Fund, Inc.

Third Quarter Report

SEPTEMBER 30, 2009

Lazard Global Total Return & Income Fund, Inc.

Investment Overview

Dear Stockholders,

We are pleased to present this third quarter report for Lazard Global Total Return and Income Fund, Inc. (LGI or the Fund), for the period ended September 30, 2009. LGI is a diversified, closed-end management investment company that began trading on the New York Stock Exchange (NYSE) on April 28, 2004. Its ticker symbol is LGI.

As of September 30, 2009, the Fund's net asset value (NAV) performance year-to-date lagged its benchmark, the Morgan Stanley Capital International (MSCI®) World® Index (the Index), in a period of global market strength. However, we are pleased with LGI's favorable NAV performance since inception. We believe that the Fund has provided investors with an attractive yield and diversification, backed by the extensive experience, commitment, and professional management of Lazard Asset Management LLC (the Investment Manager or Lazard).

Portfolio Update (as of September 30, 2009)

During the third quarter of 2009, the Fund's NAV increased 16.1%, underperforming the Index return of 17.5%. The year-to-date NAV return (ended September 30, 2009) of 20.2% also lagged the Index return of 24.9%. However, over the last three years, the NAV annualized loss of 2.5% outperformed the Index decline of 4.4%. Similarly, the Fund's since inception annualized NAV gain of 4.8% has also outpaced the Index, which gained 3.1% over the same period. Shares of LGI ended the third quarter of 2009 with a market price of \$14.17, representing a 14.5% discount to the Fund's NAV of \$16.58.

The Fund's net assets were \$159.2 million as of September 30, 2009, with total leveraged assets of \$208.6 million, representing a 23.7% leverage rate. This leverage rate is an increase from the level at the end of the second quarter (of 17.9%), but well below the Fund's historical level since inception (of approximately 30%). Recall that we actively reduced the leverage level for LGI (and thereby, the exposure to the local currency and debt portfolio) in the second half of 2008, and since then we have begun to redeploy that capital slowly, beginning in April 2009, and, thereby, increase leverage again.

We believe that LGI's investment thesis remains sound, as demonstrated by the Fund's favorable relative performance since inception. Within the global equity portfolio, stock selection in the consumer staples and health care sectors helped performance during the quarter, while a high exposure to, and stock selection in, the information technology sector, and stock selection in the diversified financials and banks segments of the financials sector detracted from performance. The smaller, short-duration¹ emerging market currency and debt portion of the Fund managed to produce a very strong positive performance during the third quarter in a recovering global market environment. This portfolio has also been a positive contributor to performance for the Fund since inception.

As of September 30, 2009, 73.0% of the Fund's total leveraged assets consisted of global equities and 26.5% consisted of emerging market currency and debt instruments, while the remaining 0.5% consisted of cash and other net assets.

Declaration of Distributions

Pursuant to LGI's level distribution policy, in September the Fund declared a monthly distribution of \$0.07594 per share on the Fund's outstanding company stock. The annualized dividend distribution amount equals 6.25% of the Fund's net asset value per share as of December 31, 2008, which was \$14.58. The current distribution rate is 6.4%, based on the annualized current distribution and the share price of \$14.17 at the close of NYSE trading on September 30, 2009. It is expected that a substantial portion of the 2009 distributions will be a return of capital.

Additional Information

Please note that available on www.LazardNet.com are frequent updates on the Fund's performance, press releases, distribution information, and a monthly fact

Message from the Portfolio Managers

Global Equity Portfolio

(73.0% of total leveraged assets)

The Fund's global equity portfolio is invested primarily in equity securities of large, well-known global companies with strong financial productivity at attractive valuations. Examples include GlaxoSmithKline, a global research-based pharmaceutical company based in the United Kingdom; Bank of New York Mellon, a U.S. based company that provides financial products and services for institutions and individuals worldwide; Nokia Corp., a Finland-based manufacturer of mobile telephones; and Total SA, a French energy supplier that explores for, produces, refines, transports, and markets oil and natural gas.

Companies held in the global equity portfolio are all based in developed-market regions around the world. As of September 30, 2009, 41.4% of these stocks were based in North America, 28.2% were based in Continental Europe (not including the United Kingdom), 20.9% were from the United Kingdom, 6.2% were from Japan, and 3.3% were from the rest of Asia (not including Japan). The global equity portfolio is similarly well diversified across a number of industry sectors. The top two sectors, by weight, at September 30, 2009, were financials (20.8%), which includes banks, insurance companies, and financial services companies, and health care (18.1%), a sector that encompasses industries involved in providing health care equipment, services, and technology. Other sectors in the portfolio include consumer discretionary, consumer staples, energy, information technology, industrials, materials, and telecommunication services. The average dividend yield on the securities held in the global equity portfolio was approximately 2.8% as of September 30, 2009.

Global Equity Markets Review

Optimism about the outlook for the global economy led to an extended rally in virtually all assets during the third quarter, and stock markets continued their strong rally after bottoming in March of this year. However, while global stocks have risen significantly, they remain well below the peak reached in October 2007. Yields on short-dated government paper remained low on expectations that policymakers around the world will continue to be committed to maintaining a stimulative monetary policy. In the U.S., the housing market showed further signs of stabilization, helped by government incentives for first-time home buyers and low borrowing costs. The recent pickup in home sales and prices also indicated that the housing slump is easing. However, cause for concern remained due to weakness in consumer spending and uncertainty over the outlook for the labor market. European stocks were among the strongest performers, as France and Germany, the two largest economies in the region, returned to economic growth in the second quarter. Signs of recovery in the housing market in the UK also set a positive tone for its stock market, with financial stocks leading the rally. Asian markets followed their U.S. and European peers higher, partially supported by a rebound in Chinese stocks, as the economy in China appeared to gather speed. Equities in Japan, however, lagged amid uncertainty over the new government's economic policy. The strengthening yen also fueled concern about the country's export-dependent economy. By sector, financial stocks performed strongly, as credit and financial markets continued to normalize and low funding costs continued to help profitability. The materials sector also performed well, as improving sentiment regarding global growth, including China's prospects, boosted commodity prices. Meanwhile, the utilities and energy sectors underperformed during the quarter. In the currency markets, the U.S. dollar weakened relative to both the euro and the Japanese yen. Several comments by the new government

Lazard Global Total Return & Income Fund, Inc.

Investment Overview (continued)

in Japan spurred speculation that it would not oppose a strong yen, which further moved the currency near multi-month highs. The pound sterling was also weak amid continued loose monetary and fiscal policy and remarks by a central bank official that appeared to indicate a weaker currency. The high-yield portion of the global equity markets continued to perform well, as it has since the market bottomed in March 2009.

What Helped and What Hurt LGI

A high exposure to, and stock selection in, the information technology sector detracted from portfolio performance. Positions such as Nokia, IBM, Microsoft, and Oracle hurt performance. Stock selection in the financials sector was more mixed. In the insurance segment, strong performance by Zurich Financial Services contributed to returns, while exposure to the diversified financials and banks segments detracted from performance, as Sumitomo Mitsui Financial Group and Nomura Holdings underperformed. In contrast, the portfolio benefited from stock selection in the consumer staples sector, as positions in Diageo and Heineken contributed to performance.

Emerging Market Currency and Debt Portfolio

(26.5% of total leveraged assets)

The Fund also seeks enhanced income through investing in primarily high-yielding, short-duration emerging market forward currency contracts and local currency debt instruments. As of September 30, 2009, this portfolio consisted of forward currency contracts (51.7%), sovereign debt obligations (45.5%), and a structured note (2.8%). The average duration of the emerging market currency and debt portfolio decreased from approximately 1.8 years to approximately 10.3 months during the quarter, with an average yield on these instruments of 6.6%² as of quarter end.

Note that, during the fourth quarter of 2008, as risk aversion and global U.S. dollar demand spiraled upwards, we significantly reduced the Fund's exposure to the currency and debt portfolio. Subsequently, we have begun to redeploy that capital slowly, beginning in April 2009, and, thereby, increase leverage again. Also, we have significantly reduced the duration on the invested portion of capital, taking profits following the previous quarter's bond purchases.

Emerging Market Currency and Debt Market Review

The third quarter was characterized by a continuation of the improved risk appetite and positive market sentiment that emerged during the second quarter. The rapid moderation of the credit crunch was especially visible in the TED spread's (the spread between inter-bank loans and short-term U.S. government debt) contraction, from last year's explosive 450 basis points to a more typical 20 basis points, and in the continued rally in global credit and in equities, especially bank stocks. The large borrowing needs of the U.S. occupied the market's attention, and with increasing concern about the large holdings of U.S. assets by global central banks, the dollar faced serious pressure. Other major currencies and commodities, such as gold, rallied on the expectation that they would benefit from some foreign exchange (FX) reserve diversification and, in the case of the Japanese yen, also due to the rare occurrence of its short-term inter-bank yields rising above those in the U.S. The rebound in risk appetite and fresh focus on the issues plaguing the dollar meant that emerging economies' capital accounts were robust, experiencing healthy inflows of both cross-border foreign direct investments, as well as overseas portfolio flows. Emerging countries within the Asian region, as well as others around the world, such as Brazil, Chile, and African nations with strong trade and increasing financial linkages with China (through exports of either raw commodities, intermediate goods or machinery), experienced sustained improvement in their trade and financial flow positions.

What Helped and What Hurt LGI

In the third quarter, an improving growth outlook across several emerging market economies, coupled with diminishing market volatility and improved sentiment, were particularly relevant factors behind mater-

Lazard Global Total Return & Income Fund, Inc.

Investment Overview (continued)

ial gains realized in Brazil, Indonesia, Turkey, and Poland. These four countries were the top contributors to quarterly results. Certainly, the position rebuilding across frontier markets (i.e., Zambia, Ghana, Uganda, and Egypt) helped too, especially as Zambia and Uganda produced the highest quarterly return on invested capital. Good intra-regional country selection produced tangible benefits; both Poland and Indonesia were the heaviest weights in their respective regions, and indeed outperformed their neighbors. Lastly, rising oil prices alongside capital account stability yielded a hefty quarterly return on the ruble NDF (non-deliverable forward currency contract) position.

The powerful investor sentiment shift, which buoyed global risk assets, benefited some local currency markets that we believe face structural financing and policy challenges (i.e., South Africa and Colombia), to which we maintained no exposure, thereby limiting our upside. These two relatively high-yielding currencies attracted capital inflows during the third quarter and rallied. Elsewhere, strong FX market intervention out of Asian central banks prevented upside on our renewed exposures to open, export-sensitive Asian economies. Specifically, positions in the Taiwanese dollar and South Korean won hurt performance.

Notes to Investment Overview:

- 1 A measure of the average cash weighted term-to-maturity of the investment holdings. Duration is a measure of the price sensitivity of a bond to interest rate movements. Duration for a forward currency contract is equal to its term-to-maturity.
- 2 The quoted yield does not account for the implicit cost of borrowing on the forward currency contracts, which would reduce the yield shown. All returns reflect reinvestment of all dividends and distributions. Past performance is not indicative, nor a guarantee, of future results.

The performance data of the Index and other market data have been prepared from sources and data that the Investment Manager believes to be reliable, but no representation is made as to their accuracy. The Index represents market value-weighted average returns of selected securities listed on the stock exchanges of Europe, Australasia and the Far East, New Zealand, Canada, and the United States. The Index is unmanaged, has no fees or costs and is not available for investment.

The views of the Fund's management and the portfolio holdings described in this report are as of September 30, 2009; these views and portfolio holdings may have changed subsequent to this date. Nothing herein should be construed as a recommendation to buy, sell, or hold a particular investment. There is no assurance that the portfolio holdings discussed herein will remain in the Fund at the time you receive this report, or that portfolio holdings sold will not have been repurchased. The specific portfolio holdings discussed may in aggregate represent only a small percentage of the Fund's holdings. It should not be assumed that investments identified and discussed were, or will be, profitable, or that the investment decisions we make in the future will be profitable, or equal the performance of the investments discussed herein.

The views and opinions expressed are provided for general information only, and do not constitute specific tax, legal, or investment advice to, or recommendations for, any person. There can be no guarantee as to the accuracy of the outlooks for markets, sectors and securities as discussed herein.

Notes to Portfolio of Investments (continued)

September 30, 2009 (unaudited)

Valuation of Investments:

Market values for securities are generally based on the last reported sales price on the principal exchange or market on which the security is traded, generally as of the close of regular trading on the NYSE (normally 4:00 p.m. Eastern time) on each valuation date. Any securities not listed, for which current over-the-counter market quotations or bids are readily available, are valued at the last quoted bid price or, if available, the mean of two such prices. Forward currency contracts are valued at the current cost of offsetting the contracts. Securities listed on foreign exchanges are valued at the last reported sales price except as described below; securities listed on foreign exchanges that are not traded on the valuation date are valued at the last quoted bid price.

Bonds and other fixed-income securities that are not exchange-traded are valued on the basis of prices provided by pricing services which are based primarily on institutional trading in similar groups of securities, or by using brokers' quotations.

If a significant event materially affecting the value of securities occurs between the close of the exchange or market on which the security is principally traded and the time when the Fund's net asset value is calculated, or when current market quotations otherwise are determined not to be readily available or reliable, such securities will be valued at their fair values as determined by, or in accordance with procedures approved by, the Board of Directors. The Valuation Committee of the Investment Manager may evaluate a variety of factors to determine the fair value of securities for which current market quotations are determined not to be readily available or reliable. These factors include, but are not limited to, the type of security, the value of comparable securities, observations from financial institutions and relevant news events. Input from the Investment Manager's analysts will also be considered.

Fair Value Measurements:

The Fund adopted provisions surrounding Fair Value Measurements and Disclosures, effective January 1, 2008. Fair value is defined as the price that the Fund would receive to sell an asset, or would pay to transfer a liability, in an orderly transaction between market participants at the date of measurement. Fair Value Measurements and Disclosures also establishes a framework for measuring fair value, and a three-level hierarchy for fair value measurement that is based upon the transparency of inputs to the valuation of an asset or liability. Inputs may be observable or unobservable and refer, broadly, to the assumptions that market participants would use in pricing the asset or liability. Observable inputs reflect the assumptions that market participants would use in pricing the asset or liability based on market data obtained from sources independent of the Fund. Unobservable inputs reflect the Fund's own assumptions about the assumptions that market participants would use in pricing the asset or liability, developed based on the best information available in the circumstances. Each investment's fair value measurement level within the fair value hierarchy is based on the lowest level of any input that is significant to the overall fair value measurement. The three-level hierarchy of inputs is summarized below.

Level 1 unadjusted quoted prices in active markets for identical investments

Level 2 other significant observable inputs (including unadjusted quoted prices for similar investments, interest rates, prepayment speeds, credit risk, etc.)

Lazard Global Total Return & Income Fund, Inc.

Notes to Portfolio of Investments (concluded)

September 30, 2009 (unaudited)

Level 3 significant unobservable inputs (including the Fund's own assumptions in determining the fair value of investments) The inputs or methodology used for valuing securities are not necessarily an indication of the risks associated with investing in these securities.

The following table summarizes the valuation of the Fund's investments by each fair value hierarchy level as of September 30, 2009:

| Description | Unadjusted Quoted Prices in Active Markets for Identical Investments (Level 1) | Significant Other Observable Inputs (Level 2) | Significant Unobservable Inputs (Level 3) | Balance as of September 30, 2009 |

Lazard Global Total Return & Income Fund, Inc.

Dividend Reinvestment Plan

(unaudited)

Unless you elect to receive distributions in cash (i.e., opt-out), all dividends, including any capital gain distributions, on your Common Stock will be automatically reinvested by Computershare, Inc., as dividend disbursing agent (the Plan Agent), in additional Common Stock under the Fund's Dividend Reinvestment Plan (the Plan). You may elect not to participate in the Plan by contacting the Plan Agent. If you do not participate, you will receive all distributions in cash, paid by check mailed directly to you by the Plan Agent.

Under the Plan, the number of shares of Common Stock you will receive will be determined on the dividend or distribution payment date, as follows:

- (1) If the Common Stock is trading at or above net asset value at the time of valuation, the Fund will issue new shares at a price equal to the greater of (i) net asset value per Common Share on that date or (ii) 95% of the Common Stock's market price on that date.
- (2) If the Common Stock is trading below net asset value at the time of valuation, the Plan Agent will receive the dividend or distribution in cash and will purchase Common Stock in the open market, on the NYSE or elsewhere, for the participants' accounts. It is possible that the market price for the Common Stock may increase before the Plan Agent has completed its purchases. Therefore, the average purchase price per share paid by the Plan Agent may exceed the market price at the time of valuation, resulting in the purchase of fewer shares than if the dividend or distribution had been paid in Common Stock issued by the Fund. The Plan Agent will use all dividends and distributions received in cash to purchase Common Stock in the open market within 30 days of the valuation date. Interest will not be paid on any uninvested cash payments.

You may withdraw from the Plan at any time by giving written notice to the Plan Agent. If you withdraw or the Plan is terminated, you will receive whole shares in your account under the Plan and you will receive a cash payment for any fraction of a share in your account. If you wish, the Plan Agent will sell your shares and send you the proceeds, minus an initial \$15 service fee plus \$0.12 per share being liquidated (for processing and brokerage expenses).

The Plan Agent maintains all stockholders' accounts in the Plan and gives written confirmation of all transactions in the accounts, including information you may need for tax records. Shares of Common Stock in your account will be held by the Plan Agent in non-certificated form. Any proxy you receive will include all Common Stock you have received under the Plan.

There is no brokerage charge for reinvestment of your dividends or distributions in newly-issued shares of Common Stock. However, all participants will pay a pro rata share of brokerage commissions incurred by the Plan Agent when it makes open market purchases.

Automatically reinvesting dividends and distributions does not mean that you do not have to pay income taxes due upon receiving dividends and distributions.

If you hold your Common Stock with a brokerage firm that does not participate in the Plan, you will not be able to participate in the Plan and any dividend reinvestment may be effected on different terms than those described above. Consult your financial advisor for more information.

The Fund reserves the right to amend or terminate the Plan if, in the judgment of the Board of Directors, the change is warranted. There is no direct service charge to participants in the Plan (other than the service charge when you direct the Plan Agent to sell your Common Stock held in a dividend reinvestment account); however, the Fund reserves the right to amend the Plan to include a service charge payable by the participants. Additional information about the Plan may be obtained from the Plan Agent at P.O. Box 43010, Providence, Rhode Island 02940-3010.
