FORM 6-K

Report of Foreign Private Issuer
Pursuant to Rule 13a-16 or 15d-16
of the
Securities Exchange Act of 1934

For the month of

August 2004

Valley of the Rio Doce Company

(Translation of Registrant's name into English)

Avenida Graça Aranha, No. 26
20005-900 Rio de Janeiro, RJ, Brazil
(Address of principal executive office)

(Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F.)

(Check One) Form 20-F Form 40-F

(Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1))

(Check One) Yes No

(Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7))

(Check One) Yes No

(Indicate by check mark whether the registrant by furnishing the information contained in this Form is also thereby furnishing information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.)

(Check One) Yes No

(If Yes is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b). 82-)

CVRD Production Report for the Second Quarter of 2004

Production continues to grow and iron ore output reaches a new record

Rio de Janeiro, August 03, 2004 Companhia Vale do Rio Doce (CVRD) continued to increase the production of its main products in the second quarter of 2004 (2Q04) in response to the strong growth in global demand for ores and metals. The volume of iron ore produced was the largest in the Company's history.

The Sossego copper mine began its production ramp-up in the quarter. This is a landmark event in the development of the non-ferrous minerals business of CVRD and a new platform for shareholder value creation.

Highlights

Iron Ore record production volumes at all iron ore mining sites

Production reached an all-time high in 2Q04, both in aggregate terms as well as for each of CVRD's iron ore main mining sites Southern System, Carajás and Caemi.

Using the consolidation rules of US GAAP (generally accepted accounting principles in the United States), CVRD's iron ore production rose 9.3%, increasing from 47.152 million tons in 2Q03 (including that of Caemi) to 51.516 million tons in 2Q04. Production in 2Q04 was also 10.7% higher than in the previous quarter (1Q04).

Accumulated production in the first half of 2004 amounted to 98.033 million tons, compared to 90.535 million in the same period last year, despite the shutdown of the Capanema mine in the Southern System, which produced 3.124 million tons in 1H03.

In 2Q04, the annualized production in the Southern System amounted to 98.7 million tons a year, up 9.4% compared to 1Q04 and up 6.1%, compared to the same period in 2003. The production of 24.683 million tons in 2Q04 broke the previous quarterly record, of 24.225 million, achieved in 3Q03.

Iron ore production at Carajás, of 16.255 million tons, achieved significant growth rates compared to 2Q03 (12.8%) and 1Q04 (12.2%) and registered a new record, beating the previous one, of 15.702 million tons, obtained in 4Q03.

Some unexpected problems, which occurred in the beneficiation plant equipment, prevented a better performance. However, the most recent estimates are indicating that the production target for 2004, of 70 million tons, can be achieved.

Caemi achieved record quarterly production of 10.396 million tons, beating the previous record obtained in 3Q03, of 9.449 million tons. Production volumes were up by 12.3%, both compared to the previous quarter and 2Q03.

The Capão Xavier mine started operations in mid-June and its production will be processed by the Mutuca plant. The mine's nominal capacity is 8 million tons a year, which should be reached over the next few years.

Table of Contents

Pellets São Luís plant operating at full capacity

Under the US GAAP criteria, which does not consolidate the joint ventures' output (Samarco, GIIC, Nibrasco, Kobrasco, Hispanobras and Itabrasco), pellet production increased 30.0%, compared to 2Q03, amounting to 4.098 million tons. This sharp increase was influenced by the operation of São Luís at full capacity, which is 6 million tons per year. The plant produced 1.556 million tons in 2Q04, a 13.5% increase qoq.

In 2Q04 CVRD produced 2.054 million tons of blast furnace pellets (BFP) and 2.044 million tons of direct reduction pellets (DRP). Total pellet production grew 9.3% qoq.

According to the BR GAAP criteria (generally accepted accounting principles in Brazil), which includes the volumes produced by the joint ventures in proportion to CVRD's equity stake in the various companies, production in 2Q04 amounted to 8.615 million tons, compared to 7.479 million in 2Q03, an increase of 15.2%.

CVRD produced 5.365 million tons of blast furnace pellets and 3.250 million tons of direct reduction pellets in 2Q04, under BR GAAP accounting principles.

Manganese ore and ferro-alloys furnace maintenance concluded at RDME

Manganese ore production totaled 614,000 tons in 2Q04, down 10.2% yoy, but up 10.4% compared to 1Q04. Accumulated production in the first half of the year amounted to 1.170 million tons, 4.1% higher than in 1H03.

Some mine planning adjustments were made at the Azul mine in Carajás, making it necessary to remove larger quantities of waste, which caused a slowdown in its production rate in 2Q04.

Ferro-alloy production registered an increase of 12.1% in 2Q04, compared to 2Q03, but showed a drop of 15.4%, compared to 1Q04. As previously announced, the electric furnace at RDME was shut down for maintenance between April 7 and June 19, 2004. As a consequence, RDME lost production of 32,000 tons, dropping from 38,000 tons in 1Q04, to just 6,000 tons in 2Q04.

In addition to maintenance, various improvements were made to the furnace at the Dunkerque plant to enhance its safety, while raising productivity. At RDME, an operational unit was brought into service for the production of a high aggregate value type of alloy - Cored Wire. This unit will be supplied with the calcium silicon alloy (CaSi), produced by CVRD at its São João del Rei plant in the state of Minas Gerais, Brazil. The Company is the world's largest producer of CaSi. The investment amounted to only US\$ 3 million. In its first phase, the volume of Cored Wire to be produced will amount to 1,700 tons a year, expected to rise to 7,000 tons by 2007.

The plant at RDMN, in Mo I Rana, Norway, is operating its two furnaces at full capacity. It produced 33,000 tons in 2Q04, the highest volume produced in any quarter since its startup in July 2003.

In 2Q04 CVRD produced 60,000 tons of Ferro Silicon Manganese (FeSiMn), 52,000 tons of High Carbon Ferro Manganese (HCFeMn), 10,000 tons of Medium Carbon Ferro Manganese (MCFeMn) and 9,000 tons of other types of alloys.

Bauxite Trombetas operating at full capacity

Bauxite production in 2Q04 at the Trombetas mining site amounted to 4.056 million tons, in line with nominal production capacity at MRN, of 16.3 million tons a year. The production attributable to CVRD, under the BR GAAP

criteria, proportional to its equity stake of 40% in MRN, amounted to 1.622 million tons.

Table of Contents

Alumina running above nominal capacity

Alumina production reached 615,000 tons of alumina in 2Q04, which is consistent with the nominal capacity of the Alunorte refinery, of 2.4 million tons a year. The volumes reached in 2Q03, of 793,000 tons and in 1Q04, of 648,000 tons, were extraordinarily high, with all the stages of the production chain running at close to full capacity at the same time in order to achieve this, which was extremely difficult to accomplish.

In the first half of the year, accumulated production amounted to 1.263 million tons, 62,000 tons higher than planned, which shows the excellent standard of productivity being achieved at the Alunorte plant.

Primary aluminum Albras speeds up production

Albras produced 109,000 tons of primary aluminum in 2Q04 compared to 108,000 tons in 2Q03, and 102,000 tons in 1Q04. The volume produced in 1H04, of 211,000 tons, was practically the same as that in 1H03, of 213,000 tons.

The need to replace a higher-than-expected number of cells, due to problems caused by a slowdown in operations at the plant as a result of the power rationing enforced by the Brazilian government in the second half of 2001, resulted in a revision of the production program for 2004.

Consequently, the smelter production is likely to be similar to the levels achieved in 2003, of 432,000 tons. This volume exceeds by almost 30,000 tons the nominal capacity determined after the last plant expansion to 406,000 tons.

Copper production ramp-up at Sossego

The second quarter of 2004 marked the entry of CVRD into the global copper market, with the start up of the Sossego copper mine, the only greenfield project launched in the world in 2004.

The ramp-up started in 2Q04, having produced 69,100 dry tons of copper concentrate during the quarter, the equivalent to 20,300 tons of metal, given an average copper content of 29.4%.

Average estimated annual production during the Sossego mine life is 140,000 tons of copper. Bearing in mind the fact that in the initial production phase, the ore is extracted from areas with the highest copper grade, a higher than average production can be expected in 2005.

Potash excellent performance at Taquari-Vassouras

Potash production increased 6.3% in 2Q04, compared to 2Q03. Despite the limitations to the pace of mining operations due to the ongoing capacity expansion work, annualized production in the first half of 2004 amounted to 618,000 tons, higher than the current nominal capacity of the plant, of 600,000 tons.

Kaolin PPSA making use of idle capacity

CVRD's total production of kaolin in 2Q04 amounted to 290,000 tons, in line with the production in 2Q03, of 292,000 tons.

PPSA, which is specialized in the production of high brightness coarse kaolin, continues to successively expand production levels, which amounted to 108,000 tons in 2Q04, an increase of 5.0% yoy. PPSA has the nominal capacity to produce 600,000 tons per year.

This press release may contain statements that express management's expectations about future events or results rather than historical facts. These forward-looking statements involve risks and uncertainties that could cause actual results to differ materially from those projected in forward-looking statements, and CVRD cannot give assurance that such statements will prove correct. These risks and uncertainties include factors: relating to the Brazilian economy and securities markets, which exhibit volatility and can be adversely affected by developments in other countries; relating to the iron ore business and its dependence on the global steel industry, which is cyclical in nature; and relating to the highly competitive industries in which CVRD operates. For additional information on factors that could cause CVRD's actual results to differ from expectations reflected in forward-looking statements, please see CVRD's reports filed with the Brazilian Comissão de Valores Mobiliários and the U.S. Securities and Exchange Commission.
