at least 300% of such principal amount after deducting the amount of such dividend or other distribution. If the Fund borrows, the Fund intends, to the extent possible, to prepay all or a portion of the principal amount of any outstanding commercial paper, notes or other Borrowings to the extent necessary to maintain the required asset coverage.

The terms of any such Borrowings may require the Fund to pay a fee to maintain a line of credit, such as a commitment fee, or to maintain minimum average balances with a lender. Any such requirements would increase the cost of such Borrowings over the stated interest rate. Such lenders would have the right to receive interest on and repayment of principal of any such Borrowings, which right will be senior to those of the Common Shareholders. Any such Borrowings may contain provisions limiting certain activities of the Fund, including the payment of dividends to Common Shareholders in certain circumstances. Any Borrowings will likely be ranked senior or equal to all other existing and future Borrowings of the Fund.

Certain types of Borrowings subject the Fund to covenants in credit agreements relating to asset coverage and portfolio composition requirements. Certain Borrowings issued by the Fund also may subject the Fund to certain

restrictions on investments imposed by guidelines of one or more rating agencies, which may issue ratings for such Borrowings. Such guidelines may impose asset coverage or portfolio composition requirements that are more stringent than those imposed by the 1940 Act. It is not anticipated that these covenants or guidelines will impede the Sub-Adviser from managing the Fund's portfolio in accordance with the Fund's investment objective and policies.

The 1940 Act grants to the holders of senior securities representing indebtedness issued by the Fund, under certain circumstances, certain voting rights in the event of default in the payment of interest on or repayment of principal. Failure to maintain certain asset coverage requirements could result in an event of default and entitle the debt holders to elect a majority of the Board of Trustees.

The Fund has entered into a committed facility agreement with BNP Paribas, dated as of November 20, 2008, amended August 5, 2009, pursuant to which the Fund may borrow up to \$30 million. Borrowings under the committed facility are collateralized with portfolio securities which are held in a segregated account for the benefit of BNP Paribas at the Fund's custodian, which collateral exceeds the amount borrowed. Interest payable by the Fund on Borrowings under the committed facility agreement is based on the three-month London Interbank Offered Rate (LIBOR) plus 85 basis points. An unused commitment fee of 0.75% is charged on the difference between the \$30,000,000 committed facility and the amount borrowed. The Fund's Borrowings under the committed facility are collateralized by portfolio assets which are maintained by the Fund in a separate account with the Fund's custodian for the benefit of the lender. Securities deposited in the collateral account may be rehypothecated by BNP Paribas Prime Brokerage, Inc. In the event of a default by the Fund under the committed facility, the lender has the right to sell such collateral assets to satisfy the Fund's obligation to the lender. The amounts drawn under the committed facility may vary over time and such amounts will be reported in the Fund's audited and unaudited financial statements contained in the Fund's annual and semi-annual reports to shareholders. On May 31, 2011, outstanding Borrowings under the committed facility agreement were approximately \$22.4 million.

Reverse Repurchase Agreements

Borrowings may be made by the Fund through reverse repurchase agreements under which the Fund sells portfolio securities to financial institutions such as banks and broker-dealers and agrees to repurchase them at a particular date and price. Such agreements are considered to be borrowings under the 1940 Act. The Fund may utilize reverse repurchase agreements when it is anticipated that the interest income to be earned from the investment of the proceeds of the transaction is greater than the interest expense of the transaction.

Dollar Roll Transactions

Borrowings may be made by the Fund through dollar roll transactions. A dollar roll transaction involves a sale by the Fund of a mortgage-backed or other security concurrently with an agreement by the Fund to repurchase a similar security at a later date at an agreed-upon price. The securities that are repurchased will bear the same interest rate and stated maturity as those sold, but pools of mortgages collateralizing those securities may have different prepayment histories than those sold. During the period between the sale and repurchase, the Fund will not be entitled to receive interest and principal payments on the securities sold. Proceeds of the sale will be invested in additional instruments for the Fund, and the income from these investments will generate income for the Fund. If such income does not exceed the income, capital appreciation and gain or loss that would have been realized on the securities sold as part of

the dollar roll, the use of this technique will diminish the investment performance of the Fund compared with what the performance would have been without the use of dollar rolls.

Effects of Financial Leverage

Assuming the Fund's total Financial Leverage represented approximately 30.1% of the Fund's Managed Assets and interest costs to the Fund at a combined average annual rate of 1.95% with respect to such Financial Leverage, then the incremental income generated by the Fund's portfolio (net of estimated expenses including expenses related to the Financial Leverage) must exceed approximately .59% to cover such interest expense. Of course, these numbers are merely estimates used for illustration. The amount of Financial Leverage used by the Fund as well as actual interest expenses on such Financial Leverage will vary.

The following table is furnished pursuant to requirements of the Securities and Exchange Commission (the "SEC"). It is designed to illustrate the effect of leverage on Common Share total return, assuming investment portfolio total returns (comprised of income, net expenses and changes in the value of investments held in the Fund's portfolio) of -10%, -5%, 0%, 5% and 10%. These assumed investment portfolio returns are hypothetical figures and are not

necessarily indicative of what the Fund's investment portfolio returns will be. The table further assumes Financial Leverage representing approximately 30.1% of the Fund's Managed Assets and interest costs to the Fund at a combined average annual rate of 1.95% with respect to such Financial Leverage.

Assumed portfolio total return (net of expenses)	(10.00)%	(5.00)%	0.00%	5.00%	10.00%
Common Share total return	(15.15)%	(7.99)%	(.84)%	6.31%	13.47%

Common Share total return is composed of two elements—the Common Share dividends paid by the Fund (the amount of which is largely determined by the Fund's net investment income after paying the carrying cost of Financial Leverage) and realized and unrealized gains or losses on the value of the securities the Fund owns. As required by SEC rules, the table assumes that the Fund is more likely to suffer capital loss than to enjoy capital appreciation. For example, to assume a total return of 0%, the Fund must assume that the net investment income it receives on its investments is entirely offset by losses on the value of those investments. This table reflects the hypothetical performance of the Fund's portfolio and not the performance of the Fund's Common Shares, the value of which will be determined by market and other factors.

During the time in which the Fund is utilizing Financial Leverage, the amount of the fees paid to the Investment Adviser and the Sub-Adviser for investment advisory services will be higher than if the Fund did not utilize Financial Leverage because the fees paid will be calculated based on the Fund's Managed Assets, which may create a conflict of interest between the Investment Adviser and the Sub-Adviser and the Common Shareholders. In order to manage this conflict of interest, the Board of Trustees will receive regular reports from the Investment Adviser and the Sub-Adviser regarding the Fund's use of Financial Leverage and the effect of Financial Leverage on the management of the Fund's portfolio and the performance of the Fund. Because the Financial Leverage costs will be borne by the Fund at a specified rate, only the Fund's Common Shareholders will bear the cost of the Fund's fees and expenses.

Interest Rate Transactions

In connection with the Fund's use of Financial Leverage, the Fund may enter into interest rate swap or cap transactions. Interest rate swaps involve the Fund's agreement with the swap counterparty to pay a fixed-rate payment in exchange for the counterparty's paying the Fund a variable rate payment that is intended to approximate all or a portion of the Fund's variable-rate payment obligation on the Fund's Financial Leverage. The payment obligation would be based on the notional amount of the swap, which will not exceed the amount of the Fund's Financial Leverage.

The Fund may use an interest rate cap, which would require it to pay a premium to the cap counterparty and would entitle it, to the extent that a specified variable-rate index exceeds a predetermined fixed rate, to receive payment from the counterparty of the difference based on the notional amount. The Fund would use interest rate swaps or caps only with the intent to reduce or eliminate the risk that an increase in short-term interest rates could have on Common Share net earnings as a result of leverage.

The Fund will usually enter into swaps or caps on a net basis; that is, the two payment streams will be netted out in a cash settlement on the payment date or dates specified in the instrument, with the Fund's receiving or paying, as the case may be, only the net amount of the two payments. The Fund intends to segregate cash or liquid securities having a value at least equal to the Fund's net payment obligations under any swap transaction, marked to market daily. The Fund will treat such amounts as illiquid.

The use of interest rate swaps and caps is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio security transactions. Depending on the state of interest rates in general, the Fund's use of interest rate instruments could enhance or harm the overall performance of the Common Shares. To the extent there is a decline in interest rates, the net amount receivable by the Fund under the interest rate swap or cap could decline and could thus result in a decline in the net asset value of the Common Shares. In addition, if short-term interest rates are lower than the Fund's fixed rate of payment on the interest rate swap, the swap will reduce Common Share net earnings if the Fund must make net payments to the counterparty. If, on the other hand, short-term interest rates are higher than the fixed rate of payment on the interest rate swap, the swap will enhance Common Share net earnings if the Fund receives net payments from the counterparty. Buying interest rate caps could enhance the performance of the Common Shares by limiting the Fund's maximum leverage expense. Buying interest rate caps could also decrease the net earnings of the Common Shares if the premium paid by the Fund

to the counterparty exceeds the additional cost of the Financial Leverage that the Fund would have been required to pay had it not entered into the cap agreement.

Interest rate swaps and caps do not involve the delivery of securities or other underlying assets or principal. Accordingly, the risk of loss with respect to interest rate swaps is limited to the net amount of interest payments that the Fund is contractually obligated to make. If the counterparty defaults, the Fund would not be able to use the anticipated net receipts under the swap or cap to offset the costs of the Financial Leverage. Depending on whether the Fund would be entitled to receive net payments from the counterparty on the swap or cap, which in turn would depend on the general state of short-term interest rates at that point in time, such a default could negatively impact the performance of the Common Shares.

Although this will not guarantee that the counterparty does not default, the Fund will not enter into an interest rate swap or cap transaction with any counterparty that the Sub-Adviser believes does not have the financial resources to honor its obligation under the interest rate swap or cap transaction. Further, the Sub-Adviser will regularly monitor the financial stability of a counterparty to an interest rate swap or cap transaction in an effort to proactively protect the Fund's investments.

In addition, at the time the interest rate swap or cap transaction reaches its scheduled termination date, there is a risk that the Fund will not be able to obtain a replacement transaction or that the terms of the replacement will not be as favorable as on the expiring transaction. If this occurs, it could have a negative impact on the performance of the Common Shares.

The Fund may choose or be required to redeem some or all Fund Preferred Shares or prepay any Borrowings. Such a redemption or prepayment would likely result in the Fund's seeking to terminate early all or a portion of any swap or cap transaction. Such early termination of a swap could result in a termination payment by or to the Fund. An early termination of a cap could result in a termination payment to the Fund. There may also be penalties associated with early termination.

RISKS

Investors should consider the following risk factors and special considerations associated with investing in the Fund. An investment in the Fund is subject to investment risk, including the possible loss of the entire principal amount invested.

Not a Complete Investment Program

An investment in the Common Shares of the Fund should not be considered a complete investment program. The Fund is intended for long-term investors seeking current income and capital appreciation. The Fund is not meant to provide a vehicle for those who wish to play short-term swings in the stock market. Each Common Shareholder should take into account the Fund's investment objective as well as the Common Shareholder's other investments when considering an investment in the Fund.

Investment and Market Risk

An investment in Common Shares of the Fund is subject to investment risk, including the possible loss of the entire principal amount that you invest. An investment in the Common Shares of the Fund represents an indirect investment in the securities owned by the Fund. The value of those securities may fluctuate, sometimes rapidly and unpredictably. The value of the securities owned by the Fund will affect the value of the Common Shares. At any point in time, your Common Shares may be worth less than your original investment, including the reinvestment of Fund dividends and distributions.

Management Risk

The Fund is subject to management risk because it has an actively managed portfolio. The Investment Adviser and the Sub-Adviser will apply investment techniques and risk analyses in making investment decisions for the Fund, but there can be no guarantee that these will produce the desired results.

Income Risk

The income investors receive from the Fund is based primarily on the interest it earns from its investments in Income Securities, which can vary widely over the short and long-term. If prevailing market interest rates drop,

investors' income from the Fund could drop as well. The Fund's income could also be affected adversely when prevailing short-term interest rates increase and the Fund is utilizing leverage, although this risk is mitigated to the extent the Fund's investments include floating-rate obligations.

Dividend Risk

Dividends on common stock and other Common Equity Securities which the Fund may hold are not fixed but are declared at the discretion of an issuer's board of directors. There is no guarantee that the issuers of the equity securities in which the Fund invests will declare dividends in the future or that, if declared, they will remain at current levels or increase over time. The dividend income from the Fund's investment in Common Equity Securities will be influenced by both general economic activity and issuer-specific factors. In the event of adverse changes in economic conditions or adverse events effecting a specific industry or issuer, the issuers of the Common Equity Securities held by the Fund may reduce the dividends paid on such securities.

Income Securities Risk

In addition to the risks discussed above, Income Securities, including high-yield bonds, are subject to certain risks, including:

Issuer Risk. The value of Income Securities may decline for a number of reasons which directly relate to the issuer, such as management performance, financial leverage and reduced demand for the issuer's goods and services.

Credit Risk. Credit risk is the risk that one or more debt obligations in the Fund's portfolio will decline in price, or fail to pay interest or principal when due, because the issuer of the obligation experiences a decline in its financial status.

Interest Rate Risk. Interest rate risk is the risk that Income Securities will decline in value because of changes in market interest rates. When market interest rates rise, the market value of Income Securities generally will fall. During periods of rising interest rates, the average life of certain types of Income Securities may be extended because of slower than expected prepayments. This may lock in a below market yield, increase the security's duration and reduce the value of the security. Investments in Income Securities with long-term maturities may experience significant price declines if long-term interest rates increase.
