Form 10-Q
May 01, 2008

Table of Contents

**UNITED STATES SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549
FORM 10-Q**

Quarterly report pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

Transition report pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the quarterly period ended: March 31, 2008

Commission File Number: 001-15891

NRG Energy, Inc.

(Exact name of Registrant as specified in its charter)

Delaware

(State or other jurisdiction
of incorporation or organization)

41-1724239

(I.R.S. Employer
Identification No.)

**211 Carnegie Center
Princeton, New Jersey**

(Address of principal executive offices)

08540

(Zip Code)

(609) 524-4500

(Registrant's telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer, and smaller reporting company in Rule 12 b-2 of the Exchange Act. (Check one):

**Large
accelerated
filer**

**Accelerated
filer**

Non-accelerated filer

Smaller reporting company

(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

Indicate by check mark whether the registrant has filed all documents and reports required to be filed by Section 12, 13 or 15 (d) of the Securities and Exchange Act of 1934 subsequent to the distribution of securities under a plan confirmed by a court.

Yes No

As of April 25, 2008, there were 235,921,977 shares of common stock outstanding, par value \$0.01 per share.

CAUTIONARY STATEMENT REGARDING FORWARD LOOKING INFORMATION

This Quarterly Report on Form 10-Q includes forward-looking statements within the meaning of Section 27A of the Securities Act and Section 21E of the Exchange Act. The words believes, projects, anticipates, plans, expects, intends, estimates and similar expressions are intended to identify forward-looking statements. These forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause NRG's actual results, performance and achievements, or industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. These factors, risks and uncertainties include the factors described under Risks Related to NRG in Part I, Item 1A, of the Company's Annual Report on Form 10-K, for the year ended December 31, 2007, and the following:

General economic conditions, changes in the wholesale power markets and fluctuations in the cost of fuel;

Hazards customary to the power production industry and power generation operations such as fuel and electricity price volatility, unusual weather conditions, catastrophic weather-related or other damage to facilities, unscheduled generation outages, maintenance or repairs, unanticipated changes to fuel supply costs or availability due to higher demand, shortages, transportation problems or other developments, environmental incidents, or electric transmission or gas pipeline system constraints and the possibility that NRG may not have adequate insurance to cover losses as a result of such hazards;

The effectiveness of NRG's risk management policies and procedures, and the ability of NRG's counterparties to satisfy their financial commitments;

Counterparties' collateral demands and other factors affecting NRG's liquidity position and financial condition;

NRG's ability to operate its businesses efficiently, manage capital expenditures and costs tightly, and generate earnings and cash flows from its asset-based businesses in relation to its debt and other obligations;

NRG's potential inability to enter into contracts to sell power and procure fuel on acceptable terms and prices;

The liquidity and competitiveness of wholesale markets for energy commodities;

Government regulation, including compliance with regulatory requirements and changes in market rules, rates, tariffs and environmental laws and increased regulation of carbon dioxide and other greenhouse gas emissions;

Price mitigation strategies and other market structures employed by independent system operators, or ISOs, or regional transmission organizations, or RTOs, that result in a failure to adequately compensate NRG's generation units for all of its costs;

NRG's ability to borrow additional funds and access capital markets, as well as NRG's substantial indebtedness and the possibility that NRG may incur additional indebtedness going forward;

Operating and financial restrictions placed on NRG and its subsidiaries that are contained in the indentures governing NRG's outstanding notes, in NRG's Senior Credit Facility, and in debt and other agreements of certain of NRG subsidiaries and project affiliates generally;

NRG's ability to implement its *Repowering* NRG strategy of developing and building new power generation facilities, including new nuclear units, Integrated Gasification Combined Cycle, or IGCC, units and wind projects;

NRG's ability to implement its strategy of finding ways to meet the challenges of climate change, clean air and protecting our natural resources while taking advantage of business opportunities; and

NRG's ability to achieve its strategy of regularly returning capital to shareholders.

Forward-looking statements speak only as of the date they were made, and NRG undertakes no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise. The foregoing review of factors that could cause NRG's actual results to differ materially from those contemplated in any forward-looking statements included in this Quarterly Report on Form 10-Q should not be construed as exhaustive.

GLOSSARY OF TERMS

When the following terms and abbreviations appear in the text of this report, they have the meanings indicated below:

Acquisition	February 2, 2006 acquisition of Texas Genco LLC, now referred to as the Company's Texas region
ARO	Asset Retirement Obligation
BACT	Best Available Control Technology
Baseload capacity	Electric power generation capacity normally expected to serve loads on an around-the-clock basis throughout the calendar year
BTU	British Thermal Unit
CAA	Clean Air Act
CAIR	Clean Air Interstate Rule
CAMR	Clean Air Mercury Rule
Capital Allocation Program	Share repurchase program announced in August 2006
CDWR	California Department of Water Resources
CL&P	Connecticut Light & Power
CO ₂	Carbon dioxide
COLA	Combined Operating License Application
CSF I	NRG Common Stock Finance I LLC
CSF II	NRG Common Stock Finance II LLC
DPUC	Connecticut Department of Public Utility Control
EFOR	Equivalent Forced Outage Rates – considers the equivalent impact that forced de-ratings have in addition to full forced outages
EPC	Engineering, Procurement and Construction
ERCOT	Electric Reliability Council of Texas, the Independent System Operator and the regional reliability coordinator of the various electricity systems within Texas
FASB	Financial Accounting Standards Board, the designated organization for establishing standards for financial accounting and reporting
FCM	Forward Capacity Market
FERC	Federal Energy Regulatory Commission
FIN	FASB Interpretation
FIN46R	FASB Interpretation No. 46(R), <i>Consolidation of Variable Interest Entities</i>
FSP	FASB Staff Position
GHG	Greenhouse Gases
Hedge Reset	Net settlement of long-term power contracts and gas swaps by negotiating prices to current market completed in November 2006
IGCC	Integrated Gasification Combined Cycle
ISO	Independent System Operator, also referred to as Regional Transmission Organization, or RTO
ISO-NE	ISO New England, Inc.
ITISA	Itiquira Energetica S.A.
kW	Kilowatts
kWh	Kilowatt-hours
Letter of Credit Facility	NRG's \$1.3 billion senior secured synthetic letter of credit facility which matures on February 1, 2013
LFRM	Locational Forward Reserve Market
LIBOR	London Inter-Bank Offer Rate
LMP	Locational Marginal Prices

LTIP	Long Term Incentive Plan
MACT	Maximum Achievable Control Technology
Merit Order	A term used for the ranking of power stations in terms of increasing order of fuel costs
MMBtu	Million British Thermal Units
MW	Megawatts
MWh	Saleable megawatt hours net of internal/parasitic load megawatt-hours
NAAQS	National Ambient Air Quality Standard
NEPOOL	New England Power Pool
New York Rest of State	New York State excluding New York City
NiMo	Niagara Mohawk Power Corporation
NINA	Nuclear Innovation North America LLC
NO _x	Nitrogen oxide
NOL	Net Operating Loss
NOV	Notice of Violation

Table of Contents**GLOSSARY OF TERMS (cont d)**

NPNS	Normal Purchase Normal Sale
NRC	Nuclear Regulatory Commission
NSR	New Source Review
NYISO	New York Independent System Operator
NYPA	New York Power Authority
OCI	Other Comprehensive Income
Phase II 316(b) Rule	A section of the Clean Water Act regulating cooling water intake structures
PJM	PJM Interconnection LLC
PJM Market	The wholesale and retail electric market operated by PJM primarily in all or parts of Delaware, the District of Columbia, Illinois, Maryland, New Jersey, Ohio, Pennsylvania, Virginia and West Virginia
PMI	NRG Power Marketing LLC, a wholly-owned subsidiary of NRG which procures transportation and fuel for the Company's generation facilities, sells the power from these facilities, and manages all commodity trading and hedging for NRG
PPA	Power Purchase Agreement
PPM	Parts per Million
PSD	Prevention of Significant Deterioration
Repowering	Technologies utilized to replace, rebuild, or redevelop major portions of an existing electrical generating facility, not only to achieve a substantial emissions reduction, but also to increase facility capacity, and improve system efficiency
<i>Repowering</i> NRG	NRG's program designed to develop, finance, construct and operate new, highly efficient, environmentally responsible capacity over the next decade
Revolving Credit Facility	NRG's \$1 billion senior secured credit facility which matures on February 2, 2011
RGGI	Regional Greenhouse Gas Initiative
RMR	Reliability Must-Run
RPM	Reliability Pricing Model term for capacity market in PJM market
RTO	Regional Transmission Organization, also referred to as an Independent System Operator, or ISO
Sarbanes-Oxley	Sarbanes-Oxley Act of 2002
SEC	United States Securities and Exchange Commission
Senior Credit Facility	NRG's senior secured facility, which is comprised of a Term B loan facility which matures on February 1, 2013, a \$1.3 billion Letter of Credit Facility, and a \$1 billion Revolving Credit Facility, which matures on February 2, 2011
SFAS	Statement of Financial Accounting Standards issued by the FASB
SFAS 71	SFAS No. 71, <i>Accounting for the Effects of Certain Types of Regulation</i>
SFAS 109	SFAS No. 109, <i>Accounting for Income Taxes</i>
SFAS 133	SFAS No. 133, <i>Accounting for Derivative Instruments and Hedging Activities</i>
SFAS 141R	SFAS No. 141 (revised 2007), <i>Business Combinations</i>
SFAS 157	SFAS No. 157, <i>Fair Value Measurements</i>
SFAS 160	SFAS No. 160, <i>Noncontrolling Interest in Consolidated Financial Statements</i>
SFAS 161	SFAS No. 161, <i>Disclosure about Derivative Instruments and Hedging Activities - an amendment of FASB Statement No. 133</i>
SO ₂	Sulfur dioxide

SOP	Statement of Position issued by the American Institute of Certified Public Accountants
STP	South Texas Project Nuclear generating facility located near Bay City, Texas in which NRG owns a 44% interest
STPNOC	South Texas Project Nuclear Operating Company
Texas Genco	Texas Genco LLC, now referred to as the Company's Texas region
Tosli	Tosli Acquisition B.V.
US	United States of America
USEPA	United States Environmental Protection Agency
U.S. GAAP	Accounting principles generally accepted in the United States
VAR	Value at Risk
VIE	Variable Interest Entity
WCP	West Coast Power (Generation) Holdings, LLC

Table of Contents

NRG ENERGY, INC.
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

Note 1 Basis of Presentation

NRG Energy, Inc., or NRG or the Company, is a wholesale power generation company with a significant presence in major competitive power markets in the United States. NRG is engaged in the ownership, development, construction and operation of power generation facilities, the transacting in and trading of fuel and transportation services, and the trading of energy, capacity and related products in the United States and select international markets.

The accompanying unaudited interim condensed consolidated financial statements have been prepared in accordance with the Securities and Exchange Commission's regulations for interim financial information and with the instructions to Form 10-Q. Accordingly, they do not include all of the information and notes required by generally accepted accounting principles for complete financial statements. The accounting policies NRG follows are set forth in Note 2 to the Company's financial statements in its Annual Report on Form 10-K for the year ended December 31, 2007. The following notes should be read in conjunction with such policies and other disclosures in the Form 10-K. Interim results are not necessarily indicative of results for a full year.

In the opinion of management, the accompanying unaudited interim consolidated financial statements contain all material adjustments consisting of normal and recurring accruals necessary to present fairly the Company's consolidated financial position as of March 31, 2008, and the results of operations and cash flows for the three months ended March 31, 2008 and 2007, respectively. Certain prior-year amounts have been reclassified for comparative purposes.

Stock Split

In May 2007, NRG completed a two-for-one stock split of the Company's outstanding shares of common stock, which was effected through a stock dividend. All share and per share amounts presented for the three months ended March 31, 2007 retroactively reflect the effect of the stock split.

Use of Estimates

The preparation of consolidated financial statements in accordance with generally accepted accounting principles requires management to make estimates and assumptions. These estimates and assumptions impact the reported amount of assets and liabilities and disclosures of contingent assets and liabilities as of the date of the consolidated financial statements. They also impact the reported amount of net earnings during the reporting period. Actual results could be different from these estimates.

Investment in Affiliate

In February 2008, a wholly owned subsidiary of NRG entered into a 50/50 joint venture with a subsidiary of BP Alternative Energy North America Inc., or BP, to build and own the Sherbino I Wind Farm LLC, or Sherbino. This is a 150 MW wind project consisting of 50 Vestas 3 MW wind turbine generators, located in the West zone of Texas ERCOT power market, or Texas West. A wholly owned subsidiary of NRG is managing the construction, which began in late 2007, and is being conducted by an independent engineering, procurement and construction, or EPC, contractor. The project is scheduled to begin commercial operations during the fourth quarter 2008 at which time an affiliate of BP will manage the operations.

The project will be funded through a combination of equity contributions from the owners and non-recourse project-level debt. NRG delivered a promissory note to Sherbino of \$59 million to support its initial capital contribution, payable no later than December 1, 2008, made an additional contribution of \$17 million on April 18, 2008, and expects to provide another \$11 million by year-end, bringing its total expected equity contribution to \$87 million. NRG has posted a letter of credit in this amount. NRG's maximum exposure to loss is limited to its expected equity investments.

Sherbino has entered into a long-term natural gas swap to mitigate a portion of power price risk for its expected power generation. As the changes in natural gas prices and in Texas West power prices do not meet the required correlation for cash flow hedge accounting, Sherbino will account for the natural gas swap hedge under mark-to-market accounting.

Table of Contents

The Company has determined that Sherbino is a variable interest entity, or VIE, but that the Company is not the primary beneficiary that is required to consolidate Sherbino under FASB Interpretation No. 46(R), *Consolidation of Variable Interest Entities*, or FIN 46R. Consequently, NRG accounts for its investment in Sherbino under the equity method of accounting. NRG's share of mark-to-market results of the natural gas swap will be included in NRG's equity in earnings of Sherbino. NRG's investment at March 31, 2008, net of its promissory note commitment, is a negative \$18 million, which is included in Equity Investments in Affiliates on the condensed consolidated balance sheet.

Recent Accounting Developments

The Company partially adopted SFAS No. 157, *Fair Value Measurements*, or SFAS 157, on January 1, 2008, delaying application for non-financial assets and non-financial liabilities as permitted. This statement defines fair value, establishes a framework for measuring fair value, and expands disclosures about fair value measurements. In February 2008, the Financial Accounting Standards Board, or FASB, issued FASB Staff Position, or FSP, No. FAS 157-1, *Application of FASB Statement No. 157 to FASB Statement No. 13 and Other Accounting Pronouncements That Address Fair Value Measurements for Purposes of Lease Classification or Measurement under Statement 13*, which amends SFAS 157 to exclude FASB Statement No. 13, *Accounting for Leases*, or SFAS 13, and other accounting pronouncements that address fair value measurements for purposes of lease classification or measurement under SFAS 13. In February 2008, the FASB also issued FSP No. FAS 157-2, *Effective Date of FASB Statement No. 157*, which permitted delayed application of this statement for nonfinancial assets and nonfinancial liabilities, except for items that are recognized or disclosed at fair value in the financial statements on a recurring basis (at least annually), until fiscal years beginning after November 15, 2008, and interim periods within those fiscal years. The partial adoption of SFAS 157 did not have a material impact on the Company's consolidated financial position, statement of operations, and cash flows. The Company is currently evaluating the impact of the deferred portion of SFAS 157 on the Company's consolidated financial position, statement of operations, and cash flows.

The Company adopted SFAS No. 159, *The Fair Value Option for Financial Assets and Financial Liabilities-including an amendment of FASB Statement No. 115*, or SFAS 159, on January 1, 2008. This statement provides entities with an option to measure and report selected financial assets and liabilities at fair value. This statement requires a business entity to report unrealized gains and losses on items for which the fair value option has been elected in earnings at each subsequent reporting date. An entity may decide whether to elect the fair value option for each eligible item on its election date, subject to certain requirements described in the statement. The Company does not intend to apply this standard to any of its eligible assets or liabilities; therefore there was no impact on NRG's consolidated financial position, results of operations, or cash flows.

The Company adopted FSP FIN 39-1, *Amendment of FASB Interpretation No. 39*, or FSP FIN 39-1, which amends FIN 39, *Offsetting of Amounts Related to Certain Contracts*, on January 1, 2008. FSP FIN 39-1 impacts entities that enter into master netting arrangements as part of their derivative transactions. Under the guidance in this FSP, entities may choose to offset derivative positions in the financial statements against the fair value of amounts recognized as cash collateral paid or received under those arrangements. The Company chose not to offset positions as defined in this FSP; therefore there was no impact on NRG's consolidated financial position, results of operations, or cash flows.

NRG has non-qualified stock options for which it has insufficient historical exercise data and therefore estimates the expected term using the simplified method, as allowed under Staff Accounting Bulletin (SAB) No. 107, *Share Based Payment*, or SAB 107. In December 2007, the SEC issued SAB No. 110, *Certain Assumptions Used in Valuation Methods*, which eliminates the December 31, 2007 expiration of SAB 107's permission to use this simplified method. NRG will therefore continue to use this simplified method, for as long as the Company deems it to be the most appropriate method.

In December 2007, the FASB issued SFAS No. 141 (revised 2007), *Business Combinations*, or SFAS 141R. This statement applies prospectively to all business combinations for which the acquisition date is on or after the beginning of an entity's first annual reporting period beginning on or after December 15, 2008. The statement establishes principles and requires an acquirer to recognize and measure in its financial statements the identifiable assets acquired, the liabilities assumed, and any noncontrolling interest in the acquiree at fair value at the acquisition date. It also recognizes and measures the goodwill acquired or a gain from a bargain purchase in the business combination and determines what information to disclose to enable users of an entity's financial statements to evaluate the nature and

financial effects of the business combination. As discussed further in Note 11, SFAS 141R will change the application of fresh start accounting to certain of the Company's unrecognized tax benefits. NRG is currently evaluating the impact of this statement upon its adoption on the Company's results of operations, financial position and cash flows.

In December 2007, the FASB issued SFAS No. 160, *Noncontrolling Interests in Consolidated Financial Statements - an amendment of ARB No. 51, Consolidated Financial Statements*, or SFAS 160. This Statement amends ARB No. 51 to establish accounting and reporting standards for the minority interest in a subsidiary and for the deconsolidation of a subsidiary. It also amends

Table of Contents

certain of ARB No. 51's consolidation procedures for consistency with the requirements of SFAS 141R. This Statement shall be effective and applied prospectively for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008, except for the presentation and disclosure requirements, which shall be applied retrospectively. NRG is currently evaluating the impact of this statement upon its adoption on the Company's results of operations, financial position and cash flows.

In March 2008, the FASB issued SFAS No. 161, *Disclosures About Derivative Instruments and Hedging Activities*, or SFAS 161. SFAS 161 requires entities to provide enhanced disclosures about how and why an entity uses derivative instruments, how derivative instruments and related hedged items are accounted for under SFAS 133 and its related interpretations, and how derivative instruments and related hedged items affect an entity's financial position, financial performance, and cash flows. This statement encourages, but does not require, comparative disclosures for earlier periods at initial adoption. SFAS 161 is effective for financial statements issued for fiscal years and interim periods beginning after November 15, 2008, with early application encouraged. The enhanced disclosures regarding derivative and hedging instruments required by SFAS 161 are relevant to NRG, but will not have an impact on the Company's results of operations, financial position, or cash flows.

Note 2 Comprehensive Loss

The following table summarizes the components of the Company's comprehensive loss.

(In millions)		
Three months ended March 31,	2008	2007
Net income	\$ 52	\$ 65
Changes in derivative activity, net of tax	(302)	(283)
Foreign currency translation adjustment, net of tax	42	10
Unrealized gain on available-for-sale securities, net of tax	2	
Other comprehensive loss, net of tax	(258)	(273)
Comprehensive loss	\$ (206)	\$ (208)

The following table summarizes the changes in the Company's accumulated other comprehensive loss.

(In millions)	
As of March 31,	2008
Accumulated other comprehensive loss as of December 31, 2007	\$ (115)
Changes in derivative activity, net of tax	(302)
Foreign currency translation adjustments, net of tax	42
Unrealized gain on available-for-sale securities, net of tax	2
Accumulated other comprehensive loss as of March 31, 2008	\$ (373)

Note 3 Discontinued Operations

The assets and liabilities reported in the balance sheet as discontinued operations represent those of Itiquira Energetica S.A., or ITISA. On December 18, 2007, NRG entered into a sale and purchase agreement to sell its 100% interest in Tosli Acquisition B.V., or Tosli, which holds all NRG's interest in ITISA, to Brookfield Power Inc., a wholly-owned subsidiary of Brookfield Asset Management Inc. On April 28, 2008, NRG completed the sale and received \$288 million in cash proceeds. The sale process will remove approximately \$153 million of assets, including \$53 million of cash, and approximately \$116 million of liabilities, including \$61 million of debt, that are classified as

discontinued assets and liabilities on the condensed consolidated balance sheet as of March 31, 2008. NRG expects to recognize a pre-tax gain of approximately \$250 million and net pre-tax cash additions of approximately \$234 million, subject to a purchase price adjustment to be finalized within 90 days of the sale date.

Summarized operating results for the Company's discontinued operations, consisting of ITISA's activities, were as follows:

(In millions)		2008	2007
Three months ended March 31,			
Operating revenues	\$	15	\$ 11
Pre-tax income		7	5
Income from discontinued operations, net of income taxes		4	4

Table of Contents**Note 4 Fair Value of Financial Instruments**

The Company partially adopted SFAS 157 on January 1, 2008, delaying application for non-financial assets and non-financial liabilities as permitted. This statement establishes a framework for measuring fair value, and expands disclosures about fair value measurements.

SFAS 157 establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value into three levels as follows:

Level 1 quoted prices (unadjusted) in active markets for identical asset or liabilities that the Company has the ability to access as of the measurement date. Financial assets and liabilities utilizing Level 1 inputs include active exchange-traded securities and exchange-based derivatives.

Level 2 inputs other than quoted prices included within Level 1 that are directly observable for the asset or liability or indirectly observable through corroboration with observable market data. Financial assets and liabilities utilizing Level 2 inputs include fixed income securities, non-exchange-based derivatives, mutual funds and fair-value hedges.

Level 3 unobservable inputs for the asset or liability only used when there is little, if any, market activity for the asset or liability at the measurement date. Financial assets and liabilities utilizing Level 3 inputs include infrequently-traded, non-exchange-based derivatives and commingled investment funds, and are measured using present value pricing models.

In accordance with SFAS 157, the Company determines the level in the fair value hierarchy within which each fair value measurement in its entirety falls, based on the lowest level input that is significant to the fair value measurement in its entirety.

The following table presents assets and liabilities measured and recorded at fair value on the Company's Consolidated Balance Sheets on a recurring basis and their level within the fair value hierarchy during the three months ended March 31, 2008:

(In millions)	Fair Value			
	Level 1	Level 2	Level 3	Total
As of March 31, 2008				
Investment in available-for-sale securities (classified within other non-current assets):				
Debt securities	\$	\$	\$ 30	\$ 30
Marketable equity securities	10			10
Trust fund investments	216	131	25	372
Derivative assets	510	2,303	56	2,869
Total assets	\$ 736	\$ 2,434	\$ 111	\$ 3,281
Derivative liabilities	\$ 566	\$ 3,363	\$ 47	\$ 3,976

The following table reconciles, for the period ended March 31, 2008, the beginning and ending balances for financial instruments that are recognized at fair value in the consolidated financial statements at least annually using significant unobservable inputs:

(In millions)	Fair Value Measurement Using Significant Unobservable Inputs (Level 3)
	Trust Fund

Three months ended March 31, 2008	Debt			
	Securities	Investments	Derivatives	Total
Beginning balance as of January 1, 2008	\$ 32	\$ 37	\$ 27	\$ 96
Total gains and losses (realized/unrealized)				
Included in earnings	(2)		(35)	(37)
Included in nuclear decommissioning obligations		(2)		(2)
Included in other comprehensive income			10	10
Purchases/(sales)		(9)	(11)	(20)
Transfer in/(out) of Level 3		(1)	18	17
Ending balance as of March 31, 2008	\$ 30	\$ 25	\$ 9	\$ 64

The amount of the total gains or losses for the period included in earnings attributable to the change in unrealized gains and losses relating to assets still held as of March 31, 2008

\$ (2)	\$	\$ (28)	\$ (30)
--------	----	---------	---------

Table of Contents

Realized and unrealized gains and losses included in earnings that are related to the debt securities are recorded in other income, while those related to derivatives are recorded in operating revenues.

Non-derivative fair value measurements

NRG's debt securities are classified as Level 3 and consist of non-traded debt instruments that are valued based on discounted cash flow methodology which utilizes significant assumptions that are unobservable.

The trust fund investments are held primarily to satisfy NRG's nuclear decommissioning obligations. These trust fund investments hold debt and equity securities directly and equity securities indirectly through commingled funds. The fair values of equity securities held directly by the trust funds are based on quoted prices in active markets and are categorized in Level 1. In addition, U.S. Treasury securities are categorized as Level 1 because they trade in a highly liquid and transparent market. The fair values of fixed income securities, excluding U.S. Treasury securities, are based on evaluated prices that reflect observable market information, such as actual trade information of similar securities, adjusted for observable differences and are categorized in Level 2. Commingled funds, which are analogous to mutual funds, are maintained by investment companies and hold certain investments in accordance with a stated set of fund objectives. The fair value of commingled funds are based on net asset values per fund share (the unit of account), derived from the quoted prices in active markets of the underlying equity securities. However, because the shares in the commingled funds are not publicly quoted, not traded in an active market and are subject to certain restrictions regarding their purchase and sale, the commingled funds are categorized in Level 3.

Derivative fair value measurements

The majority of NRG's energy related contracts are non-exchange-traded contracts valued using prices provided by external sources, primarily price quotations available through brokers or over-the-counter, on-line exchanges. Prices reflect the average of the bid-ask mid-point prices obtained from all sources that NRG believes provide the most liquid market for the commodity. The terms for which such price information is available vary by commodity, region and product. The remainder of the assets represent contracts for which external valuations are not available, primarily option contracts. These contracts are valued using the Black Scholes model, an industry standard option valuation model. The fair values in each category reflect the level of forward prices and volatility factors as of March 31, 2008 and may change as a result of changes in these factors. Management uses its best estimates to determine the fair value of commodity and derivative contracts NRG holds and sells. These estimates consider various factors including closing exchange and over-the-counter price quotations, time value, volatility factors and credit exposure. It is possible, however, that future market prices could vary from those used in recording assets and liabilities from energy marketing and trading activities and such variations could be material.

Credit Risk Associated with Derivative Instruments

NRG would be exposed to credit-related losses in the event of non-performance by counterparties that enter into derivative instruments. The credit exposure of derivative contracts, before collateral, is represented by the fair value of the contracts as of the reporting date. For energy-related derivative instruments, NRG attempts to enter into enabling agreements that allow for payment netting with its counterparties, which reduces NRG's exposure to counterparty credit risk by providing for the offset of amounts payable against amounts receivable to or from the counterparty. Each enabling agreement is commodity specific and so netting is limited to transactions involving that specific commodity except where master netting agreements exist that allow for cross commodity netting. In addition to payment netting language, the credit risk group establishes credit limits and collateral requirements for a counterparty as defined in the enabling agreements. Counterparty credit limits are based on an internal credit assessment that considers a variety of quantitative and qualitative factors, including but not limited to the financial health of the counterparty, credit ratings and risk management capabilities. To the extent that a credit limit is exceeded by the counterparty, NRG will require the counterparty to post collateral as specified in the enabling agreement. NRG's credit risk group monitors current and forward credit exposure to counterparties and their affiliates, both on an individual and portfolio basis.

Under the guidance of FSP FIN 39-1, entities may choose to offset derivative positions in the financial statements against the fair value of the amounts recognized as cash collateral paid or received under those arrangements. The Company has credit arrangements within various agreements to call on or pay additional collateral support. The Company has chosen not to offset positions as defined in this FSP. As of March 31, 2008, the Company has the right

to reclaim \$241 million of cash collateral paid and the obligation to return \$20 million of cash collateral received. These amounts are included in other current assets and liabilities, respectively.

Table of Contents**Note 5 Accounting for Derivative Instruments and Hedging Activities**

SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended, or SFAS 133, requires NRG to recognize all derivative instruments on the balance sheet as either assets or liabilities and to measure them at fair value each reporting period unless they qualify for a Normal Purchase Normal Sale, or NPNS, exception. If certain conditions are met, NRG may be able to designate certain derivatives as cash flow hedges and defer the effective portion of the change in fair value of the derivatives to Other Comprehensive Income, or OCI, until the hedged transactions occur and are recognized in earnings. The ineffective portion of a cash flow hedge is immediately recognized in earnings.

Accumulated Other Comprehensive Income

The following tables summarize the effects of SFAS 133 on NRG's OCI balance attributable to hedged derivatives, net of tax:

(In millions)	Energy Commodities	Interest Rate	Total
Three months ended March 31, 2008			
Accumulated OCI balance at December 31, 2007	\$ (234)	\$ (31)	\$ (265)
Realized from OCI during the period:			
Due to realization of previously deferred amounts	(15)		(15)
Mark-to-market of hedge contracts	(244)	(43)	(287)
Accumulated OCI balance at March 31, 2008	\$ (493)	\$ (74)	\$ (567)
Losses expected to be realized from OCI during the next 12 months, net of \$69 tax	\$ (104)	\$ (2)	\$ (106)

(In millions)	Energy Commodities	Interest Rate	Total
Three months ended March 31, 2007			
Accumulated OCI balance at December 31, 2006	\$ 193	\$ 16	\$ 209
Realized from OCI during the period:			
Due to realization of previously deferred amounts	(17)		(17)
Mark-to-market of hedge contracts	(259)	(7)	(266)
Accumulated OCI balance at March 31, 2007	\$ (83)	\$ 9	\$ (74)

As of March 31, 2008 and 2007, the net balances in OCI relating to SFAS 133 were unrecognized losses of approximately \$567 million and \$74 million, which were net of \$371 million and \$50 million, respectively, in income taxes.

Statement of Operations

In accordance with SFAS 133, unrealized gains and losses associated with changes in the fair value of derivative instruments not accounted for as hedge derivatives and ineffectiveness of hedge derivatives are reflected in current period earnings.

The following tables summarizes the pre-tax effects of non-hedge derivatives, derivatives that do not qualify as hedges, and ineffectiveness of hedge derivatives on NRG's statement of operations:

(In millions)	Three months ended March 31,	
	2008	2007

Revenue from operations – energy commodities	\$ (141)	\$ (90)
Interest expense – interest rate swaps		
Total impact to statement of operations	\$ (141)	\$ (90)

For the three months ended March 31, 2008, the unrealized loss associated with changes in the fair value of derivative instruments not accounted for as hedge derivatives of \$141 million is comprised of \$97 million of fair value decreases in forward sales of electricity and fuel, a \$45 million loss due to the ineffectiveness associated with financial forward contracted electric and gas sales, \$15 million from the reversal of mark-to-market gains which ultimately settled as financial revenues of which \$10 million was related to economic hedges and \$5 million was related to trading activity. In addition, the Company recorded \$16 million of gains associated with open positions also related to trading activity.

For the three months ended March 31, 2007, the unrealized loss associated with changes in the fair value of derivative instruments not accounted for as hedge derivatives of \$90 million is comprised of \$79 million of fair value decreases in forward sales of electricity and fuel, a \$44 million gain due to the ineffectiveness associated with financial forward contracted electric and gas sales, \$70 million from the reversal of mark-to-market gains which ultimately settled as financial revenues of which \$57 million was related to economic

Table of Contents

hedges and \$13 million was related to trading activity. In addition, the Company recorded \$15 million of gains associated with open positions also related to trading activity.

Note 6 Long Term Debt***Debt Related to Capital Allocation Program***

In March 2008, the Company executed an arrangement with Credit Suisse to extend the notes and preferred interest maturities of NRG Common Stock Finance I, LLC, or CSF I, from October 2008 to June 2010. In addition, the settlement date for any share price appreciation beyond a 20% compound annual growth rate since the original date of purchase by CSF I was extended 30 days to early December 2008. As part of this extension arrangement, the Company contributed 795,503 treasury shares to CSF I as additional collateral to maintain a blended interest rate in the CSF I facility of approximately 7.5%. Accordingly, the amount due at maturity in June 2010 for the CSF I notes and preferred interests is \$248 million.

Senior Credit Facility

Beginning in 2008, NRG must annually offer a portion of its excess cash flow (as defined in the Senior Credit Facility) for the prior year to its first lien lenders under the Company's Term B loan. The percentage of the excess cash flow offered to these lenders is dependent upon the Company's consolidated leverage ratio (as defined in the Senior Credit Facility) at the end of the preceding year. Of the amount offered, the first lien lenders must accept 50%, while the remaining 50% may either be accepted or rejected at the lenders' option. The mandatory annual offer required for 2008 was \$446 million, against which the Company made a prepayment of \$300 million in December 2007. Of the remaining \$146 million, the lenders accepted a repayment of \$143 million in March 2008. The amount retained by the Company can be used for investments, capital expenditures and other items as permitted by the Senior Credit Facility.

Note 7 Changes in Capital Structure

The following table reflects the changes in NRG's common stock issued and outstanding during the three months ended March 31, 2008 and 2007:

	Authorized	Issued	Treasury	Outstanding
Balance as of December 31, 2007	500,000,000	261,285,529	(24,550,600)	236,734,929
2008 Capital Allocation Program			(1,281,600)	(1,281,600)
Shares issued from LTIP through March 31, 2008		93,251		93,251
Balance as of March 31, 2008	500,000,000	261,378,780	(25,832,200)	235,546,580
Balance as of December 31, 2006	500,000,000	274,248,264	(29,601,162)	244,647,102
Capital Allocation Program Phase II			(3,000,000)	(3,000,000)
Shares issued from LTIP through March 31, 2007		598,914		598,914
Balance as of March 31, 2007	500,000,000	274,847,178	(32,601,162)	242,246,016

Common Stock

NRG's authorized shares of common stock consist of 500 million shares. Common stock issued as of March 31, 2008 and 2007 was 261,378,780 and 274,847,178 shares, respectively.

Treasury Stock

In December 2007, the Company initiated its 2008 Capital Allocation Program, with the repurchase of 2,037,700 shares of NRG common stock during that month for approximately \$85 million. This was followed in January 2008 with the repurchase of an additional 344,000 shares of NRG common stock for approximately \$15 million. In February 2008, the Company's Board of Directors authorized an additional \$200 million in common share repurchases

that would raise the total 2008 Capital Allocation Program to approximately \$300 million. In March 2008, the Company repurchased an additional 937,600 shares of NRG common stock in the open market for approximately \$40 million. As of March 31, 2008, NRG had repurchased a total of 3,319,300 shares of NRG common stock at a cost of approximately \$140 million as part of its 2008 Capital Allocation Program.

Table of Contents**Note 8 Equity Compensation*****Non-Qualified Stock Options, or NQSO s***

The following table summarizes the Company s NQSO activity as of March 31, 2008 and the changes during the three months then ended:

	Shares	Weighted Average Exercise Price	Aggregate Intrinsic Value (In millions)
Outstanding as of December 31, 2007	3,579,775	\$ 19.98	
Granted	929,500	42.63	
Forfeited	(20,667)	34.11	
Exercised	(73,204)	23.42	
Outstanding at March 31, 2008	4,415,404	24.62	\$ 63
Exercisable at March 31, 2008	2,413,256	\$ 16.87	53

The weighted average grant date fair value of NQSO s granted for the three months ending March 31, 2008 was \$11.08.

Restricted Stock Units, or RSU s

The following table summarizes the Company s non-vested RSU awards as of March 31, 2008 and changes during the three months then ended:

Non-vested Shares	Shares	Weighted Average Grant- Date Fair Value Per Unit
Non-vested as of December 31, 2007	1,588,316	\$ 26.99
Granted	136,000	41.66
Vested	(16,400)	18.26
Forfeited	(16,790)	31.09
Non-vested as of March 31, 2008	1,691,126	\$ 28.21

Performance Units, or PU s

The following table summarizes the Company s non-vested PU awards as of March 31, 2008 and changes during the three months then ended:

Non-vested Shares	Shares	Weighted Average Grant- Date Fair Value Per Unit
Non-vested as of December 31, 2007	536,764	\$ 20.18
Granted	179,900	28.90

Forfeited	(8,000)		21.25
Non-vested as of March 31, 2008	708,664	\$	22.38

Table of Contents**Note 9 Earnings Per Share**

Basic earnings per common share is computed by dividing net income less accumulated preferred stock dividends by the weighted average number of common shares outstanding. Shares issued and treasury shares repurchased during the year are weighted for the portion of the year that they were outstanding. Diluted earnings per share is computed in a manner consistent with that of basic earnings per share while giving effect to all potentially dilutive common shares that were outstanding during the period.

The reconciliation of basic earnings per common share to diluted earnings per share is as follows:

(In millions, except per share data)	Three months ended March 31,	
	2008	2007
Basic earnings per share		
Numerator:		
Income from continuing operations	\$ 48	\$ 61
Preferred stock dividends	(14)	(14)
Net income available to common stockholders from continuing operations	34	47
Discontinued operations, net of income tax expense	4	4
Net income available to common stockholders	\$ 38	\$ 51
Denominator:		
Weighted average number of common shares outstanding	236.3	244.0
Basic earnings per share:		
Income from continuing operations	\$ 0.14	\$ 0.19
Discontinued operations, net of income tax expense	0.02	0.02
Net income	\$ 0.16	\$ 0.21
Diluted earnings per share		
Numerator:		
Net income available to common stockholders from continuing operations	\$ 34	\$ 47
Add preferred stock dividends for dilutive preferred stock		4
Adjusted income from continuing operations	34	51
Discontinued operations, net of tax	4	4
Net income available to common stockholders	\$ 38	\$ 55
Denominator:		
Weighted average number of common shares outstanding	236.3	244.0
Incremental shares attributable to the issuance of equity compensation (treasury stock method)	3.7	3.2
Incremental shares attributable to embedded derivatives of certain financial instruments (if-converted method)	5.3	2.3
Incremental shares attributable to assumed conversion features of outstanding preferred stock (if-converted method)		21.0
Total dilutive shares	245.3	270.5

Diluted earnings per share:

Income from continuing operations	\$	0.14	\$	0.19
Income from discontinued operations, net of tax		0.02		0.01
Net income	\$	0.16	\$	0.20

Effects on Earnings per Share

The following table summarizes NRG's outstanding equity instruments that are anti-dilutive and were not included in the computation of the Company's diluted earnings per share:

(In millions of shares)	Three months ended March	
	2008	2007
Equity compensation (NQSO's and PU's)	1.3	1.0
4.0% convertible preferred stock	21.0	
5.75% convertible preferred stock	16.5	16.5
Embedded derivative of 3.625% redeemable perpetual preferred stock	12.2	14.5
Embedded derivative of preferred interests and notes issued by CSF I and CSF II	16.8	17.6
Total	67.8	49.6

Table of Contents**Note 10 Segment Reporting**

The Company's segment structure reflects NRG's core areas of operation which are primarily the geographic regions of the Company's wholesale power generation, thermal and chilled water business, and corporate activities. Within NRG's wholesale power generation operations, there are distinct components with separate operating results and management structures for the following regions: Texas, Northeast, South Central, West and International.

(In millions)	Wholesale Power Generation								Total
	South								
Three months ended March 31, 2008	Texas	Northeast	Central	West	International	Thermal	Corporate	Elimination	
Operating revenues	\$ 649	\$ 360	\$ 179	\$ 38	\$ 38	\$ 44	\$ (5)	\$ (1)	\$ 1,302
Depreciation and amortization	113	26	17	1		3	1		161
Equity in (losses)/earnings of unconsolidated affiliates	(18)			(2)	16				(4)
Income/(loss) from continuing operations before income taxes	67	59	39	12	24	5	(104)		102
Income from discontinued operations, net of income taxes					4				4
Net income/(loss)	\$ 37	\$ 59	\$ 39	\$ 12	\$ 24	\$ 5	\$ (124)	\$	\$ 52
Total assets	\$ 12,072	\$ 1,550	\$ 972	\$ 255	\$ 1,276	\$ 214	\$ 14,447	\$ (9,812)	\$ 20,974

(In millions)	Wholesale Power Generation								Total
	South								
Three months ended March 31, 2007	Texas	Northeast	Central	West	International	Thermal	Corporate	Elimination	
Operating revenues	\$ 695	\$ 342	\$ 150	\$ 28	\$ 32	\$ 49	\$ 5	\$ (2)	\$ 1,299
Depreciation and amortization	114	25	17			3	1		160
Equity in (losses)/earnings of unconsolidated affiliates				(2)	15				13
Income/(loss) from continuing operations before income taxes	113	38	10	5	19	23	(92)		116
Income from discontinued operations, net of income taxes					4				4
Net income/(loss)	\$ 60	\$ 38	\$ 10	\$ 5	\$ 17	\$ 23	\$ (88)	\$	\$ 65

Table of Contents**Note 11 Income Taxes**

Income tax expense from continuing operations for the three months ended March 31, 2008 and March 31, 2007 was \$54 million and \$55 million, respectively. The income tax expense for the three months ended March 31, 2008 included domestic tax expense of \$50 million and foreign tax expense of \$4 million. The income tax expense for the three months ended March 31, 2007 included domestic tax expense of \$48 million and foreign tax expense of \$7 million.

A reconciliation of the U.S. statutory rate to NRG's effective tax rate from continuing operations is as follows:

(In millions except rate data)

Three months ended March 31,	2008	2007
Income from continuing operations before income taxes	\$ 102	\$ 116
Tax at 35%	36	41
State taxes	6	6
Valuation allowance	8	
Foreign operations	(3)	(1)
Foreign dividend	6	5
Non-deductible interest	3	3
Other permanent differences including subpart F income	(2)	1
Income tax expense	\$ 54	\$ 55
Effective income tax rate	52.9%	47.4%

The effective income tax rate for the three months ended March 31, 2008 and 2007 differs from the U.S. statutory rate of 35% due to an establishment of valuation allowance, a taxable dividend from foreign operations and non-deductible interest, offset by earnings in foreign jurisdictions that are taxed at rates lower than the U.S. statutory rate.

Deferred tax assets and valuation allowance

Net deferred tax balance As of March 31, 2008, NRG recorded a net deferred tax asset of \$3 million. However, due to an assessment of positive and negative evidence, including projected capital gains and available tax planning strategies, NRG believes that it is more likely than not that a benefit will not be realized on \$562 million of tax assets, thus a valuation allowance has remained, resulting in a net deferred tax liability of \$559 million.

NOL carryforwards As of March 31, 2008, the Company has cumulative foreign NOL carryforwards of \$305 million of which \$75 million will expire starting in 2011 through 2017 and of which \$230 million do not have an expiration date.

Valuation Allowance As of March 31, 2008, the Company's valuation allowance was increased by approximately \$9 million of federal and \$1 million of state tax as a result of net capital losses generated during the period. The Company reduced its foreign valuation allowance by \$1 million due to the utilization of foreign NOL.

Uncertain tax benefits

NRG has identified certain unrecognized tax benefits whose after-tax value was \$698 million, of which \$25 million would impact the Company's effective tax rate if recognized. Of the \$698 million in unrecognized tax benefits, \$673 million relates to periods prior to the Company's emergence from bankruptcy. In accordance with Statement of Position 90-7, *Financial Reporting by Entities in Reorganization under the Bankruptcy Code*, and the application of fresh start accounting, recognition of previously unrecognized tax benefits existing pre-emergence would not impact the Company's effective tax rate but would increase additional paid-in capital, or APIC. As of March 31, 2008, NRG has recorded a \$50 million non-current tax liability for unrecognized tax benefits. In accordance with SFAS 141R, any changes to our uncertain tax benefits occurring after January 1, 2009 will be credited to income tax expense rather than APIC.

NRG has accrued interest and penalties related to these unrecognized tax benefits of approximately \$3 million as of March 31, 2008. The Company recognizes interest and penalties related to unrecognized tax benefits in income tax expense. For the quarter ended March 31, 2008, the Company incurred an immaterial amount of interest and penalties related to its unrecognized tax benefits.

Tax jurisdictions NRG is subject to examination by taxing authorities for income tax returns filed in the U.S. federal jurisdiction and various state and foreign jurisdictions including major operations located in Germany, Australia, and Brazil. The Company is no longer subject to U.S. federal income tax examinations for years prior to 2002. With few exceptions, state and local income tax examinations are no longer open for years before 2003. The Company's significant foreign operations are also no longer subject to examination by local jurisdictions for years prior to 2000.

The Company has been contacted for examination by the Internal Revenue Service for years 2004 through 2006. The audit is expected to commence in June 2008 and continue for approximately 18 to 24 months.

Table of Contents**Note 12 Benefit Plans and Other Postretirement Benefits*****NRG Defined Benefit Plans***

NRG sponsors and operates three defined benefit pension and other postretirement plans. The NRG Plan for Bargained Employees and the NRG Plan for Non-Bargained Employees are maintained solely for eligible legacy NRG participants. A third plan, the Texas Genco Retirement Plan, is maintained for participation solely by eligible Texas-based employees. The total amount of employer contributions paid for the three months ended March 31, 2008 was \$13 million.

The net periodic pension cost related to all of the Company's defined benefit pension plans include the following components:

(In millions) Three months ended March 31	Defined Benefit Pension Plans	
	2008	2007
Service cost benefits earned	\$ 4	\$ 4
Interest cost on benefit obligation	5	4
Expected return on plan assets	(4)	(3)
Net periodic benefit cost	\$ 5	\$ 5

The net periodic cost related to all of the Company's other post retirement benefits plans include the following components:

(In millions) Three months ended March 31	Other Postretirement Benefits Plans	
	2008	2007
Service cost benefits earned	\$ 1	\$ 1
Interest cost on benefit obligation	1	1
Net periodic benefit cost	\$ 2	\$ 2

STP Defined Benefit Plans

NRG has a 44% undivided ownership interest in South Texas Project, or STP. STPNOC, which operates and maintains STP, provides its employees a defined benefit pension plan as well as postretirement health and welfare benefits. Although NRG does not sponsor the STP plan, it reimburses STPNOC for 44% of the contributions made towards its retirement plan obligations. The Company has also recognized net periodic costs related to its 44% interest in STP defined benefits plans of \$2 million for both the three months ended March 31, 2008 and 2007.

Table of Contents**Note 13 Commitments and Contingencies****Commitments*****Fuel Commitments***

NRG enters into long-term contractual arrangements to procure fuel and transportation services for the Company's generation assets. NRG entered into additional coal purchase agreements during the three months ended March 31, 2008 with total commitments of approximately \$213 million, spanning over 2008 and 2009. In addition, NRG natural gas purchase commitments increased by \$122 million over the next three years due to higher forward prices.

First and Second Lien Structure

NRG has granted first and second priority liens to certain counterparties on substantially all of the Company's assets in the United States in order to secure certain obligations, which are primarily long-term in nature under certain power sale agreements and related contracts. NRG uses the first or second lien structure to reduce the amount of cash collateral and letters of credit that it would otherwise be required to post from time to time to support its obligations under these agreements. Within the first and second lien structure, the Company can hedge up to 80% of its baseload capacity and 10% of its non-baseload assets with these counterparties.

As part of the amendments to NRG's Senior Credit Facility entered into on June 8, 2007, the Company obtained the ability to move its current second lien counterparty exposure to the first lien, on a pari passu basis, with the Company's existing first lien lenders. In exchange for moving some second lien holders to a pari passu basis with the Company's first lien lenders, the counterparties relinquished letters of credit issued by NRG which they held as a part of their collateral package.

On March 31, 2008, the Company moved a second lien counterparty to a first lien position, resulting in the release of approximately \$57 million of letters of credit. As of March 31, 2008, and April 25, 2008, the net discounted exposure less collateral posted on the agreements and hedges that were subject to the first lien structure were approximately \$1.1 billion and \$1.6 billion, respectively. As of March 31, 2008, and April 25, 2008, the net discounted exposure less collateral posted on the agreements and hedges that were subject to the second lien structure were approximately \$382 million and \$579 million, respectively.

Repowering NRG

NRG has made non-refundable deposits relating to *Repowering NRG* projects totaling approximately \$118 million primarily towards the procurement of wind turbines. The Company believes that these deposits are necessary for the timely and successful execution of these projects. The deposits are in support of expected deliveries of wind turbines and other equipment totaling approximately \$417 million through 2009. In addition, as discussed in Note 1, NRG expects to contribute approximately \$87 million in equity to Sherbino in 2008 and has posted a letter of credit in that amount.

Table of Contents**Contingencies**

Set forth below is a description of the Company's material legal proceedings. The Company believes that it has valid defenses to these legal proceedings and intends to defend them vigorously. Pursuant to the requirements of SFAS No. 5, *Accounting for Contingencies*, or SFAS 5, and related guidance, NRG records reserves for estimated losses from contingencies when information available indicates that a loss is probable and the amount of the loss, or range of loss, can be reasonably estimated. Management has assessed each of the following matters based on current information and made a judgment concerning its potential outcome, considering the nature of the claim, the amount and nature of damages sought, and the probability of success. Unless specified below, the Company is unable to predict the outcome of these legal proceedings or reasonably estimate the scope or amount of any associated costs and potential liabilities. As additional information becomes available, management adjusts its assessment and estimates of such contingencies accordingly. Because litigation is subject to inherent uncertainties and unfavorable rulings or developments, it is possible that the ultimate resolution of the Company's liabilities and contingencies could be at amounts that are different from its currently recorded reserves and that such difference could be material.

In addition to the legal proceedings noted below, NRG and its subsidiaries are party to other litigation or legal proceedings arising in the ordinary course of business. In management's opinion, the disposition of these ordinary course matters will not materially adversely effect NRG's consolidated financial position, results of operations, or cash flows.

California Department of Water Resources

On December 19, 2006, the U.S. Court of Appeals for the Ninth Circuit reversed the Federal Energy Regulatory Commission's, or FERC's, prior determinations regarding the enforceability of certain wholesale power contracts and remanded the case to FERC for further proceedings consistent with the decision. One of these contracts was the wholesale power contract between the California Department of Water Resources, or CDWR, and subsidiaries of WCP. This case originated with a February 2002 complaint filed at FERC by the State of California alleging that many parties, including WCP subsidiaries, overcharged the State. For WCP, the alleged overcharges totaled approximately \$940 million for 2001 and 2002. The complaint demanded that FERC abrogate the CDWR contract and sought refunds associated with revenues collected under the contract. In 2003, FERC rejected this complaint, denied rehearing, and the case was appealed to the Ninth Circuit where oral argument was held on December 8, 2004. On December 19, 2006, the Court decided that in FERC's review of the contracts at issue, FERC could not rely on the Mobile-Sierra standard presumption of just and reasonable rates, where such contracts were not reviewed by FERC with full knowledge of the then existing market conditions. On May 3, 2007, WCP and the other defendants filed separate petitions for certiorari seeking review by the U.S. Supreme Court and on September 25, 2007, the Court agreed to hear two of the filed petitions. Although WCP's petition was not selected for review, the Court's ultimate decision with respect to the other defendants' petitions will apply equally to WCP. Oral argument occurred on February 19, 2008, and a decision is expected from the Court by the end of the third quarter 2008. At this time, while NRG cannot predict with certainty whether WCP will be required to make refunds for rates collected under the CDWR contract or estimate the range of any such possible refunds, a reconsideration of the CDWR contract by FERC with a resulting order mandating significant refunds could have a material adverse impact on NRG's financial position, statement of operations, and statement of cash flows. As part of the 2006 acquisition of Dynegy's 50% ownership interest in WCP, WCP and NRG assumed responsibility for any risk of loss arising from this case, unless any such loss was deemed to have resulted from certain acts of gross negligence or willful misconduct on the part of Dynegy, in which case any such loss would be shared equally between WCP and Dynegy.

Station Service Disputes

On October 2, 2000, Niagara Mohawk Power Corporation, or NiMo, commenced an action against NRG in New York state court seeking damages related to NRG's alleged failure to pay retail tariff amounts for utility services at the Dunkirk plant between June 1999 and September 2000. The parties agreed to consolidate this action with two other actions against the Huntley and Oswego plants. On October 8, 2002, by stipulation and order, this action was stayed pending submission to FERC of the disputes in the action. At FERC, NiMo asserted the same claims and legal theories, and on November 19, 2004, FERC denied NiMo's petition and ruled that the NRG facilities could net their service obligations over each 30 calendar day period from the day NRG acquired the facilities. In addition, FERC

ruled that neither NiMo nor the New York Public Service Commission could impose a retail delivery charge on the NRG facilities because they are interconnected to transmission and not to distribution. NiMo appealed to the U.S. Court of Appeals for the D.C. Circuit which, on June 23, 2006, denied the appeal finding that New York Independent System Operator's, or NYISO's, station service program that permits generators to self supply their station power needs by netting consumption against production in a month is lawful. On April 30, 2007, the U.S. Supreme Court denied NiMo's request for review of the D.C. Circuit decision thus ending further avenues to appeal FERC's ruling in this matter. NRG believes it is adequately reserved.

Table of Contents

On December 14, 1999, NRG acquired certain generating facilities from CL&P. A dispute arose over station service power and delivery services provided to the facilities. On December 20, 2002, as a result of a petition filed at FERC by Northeast Utilities Services Company on behalf of itself and CL&P, FERC issued an order finding that, at times when NRG is not able to self-supply its station power needs, there is a sale of station power from a third-party and retail charges apply. In August 2003, the parties agreed to submit the dispute to binding arbitration. On September 11, 2007, the parties argued the dispute before a three judge arbitration panel. On February 19, 2008, the parties executed a settlement agreement ending the arbitration. A component of the settlement that requires action from ISO-NE is pending.

Native Village of Kivalina and City of Kivalina

Twenty-four electric generating companies and oil and gas companies have been named as defendants in this complaint, which has been filed but not yet served on NRG. Damages of up to \$400 million have been asserted. The complaint alleges that the carbon dioxide emissions of defendants contribute to global climate changes which has harmed the plaintiffs. The complaint was filed on behalf of a small Alaskan town and seeks damages associated with those tribes having to relocate from the northern coast of Alaska, purportedly because of the effects of global warming. By agreement with the plaintiffs, the response date for all defendants to the complaint is June 30, 2008.

Spring Creek Coal Company

In August 2007, Spring Creek Coal Company filed a complaint against NRG Texas LP, NRG South Texas LP, NRG Texas Power LLC, NRG Texas LLC, and NRG Energy, Inc. in the U.S. District Court for the federal district of Wyoming. The complaint alleged multiple breaches in 2007 of a 1978 coal supply agreement as amended by a later 1987 agreement, which plaintiff alleges is a take or pay contract. Several dispositive motions were set to be heard by the court on July 11, 2008, with a trial scheduled to begin on September 8, 2008. On April 10, 2008, the parties reached a settlement in principal ending the litigation. A settlement agreement is expected to be executed in the second quarter of 2008. The settlement provides that while neither party admits liability, NRG will pay Spring Creek approximately \$18 million for the amount of coal it did not take in 2007 and NRG's obligation to take coal under the contract in the future will be reduced by an identical amount. In addition, NRG will receive a price reduction on all remaining tons of the coal supply agreement, valued at approximately \$3 million. NRG recorded a \$15 million reserve as of March 31, 2008.

Disputed Claims Reserve

As part of NRG's plan of reorganization, NRG funded a disputed claims reserve for the satisfaction of certain general unsecured claims that were disputed claims as of the effective date of the plan. Under the terms of the plan, as such claims are resolved, the claimants are paid from the reserve on the same basis as if they had been paid out in the bankruptcy. To the extent the aggregate amount required to be paid on the disputed claims exceeds the amount remaining in the funded claims reserve, NRG will be obligated to provide additional cash and common stock to satisfy the claims. Any excess funds in the disputed claims reserve will be reallocated to the creditor pool for the pro rata benefit of all allowed claims. The contributed common stock and cash in the reserves is held by an escrow agent to complete the distribution and settlement process. Since NRG has surrendered control over the common stock and cash provided to the disputed claims reserve, NRG recognized the issuance of the common stock as of December 6, 2003 and removed the cash amounts from the balance sheet. Similarly, NRG removed the obligations relevant to the claims from the balance sheet when the common stock was issued and cash contributed.

On April 3, 2006, the Company made a supplemental distribution to creditors under the Company's Chapter 11 bankruptcy plan, totaling \$25 million in cash and 5,082,000 shares of common stock. As of April 25, 2008, the reserve held approximately \$10 million in cash and approximately 1,319,142 shares of common stock on a post-stock split basis. NRG believes the cash and stock together represent sufficient funds to satisfy all remaining disputed claims.

Table of Contents**Note 14 Regulatory Matters**

NRG operates in a highly regulated industry and is subject to regulation by various federal and state agencies. As such, NRG is affected by regulatory developments at both the federal and state levels and in the regions in which NRG operates. In addition, NRG is subject to the market rules, procedures, and protocols of the various ISO markets in which NRG participates. These wholesale power markets are subject to ongoing legislative and regulatory changes.

New England On July 16, 2007, FERC conditionally accepted, subject to refund, the Reliability-Must-Run, or RMR, agreement filed on April 26, 2007 by Norwalk Power for its units 1 and 2, specifying a June 19, 2007 effective date. Norwalk's RMR rate and its eligibility for the RMR agreement, which is based upon the facility's projected market revenues and costs, are subject to further proceedings. Norwalk filed for the RMR agreement in response to FERC's order eliminating the Peaking Unit Safe Harbor bidding mechanism which took effect on June 19, 2007. Settlement proceedings are still ongoing.

On March 18, 2008, the U.S. Court of Appeals for the D.C. Circuit rejected the appeal filed by the Attorneys General of the State of Connecticut and Commonwealth of Massachusetts regarding the settlement of the New England capacity market design. The settlement, filed with FERC on March 7, 2006, by a broad group of New England market participants, provides for interim capacity transition payments for all generators in New England for the period starting December 1, 2006 through May 31, 2010, and a Forward Capacity Market that is in the process of being implemented for the period thereafter. All substantive challenges to the settlement, to the validity of the interim capacity transition payments, and to the market design were rejected by the court, although one procedural argument relating to future challenges by non-settling parties was sustained.

New York On March 7, 2008, FERC issued an order accepting the NYISO's proposed market reforms to the in-city Installed Capacity, or ICAP, market, with only minor modifications. On October 4, 2007, the NYISO had filed its proposal for revising the ICAP market for the New York City zone. The proposal retains the existing ICAP market structure, but imposes additional market power mitigation on the current owners of Consolidated Edison's divested generation units in New York City (which include NRG's Arthur Kill and Astoria facilities), who are deemed to be pivotal suppliers. Specifically, the NYISO proposal imposes a new reference price on pivotal suppliers and requires bids to be submitted at or below the reference price. The new reference price is derived from the expected clearing price based upon the intersection of the supply curve and the ICAP Demand Curve if all suppliers bid as price-takers. The NYISO's proposed reforms became effective March 27, 2008. Although FERC had established a refund effective date of May 12, 2007, its March 7 order determined that the NYISO's proposal should be implemented only prospectively and that no refunds should be required. No party has sought rehearing on the refund issue, thus resolving the contingency. NRG, as well as other market participants, have sought rehearing of other aspects of the March 7 order.

On March 15, 2006, NRG received the results from NYISO Market Monitoring Unit's review of NRG's Astoria plant's 2004 Generating Availability Data System reporting. This audit may result in the resettlement of NRG's capacity revenues from the Astoria facility due to a redetermination of the amount of available capacity. NRG is currently in settlement discussions with the NYISO, and the Company believes that it is adequately reserved.

PJM On August 23, 2007, several entities, including the New Jersey Board of Public Utilities, the District of Columbia Office of the People's Counsel, and the Maryland Office of People's Counsel, filed appeals of the FERC orders accepting the settlement of the locational capacity market for PJM Interconnection, LLC. The settlement, filed at FERC on September 29, 2006, provides for a capacity market mechanism known as the Reliability Pricing Model, or RPM, which is designed to provide a long-term price signal through competitive forward auctions. On December 22, 2006, FERC issued an order accepting the settlement, which was reaffirmed on rehearing by order dated June 25, 2007. The RPM auctions have been conducted and capacity payments pursuant to the RPM mechanism have commenced. A successful appeal by the appellants could disturb the settlement and create a refund obligation of capacity payments.

On January 15, 2008, the Maryland Public Service Commission, or MDPSC, filed at FERC a complaint against PJM claiming that PJM had failed to adequately mitigate certain generation resources, due to exemptions for resources used to relieve reactive limits on interfaces or that were constructed during certain periods after 1999. In addition to seeking an order eliminating the exemptions and a refund effective date as of the date of the complaint, the MDPSC is

also seeking an investigation of periods prior to the complaint that could lead to disgorgement by certain entities, and possibly a resettlement of the market back to September 8, 2006. The principal impacts on NRG would occur as a resettlement of the LMPs, which is not viewed as likely at this time, and going-forward in the form of lower LMPs. In addition, NRG's peaking units at its energy center in Dover, Delaware were built in 2001 and utilize the post-1999 bidding exemption.

Table of Contents**Note 15 Environmental Matters**

The construction and operation of power projects are subject to stringent environmental and safety protection and land use laws and regulation in the U.S. If such laws and regulations become more stringent, or new laws, interpretations or compliance policies apply and NRG's facilities are not exempt from coverage, the Company could be required to make modifications to further reduce potential environmental impacts. New greenhouse gas legislation and regulations to mitigate the effects of gases, including CO₂ from power plants, are under consideration at the federal and state levels. In general, the effect of such future laws or regulations is expected to require the addition of pollution control equipment or the imposition of restrictions or additional costs on the Company's operations.

Environmental Capital Expenditures

Based on current rules, technology and plans, NRG has estimated that environmental capital expenditures to be incurred from 2008 through 2012 to meet NRG's environmental commitments will be between \$1.0 billion and \$1.4 billion. These capital expenditures, in general, are related to installation of particulate, SO₂, NO_x, and mercury controls to comply with Clean Air Interstate Rule, or CAIR, consent orders and state requirements as well as installation of Best Technology Available under the Phase II 316(b) rule. NRG continues to explore cost effective alternatives that can achieve desired results. The range reflects alternative strategies available with respect to the Company's Indian River plant.

The legal challenges to both the CAIR and CAMR regulations may alter the composition and rate of spending for environmental retrofits at our facilities until the regulations becomes more certain. This may be most felt in states such as Texas and Louisiana which adopted the federal CAMR rather than a state implementation plan. The full impact of these legal challenges on the scope and timing of environmental retrofits cannot be determined at this time.

South Central Region

On January 27, 2004, NRG's Louisiana Generating LLC and the Company's Big Cajun II plant received a request under Section 114 of the Clean Air Act, or CAA, from USEPA seeking information primarily related to physical changes made at the Big Cajun II plant, and subsequently received a notice of violation, or NOV, on February 15, 2005, alleging that NRG's predecessors had undertaken projects that triggered requirements under the Prevention of Significant Deterioration, or PSD, program, including the installation of emission controls. NRG submitted multiple responses commencing February 27, 2004 and ending on October 20, 2004. On May 9, 2006, these entities received from the Department of Justice, or DOJ, a notice of deficiency related to their responses, to which NRG responded on May 22, 2006. A document review was conducted at NRG's Louisiana Generating LLC offices by the DOJ during the week of August 14, 2006. On December 8, 2006, the USEPA issued a supplemental NOV updating the original February 15, 2005 NOV. Discussions with the USEPA are ongoing and the Company cannot predict with certainty the outcome of this matter.

Note 16 Guarantees

NRG and its subsidiaries enter into various contracts that include indemnification and guarantee provisions as a routine part of the Company's business activities. Examples of these contracts include asset purchases and sale agreements, commodity sale and purchase agreements, joint venture agreements, operation and maintenance agreements, service agreements, settlement agreements, and other types of contractual agreements with vendors and other third parties. These contracts generally indemnify the counterparty for tax, environmental liability, litigation and other matters, as well as breaches of representations, warranties and covenants set forth in these agreements. In some cases, NRG's maximum potential liability cannot be estimated, since the underlying agreements contain no limits on potential liability.

This footnote should be read in conjunction with the complete description under Note 25, *Guarantees*, to the Company's financial statements in its Annual Report on Form 10-K for the year ended December 31, 2007.

For the three months ended March 31, 2008, NRG had net increases to its guarantee obligations under other commercial arrangements of approximately \$178 million. These pertain to payment obligations of NRG Power Marketing LLC, or PMI.

Table of Contents

Note 17 Condensed Consolidating Financial Information

As of March 31, 2008, the Company had \$1.2 billion of 7.25% Senior Notes due 2014, \$2.4 billion of 7.375% Senior Notes due 2016 and \$1.1 billion of 7.375% Senior Notes due 2017 outstanding. These notes are guaranteed by certain of NRG's current and future wholly-owned domestic subsidiaries, or guarantor subsidiaries.

Each of the following guarantor subsidiaries fully and unconditionally guaranteed the Senior Notes as of March 31, 2008:

The non-guarantor subsidiaries include all of NRG's foreign subsidiaries and certain domestic subsidiaries. NRG conducts much of its business through and derives much of its income from its subsidiaries. Therefore, the Company's ability to make required payments with respect to its indebtedness and other obligations depends on the financial results and condition of its subsidiaries and NRG's ability to receive funds from its subsidiaries. Except for NRG Bayou Cove LLC, which is subject to certain restrictions under

Table of Contents

the Company's Peaker financing agreements, there are no restrictions on the ability of any of the guarantor subsidiaries to transfer funds to NRG. In addition, there may be restrictions for certain non-guarantor subsidiaries.

The following condensed consolidating financial information presents the financial information of NRG Energy, Inc., the guarantor subsidiaries and the non-guarantor subsidiaries in accordance with Rule 3-10 under the Securities and Exchange Commission's Regulation S-X. The financial information may not necessarily be indicative of results of operations or financial position had the guarantor subsidiaries or non-guarantor subsidiaries operated as independent entities.

In this presentation, NRG Energy, Inc. consists of parent company operations. Guarantor subsidiaries and non-guarantor subsidiaries of NRG are reported on an equity basis. For companies acquired, the fair values of the assets and liabilities acquired have been presented on a push-down accounting basis.

Table of Contents**Note 18 Subsequent Event**

On March 25, 2008, NRG announced the formation of Nuclear Innovation North America LLC, or NINA, an NRG subsidiary focused on marketing, siting, developing, financing and investing in new advanced design nuclear projects in select markets across North America, including the planned STP units 3 and 4 that NRG is developing on a 50/50 basis with City of San Antonio's agent CPS Energy at the STP nuclear power station site. In April 2008, NRG contributed its rights to develop STP units 3 and 4 to special purpose subsidiaries of NINA. In addition, Toshiba Corporation, or Toshiba, agreed to partner with NRG on the NINA venture and to invest \$300 million in NINA in six annual installments of \$50 million, the last three of which are subject to certain conditions, in exchange for a 12% equity ownership in NINA.

On April 21, 2008, NINA entered into a \$20 million revolving loan arrangement, as borrower, to provide working capital. This facility matures on April 21, 2011, and permits NINA to make cash draws or issue letters of credit. Borrowings accrue interest at either LIBOR or a base rate, plus a spread. As of April 21, 2008, NINA had borrowed \$10 million.

ITEM 2 MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS**Introduction and Overview**

NRG Energy, Inc., or NRG or the Company, is a wholesale power generation company with a significant presence in major competitive power markets in the United States. NRG is primarily engaged in the ownership, development, construction and operation of power generation facilities, the transacting in and trading of fuel and transportation services, and the trading of energy, capacity and related products in the United States and select international markets. As of March 31, 2008, NRG had a total global portfolio of 191 active operating generation units at 49 power generation plants, with an aggregate generation capacity of approximately 24,120 MW and approximately 1,412 MW under construction, which includes partnership interests. Within the United States, NRG has one of the largest and most diversified power generation portfolios in terms of geography, fuel-type and dispatch levels, with approximately 22,885 MW of generation capacity in 175 active generating units at 43 plants. These power generation facilities are primarily located in Texas (approximately 10,805 MW), the Northeast (approximately 6,980 MW), South Central (approximately 2,855 MW), and the West (approximately 2,130 MW) regions of the United States, with approximately 115 MW of additional generation capacity from the Company's thermal assets. NRG's principal domestic power plants consist of a mix of natural gas-, coal-, oil-fired and nuclear facilities, representing approximately 46%, 33%, 16% and 5% of the Company's total domestic generation capacity, respectively. In addition, 15% of NRG's domestic generating facilities have dual or multiple fuel capacity, which allows plants to dispatch with the lowest cost fuel option, and consist primarily of baseload, intermediate and peaking power generation facilities, the ranking of which is referred to as the Merit Order, and also include thermal energy production plants. The sale of capacity and power from baseload generation facilities accounts for the majority of the Company's revenues and provides a stable source of cash flow. In addition, NRG's generation portfolio provides the Company with opportunities to capture additional revenues by selling power during periods of peak demand, offering capacity or similar products to retail electric providers and others, and providing ancillary services to support system reliability.

The Company's strategy is reflected in five major initiatives, described below. These initiatives are designed to enable the Company to take advantage of opportunities and surmount the challenges faced by the power industry.

1. **FORNRG** is a companywide effort designed to increase the return on invested capital, or ROIC, through operational performance improvements to the Company's asset fleet, along with a range of initiatives at plants and at corporate offices to reduce costs or, in some cases, generate revenue. The **FORNRG** earnings accomplishments disclosed in NRG's SEC filings and press releases include both recurring and one-time improvements measured from a 2004 baseline, with the exception of the Texas region where benefits are measured using 2005 as the base year. For plant operations, the program measures cumulative current year benefits using current gross margins multiplied by the change in baseline levels of certain key performance indicators. The plant performance benefits include both positive and negative results for plant reliability, capacity, heat rate and station service.

2.

Repowering NRG is a comprehensive portfolio redevelopment program designed to develop, construct and operate new multi-fuel, multi-technology, highly efficient and environmentally responsible generation capacity over the next decade. Through this initiative, the Company anticipates retiring certain existing units and adding new generation to meet growing demand in the Company's core markets, with an emphasis on new capacity that is expected to be supported by long-term hedging programs, including power purchase agreements, or PPAs, and financed with limited or non-recourse project financing.

Table of Contents

3. **econrg** represents NRG's commitment to environmentally responsible power generation. econrg seeks to find ways to meet the challenges of climate change, clean air and water, and protecting our natural resources while taking advantage of business opportunities. This initiative builds upon its foundation in environmental compliance and embraces environmental initiatives for the benefit of our communities, employees and shareholders, such as encouraging investment in new environmental technologies, pursuing activities that preserve and protect the environment and encouraging changes in the daily lives of our employees.
4. **Future NRG** is the Company's workforce planning and development initiative and represents NRG's strong commitment to planning for future staffing requirements to meet the on-going needs of the Company's current operations in addition to the Company's *Repowering* NRG initiatives. Future NRG encompasses analyzing the demographics, skill set and size of the Company's workforce in addition to the organizational structure with a focus on succession planning, training, development, staffing and recruiting needs. Included under the Future NRG umbrella is NRG University, which provides leadership, managerial, supervisory and technical training programs and individual skill development courses.
5. **NRG Global Giving** Respect for the community is one of NRG's core values. Our Global Giving Program invests NRG's resources to strengthen the communities where we do business and seeks to make community investments in four FOCUS areas: community and economic development, education, environment and human welfare.

NRG's 2007 Annual Report on Form 10-K includes a detailed discussion of various items impacting its business, results of operations and financial condition. These include:

Introduction and Overview section which provides a description of NRG's business segments;

Strategy section;

Business Environment section, including how regulation, weather, and other factors affect NRG's business; and

Critical Accounting Policies section.

Critical accounting policies are the accounting policies that are most important to the portrayal of NRG's financial condition and results of operations and require management's most difficult, subjective or complex judgment. NRG's critical accounting policies include revenue recognition and derivative accounting, income taxes and valuation allowance for deferred taxes, evaluation of assets for impairment and other than temporary decline in value, goodwill and other intangible assets, and contingencies.

This discussion and analysis explains the general financial condition and the results of operations for NRG, including:

factors which affect the business;

earnings and costs in the periods presented;

changes in earnings and costs between periods;

sources of earnings;

impact of these factors on NRG's overall financial condition;

expected future expenditures for capital projects; and

expected sources of cash for further operations and capital expenditures.

As you read this discussion and analysis, refer to the consolidated statements of income which present the results of operations for the three months ended March 31, 2008 and 2007. NRG analyzes and explains the differences between periods in the specific line items of the consolidated statements of income.

NRG has organized the discussion and analysis as follows:

changes to the business environment during the period;

35

Table of Contents

results of operations beginning with an overview of NRG's consolidated results, followed by a more detailed discussion of those results by major operating segment;

financial condition, addressing liquidity, the sources and uses of cash, capital resources and commitments; and

known trends that will affect its results of operation and financial condition in the future.

Changes in Accounting Standards

See Note 1 to the condensed consolidated financial statements of this Form 10-Q as found in Item 1 for a discussion of recent accounting developments.

Environmental Matters

Carbon Update

At the national level and at various regional and state levels, policies are under development to regulate Greenhouse Gases, or GHG, emissions, including CO₂, the most common pollutant, thereby effectively putting a cost on such emissions in order to create financial incentive to reduce them. It is almost certain that GHG regulatory schemes will encompass power plants, with the impact on the Company's financial performance depending on a number of factors, including the overall level of GHG reductions required under any such regulation, the price and availability of offsets, and the extent to which NRG would be entitled to receive GHG emissions allowances without having to purchase them in an auction or on the open market. While the passing and timing of legislation remains uncertain, the Company expects that the impact of such legislation on the Company's financial performance, as such legislation is currently proposed, will have a minimal impact through the next decade. Thereafter, the impact would depend on the level of success of the Company's multifold strategy, which includes (a) shaping public policy with the objective being constructive and effective federal GHG regulatory policy, and (b) pursuing its *Repowering* NRG and econrg programs. Information regarding the Company's multifold strategy is discussed in greater detail in Part I, Item 1, Carbon Update in NRG Energy, Inc.'s 2007 Annual Report on Form 10-K for the fiscal year ended December 31, 2007.

On April 2, 2007, the United States Supreme Court issued a decision in *Massachusetts v. EPA*, 127 S.Ct. 1438 (2007), that CO₂ is an air pollutant and USEPA has authority under Title II of the Clean Air Act to regulate GHG emissions from new motor vehicles. The treatment of GHG is contingent upon an official finding by USEPA on whether GHG emissions may endanger public health and the environment. While specific to mobile sources, the outcome would be applicable to the regulation of stationary sources including electric generating units. On March 27, 2008, EPA publicly announced their intent to issue an advanced notice of proposed rulemaking, or ANPR, soliciting comments on whether and how GHG emissions should be regulated by the Agency, including the implication on both mobile and stationary sources. On April 2, 2008, state and environmental group petitioners in *Massachusetts v. USEPA* asked the U.S. Court of Appeals for the D.C. Circuit to issue an order giving EPA 60 days to make an official finding on whether GHG emissions may endanger public health and the environment and, therefore, are regulated pollutants under existing laws. At this time, NRG cannot predict the outcome of the petition, ANPR, any resulting changes to federal regulations, or the impact on Company operations.

Federal Environmental Initiatives

Air On May 18, 2005, the USEPA published the Clean Air Mercury Rule, or CAMR, to permanently cap and reduce mercury emissions from coal-fired power plants. CAMR imposed limits on mercury emissions from new and existing coal-fired plants and created a market-based cap-and-trade program to reduce nationwide utility emissions of mercury in two phases, 2010 and 2018. The rule was challenged by New Jersey and ten other states. On February 8, 2008, the U.S. Court of Appeals for the D.C. Circuit vacated USEPA's rule delisting coal- and oil-fired electric generating units from regulation under CAA §112 (the *Delisting Rule*) and CAMR. Power plant emissions are now subject to Section 112 of the Clean Air Act which requires installation of maximum achievable control technology, or MACT, to reduce emissions. The USEPA plans to develop MACT standards and existing power plants will need to provide plans to meet the new requirements. Certain states in which NRG operates coal plants, such as Delaware, Massachusetts and New York, adopted state implementation plans in lieu of the CAMR federal implementation plan

and these state rules remain unchanged. Texas and Louisiana adopted the federal CAMR. At this time it is not possible to predict the impact on NRG facilities in these states.

On May 12, 2005, the USEPA published the Clean Air Interstate Rule, or CAIR. This rule applies to 28 eastern states and the District of Columbia, or D.C., and caps both SO₂ and NO_x emissions from power plants in two phases; 2010 and 2015 for SO₂ and

Table of Contents

2009 and 2015 for NO_x. CAIR will apply to some of the Company's power plants in New York, Massachusetts, Connecticut, Delaware, Louisiana, Illinois, Pennsylvania, Maryland and Texas. On March 25, 2008, the U.S. Court of Appeals for the D.C. Circuit heard oral argument on challenges to the Clean Air Interstate Rule, or CAIR, in *North Carolina v. EPA*, a consolidated case which incorporates numerous suits filed by state and industry petitioners.

The legal challenges to both the CAIR and CAMR regulations may alter the composition and rate of spending for environmental retrofits at our facilities until the regulations becomes more certain. This may be most felt in states such as Texas and Louisiana which adopted the federal CAMR rather than a state implementation plan. The full impact of these legal challenges on the scope and timing of environmental retrofits cannot be determined at this time.

On March 12, 2008 the USEPA strengthened the primary and secondary ground level ozone National Ambient Air Quality Standards, or NAAQS, (8 hour average) from 0.08 ppm to 0.075 ppm. The USEPA plans to finalize ozone non-attainment regions by March 2010 and states would likely submit plans to come into attainment by 2013. The Company is unable to predict with certainty the impact of the states' future recommendations on NRG's operations.

Regional Environmental Initiatives

Northeast Region - On December 20, 2005, ten northeastern states entered into a Memorandum of Understanding, or MOU, to create the Regional Greenhouse Gas Initiative, or RGGI, to establish a cap-and-trade GHG program for electric generators. These RGGI states are in the process of promulgating state regulations needed for implementation of the program, which will become effective on January 1, 2009. Electric generating units in RGGI will have to procure one allowance for every U.S. ton emitted with true up for 2009-2011 occurring in 2012. The RGGI states plan to provide allowances through quarterly auctions, the first of which could be held as early as September 2008. NRG units located in Connecticut, Delaware, Maryland, Massachusetts and New York emitted approximately 12 million tonnes (13 million US tonnes) in 2007. The impact of RGGI on power prices (and thus on the Company's financial performance), indirectly through generators seeking to pass through the cost of their CO₂ emissions, cannot be predicted. However, NRG believes that due to the absence of allowance allocations under RGGI, the direct financial impact on NRG is likely to be negative as the Company will incur costs in the course of securing the necessary allowances and offsets at auction and in the market.

Regulatory Matters

As an operator of power plants and a participant in the wholesale markets, NRG is subject to regulation by various federal and state government agencies. In addition, NRG is subject to the market rules, procedures, and protocols of the various ISO markets in which NRG participates. These wholesale power markets are subject to ongoing legislative and regulatory changes. In some of NRG's regions, interested parties have advocated for material market design changes, including the elimination of a single clearing price mechanism, as well as proposals to re-regulate the markets or require divestiture by generating companies in order to reduce their market share. The Company cannot predict the future design of the wholesale power markets or the ultimate effect that the changing regulatory environment will have on NRG's business.

Northeast Region

New York - On March 7, 2008, FERC issued an order accepting the NYISO's proposed market reforms to the in-city Installed Capacity, or ICAP, market, with only minor modifications. The NYISO proposal retains the existing ICAP market structure, but imposes additional market power mitigation on the current owners of Consolidated Edison's divested generation units in New York City (which include NRG's Arthur Kill and Astoria facilities), who are deemed to be pivotal suppliers. Specifically, the NYISO proposal imposes a new reference price on pivotal suppliers and requires bids to be submitted at or below the reference price. The new reference price is derived from the expected clearing price based upon the intersection of the supply curve and the ICAP Demand Curve if all suppliers bid as price-takers. The NYISO's proposed reforms became effective March 27, 2008.

PJM - On January 31, 2008, PJM submitted to FERC a proposal to increase its Cost of New Entry, which is a critical component of the demand curve in the RPM market, for the 2011/2012 delivery year. On April 4, 2008, FERC rejected this proposed revision on procedural grounds.

Texas Region

ERCOT has adopted Texas Nodal Protocols that will revise the wholesale market design to incorporate locational marginal pricing (in place of the current ERCOT zonal market). Major elements of the Texas Nodal Protocols include

the continued capability for bilateral contracting of energy and ancillary services, a financially binding day-ahead market, resource-specific energy and ancillary service bid curves, the direct assignment of all congestion rents, nodal energy prices for resources, aggregation of nodal to zonal energy prices for loads, congestion revenue rights (including pre-assignment for public power entities), and pricing safeguards.

Table of Contents

The PUCT approved the Texas Nodal Protocols on April 5, 2006, and full implementation of the new market design is scheduled to begin in December 2008.

In addition, the PUCT has increased the offer cap for ERCOT's ancillary service and balancing energy markets to \$2,250 per megawatt and megawatt hour, to increase to \$3,000 two months after implementation of the Texas Nodal market design.

West Region

CAISO has indicated that its Market Redesign and Technology Upgrade, or MRTU, program will not be implemented before the summer peak season. On September 21, 2006, FERC conditionally accepted the MRTU proposal. Significant components of the MRTU include (i) locational marginal pricing of energy; (ii) a more effective congestion management system; (iii) a day-ahead market; and (iv) an increase to the existing bid caps. NRG considers these market reforms to be a positive development for its assets in the region.

Table of Contents**Consolidated Results of Operations**

The following table provides selected financial information for the Company for the three months ended March 31, 2008 and 2007:

(In millions except otherwise noted)	Three months ended March 31,

Consolidated Discussion
Operating Revenues

Operating revenues increased by \$3 million during the three months ended March 31, 2008, compared to 2007. This was primarily due to:

Energy revenues energy revenues decreased by \$11 million during the three months ended March 31, 2008, compared to 2007:

- o *Texas* energy revenues decreased by \$17 million due to lower contracted energy prices. This was partially offset by higher merchant market prices.
- o *Northeast* energy revenues decreased by \$8 million due to a \$15 million reduction in contracted bilateral revenue, and a \$2 million, or 1%, decrease in generation across the region. This was partially offset by a \$9 million increase resulting from an average 3% price increase to \$75 MWh across the region.
- o *South Central* energy revenues increased by \$13 million due to a \$4 million increase in contract energy revenue primarily driven by higher fuel cost pass-through adjustments and a 1% increase in MWh sold to the region's cooperative customers. There was also a \$9 million increase in merchant energy revenue attributable to 12% increased coal generation from fewer planned outage hours.

Table of Contents

Capacity revenues capacity revenues increased by \$74 million during the three months ended March 31, 2008, compared to 2007:

- o *Texas* capacity revenues increased by \$26 million due to higher capacity contract volumes.
- o *Northeast* capacity revenues increased by \$27 million due to a \$15 million increase in PJM assets reflecting the recognition of a full quarter of capacity revenue from the RPM capacity market, an \$8 million increase in NEPOOL assets driven by additional revenue recognized on the Norwalk RMR contract, and a \$4 million increase in New York assets from favorable contract prices. Both the RPM capacity market and Norwalk RMR contract first became effective in June 2007. These increases were offset by lower prices resulting from a reduction in Installed Reserve Margin as well as competitive bidding strategies in New York City.
- o *South Central* capacity revenues increased by \$5 million due to a \$3 million increase in new peak loads from cooperative customers (including higher pass-through of transmission cost) and a \$2 million increase in merchant capacity revenue from the Rockford plants under RPM market prices in PJM.
- o *West* capacity revenues increased by \$12 million due to a \$7 million increase in revenue from a new tolling agreement at the Long Beach plant, a \$4 million increase in Resource Adequacy revenue from new agreements which became effective in 2008 and improved performance at the El Segundo plant.

Contract amortization increased by \$17 million due to an increase in spread between contract price and market price used to value the contract at the Acquisition date.

Other revenues increased by \$14 million primarily due to a \$9 million increase in emission revenue and an \$8 million increase in natural gas sales.

Risk management activities revenues from risk management activities include all derivative activity that does not qualify for hedge accounting and the ineffective portion associated with hedged transactions. Such revenues decreased by \$86 million during the three months ended March 31, 2008, compared to 2007. The breakdown of changes by region is as follows:

(In millions)	Three months ended March 31, 2008				Three months ended March 31, 2007			
	Texas	Northeast	South Central	Total	Texas	Northeast	South Central	Total
Net gains/(losses) on settled positions, or <i>financial revenues</i>	\$ (2)	\$ 10	\$ 4	\$ 12	\$ 18	\$ 29	\$	\$ 47

Mark-to-market results

Reversal of previously recognized unrealized gains on settled positions related to economic hedges

Reversal of previously recognized unrealized (gains)/losses on settled positions related to trading

	(7)	(3)		(10)	(31)	(26)		(57)
	1	1	(7)	(5)	1	(9)	(5)	(13)

activity									
Net unrealized losses on open positions related to economic hedges	(113)	(29)		(142)	(10)	(25)			(35)
Net unrealized gains/(losses) on open positions related to trading activity	17	(17)	16	16	2	2	11		15
Subtotal mark-to-market results	(102)	(48)	9	(141)	(38)	(58)	6		(90)
Total derivative gain/(loss)	\$ (104)	\$ (38)	\$ 13	\$ (129)	\$ (20)	\$ (29)	\$ 6		\$ (43)

NRG's first quarter 2008 loss was comprised of \$141 million of mark-to-market losses offset by \$12 million in settled gains, or financial revenue. Of the \$141 million of mark-to-market losses, \$10 million represents the reversal of mark-to-market gains recognized on economic hedges and \$5 million represents the reversal of mark-to-market gains recognized on trading activity during 2007. Both of these losses ultimately settled as financial revenues during 2008. The \$142 million loss from economic hedge positions is comprised of a \$97 million decrease in value of forward sales of electricity and fuel due to unfavorable power and gas prices and a \$45 million loss from hedge accounting ineffectiveness related to gas trades in the Texas region due to a change in the correlation between natural gas and power prices as of March 31, 2008.

Since these hedging activities are intended to mitigate the risk of commodity price movements on revenues and cost of energy sold, the changes in such results should not be viewed in isolation, but rather taken together with the effects of pricing and cost changes on energy revenues, which are recorded net of financial instruments hedges that are afforded hedge accounting treatment, and cost of energy. During the course of and prior to 2007, NRG hedged a portion of the Company's 2007 and 2008 generation. Since that time, the settled and forward prices of electricity and natural gas have increased, resulting in the recognition of unrealized mark-to-market forward losses. In 2007, NRG recognized forward mark-to-market losses as forward prices of electricity increased relative to its forward positions.

Table of Contents***Cost of Operations***

Cost of operations for the three months ended March 31, 2008 increased by \$23 million compared to 2007, and as a percentage of revenues it increased from 60% in 2007 to 62% in 2008:

Texas cost of operations increased by \$19 million, due to a \$21 million increase in cost of energy and a \$3 million decrease in other operating costs. The \$21 million increase in cost of energy is driven by a \$15 million increase from the establishment of a loss reserve for a coal contract dispute, a \$10 million increase in natural gas expense resulting from a \$1.60 per MMBtu rise in average gas prices, a \$6 million increase in ancillary services and other ERCOT fees, a \$4 million increase in purchased power, and a \$3 million increase in other baseload fuel. The increases in cost of energy were partially offset by a decrease in amortized fuel expense of \$17 million. The decrease in other operating costs of \$3 million is due to a \$5 million decrease in property taxes related to a higher initial estimate in 2007 compared to 2008, offset by a \$2 million increase in maintenance cost due to the timing of planned outages at the region's coal fired facilities.

Northeast cost of operations decreased by \$1 million due to a \$7 million decrease in maintenance costs offset by a \$6 million increase in fuel costs. The \$7 million decrease in maintenance costs are a result of fewer planned outages at the Indian River and Dunkirk plants. This decrease was offset by a \$6 million increase in fuel costs, which includes \$22 million in higher coal expenses resulting from a rise in coal generation and coal transportation costs and \$14 million in higher gas expenses related to increased gas fired generation in New York City. These increases were offset by a \$30 million reduction in oil expense driven by lower oil fired generation primarily at the Middletown and Oswego facilities.

South Central cost of operations increased by \$4 million. This increase is due to a \$7 million increase in fuel costs, which includes \$6 million in higher coal expenses, a \$3 million increase in transmission costs reflecting an increase in merchant energy sales and a \$2 million increase in natural gas costs tied to higher generation from the gas fired Rockford plants. These increases were offset by a \$4 million reduction in purchased energy due to a 12% increase in coal generation. Other operating expenses decreased by \$3 million due to reduced maintenance expense related to the later start of the 2008 spring outages compared to the prior year.

General and Administrative

NRG's general and administrative, or G&A, costs for the three months ended March 31, 2008 decreased by \$10 million compared to 2007, and as a percentage of revenues was 6% and 7% in 2008 and 2007, respectively. This decrease was due to:

Franchise tax the Company's Louisiana state franchise tax decreased by approximately \$6 million. Louisiana franchise tax is assessed based on the Company's total debt and equity that significantly increased following the acquisition of Texas Genco LLC on February 2, 2006. A retroactive adjustment to franchise tax expense was recorded in the first quarter 2007.

Other G&A expenses other G&A expenses declined by approximately \$4 million primarily due to reductions in insurance, relocation and information technology consultant expenses.

Development Costs

NRG's development costs were \$12 million for the three months ended March 31, 2008, a decrease of \$11 million from 2007. These costs were due to the Company's *Repowering* NRG projects:

Texas on September 24, 2007, NRG filed a Combined Operating License Application, or COLA, with the NRC to build and operate two new nuclear units at the STP site. During the first quarter 2007, NRG incurred \$17 million in development costs related to the STP units 3 and 4 project. Commencing January 1, 2008, NRG began to capitalize the costs to continue to develop STP units 3 and 4. Accordingly, there are no such development expenses reflected in results of operations for the first quarter 2008.

Table of Contents

Wind projects approximately \$6 million in development costs related to wind projects primarily in Texas, an increase of approximately \$4 million over the comparable 2007 quarter.

Other projects approximately \$6 million in development costs related to other domestic *Repowering* NRG projects, an increase of approximately \$2 million over the first quarter 2007.

Gain on Sale of Assets

NRG's gain on sale of assets for the three months ended March 31, 2007 was approximately \$17 million. On January 3, 2007, NRG completed the sale of the Company's Red Bluff and Chowchilla II power plants resulting in a pre-tax gain of approximately \$18 million. The Company reported no sales of assets for the first quarter 2008.

Equity in Earnings of Unconsolidated Affiliates

NRG's equity earnings from unconsolidated affiliates for the three months ended March 31, 2008 decreased by \$17 million compared to 2007. This decrease was primarily due to an \$18 million mark-to-market unrealized loss on a forward contract for the sale of natural gas executed to hedge the future power generation from the Sherbino I Wind Farm equity investment.

Other Income, Net

NRG's other income for the three months ended March 31, 2008 decreased by \$6 million compared to 2007. This decrease was primarily due to reduced interest income of approximately \$4 million from lower market interest rates on cash deposits.

Interest Expense

NRG's interest expense for the three months ended March 31, 2008 decreased by \$26 million compared to 2007. This decrease was primarily due to interest savings from the \$300 million prepayment of the Term B loan under the Senior Credit Facility on December 31, 2007, accompanied by a reduction on the variable interest rates on long-term debt, and from more capitalized interest due to *Repowering* NRG projects under construction.

Income Tax Expense

Income tax expense decreased by \$1 million for the three months March 31, 2008, compared to 2007. The effective tax rate was 52.9% and 47.4% for the three months ended March 31, 2008 and 2007, respectively. The decrease in income tax expense was primarily due to a decrease in income and in permanent differences:

(In millions except otherwise stated)

Three months Ended March 31,	2008	2007
Income from continuing operations before income taxes	\$ 102	\$ 116
Tax at 35%	36	41
State taxes, net of federal benefit	6	6
Foreign operations	(3)	(1)
Valuation allowance	8	
Foreign dividends	6	5
Non-deductible interest	3	3
Other permanent differences	(2)	1
Income tax expense	\$ 54	\$ 55
Effective income tax rate	52.9%	47.4%

The decrease in income tax expense was primarily due to:

Decrease in profits income before tax decreased by \$14 million, with a corresponding decrease of approximately \$5 million in income tax expense.

Permanent differences the Company's effective tax rate differed from the US statutory rate of 35% due to:

Table of Contents

- o *Lower tax rates in foreign jurisdictions* lower income tax rates at the Company's foreign locations resulted in additional income tax benefit during the first quarter 2008 compared to 2007 of \$2 million.
- o *Section 1256 capital loss* During the first quarter 2008, the Company had generated net capital losses primarily due to derivative trading activity for which the Company has determined a valuation allowance of \$9 million of federal tax expense and \$1 million of state and local tax expense is necessary. The Company reduced its foreign valuation allowance by \$1 million due to the utilization of foreign NOL.

The effective income tax rate may vary from period to period depending on, among other factors, the geographic and business mix of earnings and losses and changes in valuation allowances in accordance with SFAS 109. These factors and others, including the Company's history of pre-tax earnings and losses, are taken into account in assessing the ability to realize deferred tax assets.

Income from Discontinued Operations, Net of Income Tax Expense

Discontinued operations were comprised of the results of ITISA. NRG classifies as discontinued operations the income from operations and gains/losses recognized on the sale of projects that were sold or were deemed to have met the required criteria for such classification pending final disposition. For the three months ended March 31, 2008 and 2007, NRG recorded income from discontinued operations, net of income tax expense, of \$4 million and \$4 million, respectively.

Table of Contents**Results of Operations Regional Discussions**

The following is a detailed discussion of the results of operations of NRG's major wholesale power generation business segments.

Texas

For a discussion of the business profile of the Company's Texas operations, see pages 22-25 of NRG Energy, Inc.'s 2007 Annual Report on Form 10-K.

Selected income statement data

(In millions except otherwise noted)

Three months ended March 31,	2008	2007	Change %
Operating Revenues			
Energy revenue	\$ 546	\$ 563	(3)%
Capacity revenue	118	92	28
Risk management activities	(104)	(20)	420

Cost of energy	258	237	9
Other operating expenses	164	185	(11)
Depreciation and amortization	113	114	(1)
Operating Income	\$ 114	\$ 159	(28)
MWh sold (in thousands)	11,031	10,978	
MWh generated (in thousands)	10,756	10,742	
Business Metrics			
Average on-peak market power prices (\$/MWh)	70.48	57.48	23
Cooling Degree Days, or CDDs (a)	74	119	(38)
CDD's 30 year rolling average	95	94	1
Heating Degree Days, or HDDs (a)	1,053	1,134	(7)
HDD's 30 year rolling average	1,132	1,122	1%

(a) *National Oceanic and Atmospheric Administration-Climate Prediction Center* A CDD represents the number of degrees that the mean temperature for a particular day is above 65 degrees Fahrenheit in each region. An HDD represents the number of degrees that the mean temperature for a

particular day is below 65 degrees Fahrenheit in each region. The CDDs/HDDs for a period of time are calculated by adding the CDDs/HDDs for each day during the period.

Operating Income

For the three months ended March 31, 2008, compared to 2007, operating income decreased by \$45 million due to: *Capacity Revenues* increased by \$26 million related to higher sales under long-term bilateral contracts with a capacity component in 2008.

Energy Revenues - decreased by \$17 million primarily due to lower contracted energy revenue as the region shifts transactions to provide more contracted capacity versus contracted energy. Decreased contract energy revenue was partially offset by higher market prices on open merchant positions within the market, as well as higher merchant sales volumes.

Cost of Energy increased by \$21 million due to the recording of a loss reserve of \$15 million related to a coal contract dispute, combined with increased gas prices in 2008 of about \$1.60 per MMBtu.

Emissions Revenues - increased by \$11 million in Texas due to an intercompany sale of emissions credits to Corporate.

Risk Management Activities decreased by \$84 million due to an increase in unrealized derivative losses of \$72 million and lower gains on settled financial transactions by \$20 million. These increases in realized and unrealized losses are attributable to a generally rising price environment in the first quarter 2008 for both gas and power.

Contract Amortization increased by \$16 million in 2008 an increase in spread between contract prices and market prices used to value the contract at Acquisition date.

Other Operating Costs declined by \$21 million due to decreased nuclear development expenses, and decreased property taxes as a result of a higher initial estimate in 2007 than in 2008.

Table of Contents**Operating Revenues**

Total operating revenues from the Texas region decreased by \$46 million during the three months ended March 31, 2008, compared to 2007, due to:

Capacity Revenue increased by \$26 million due to a higher number of capacity contracts in 2008. While capacity auction contracts are gradually decreasing from year to year, 2008 has a number of bilateral contracts with a capacity component that resulted in higher capacity revenue.

Energy Revenues decreased by \$17 million due to decreased contract prices in lieu of higher capacity payments and lower overall contracted prices in 2008. As a whole, contract energy revenue decreased compared to 2007, due to lower realized contract prices by \$2 per MWh. This was partly offset by higher merchant prices in the first quarter 2008.

Contract amortization increased by \$16 million in the first quarter 2008 an increase in spread between contract prices and market prices used to value the contract at Acquisition date.

Other revenues other revenues increased by \$13 million mainly due to an \$11 million increase in intercompany emission credit sales to the Corporate.

Risk management activities The Texas region recorded total derivative losses of \$104 million in the quarter ended March 31, 2008 compared to a \$20 million loss for the quarter ended March 31, 2007. The 2008 derivative loss was comprised of \$102 million of mark-to-market losses and \$2 million in settled losses, or financial revenue. The 2007 derivative loss of \$20 million is composed of \$38 million in unrealized derivative losses and \$18 million in settled financial revenue gains. Of the \$102 million of mark-to-market losses, \$7 million represents the reversal of mark-to-market losses previously recognized on economic hedges and \$1 million from the reversal of mark-to-market gains previously recognized on trading activity. Both of these losses ultimately settled as financial revenues during the first quarter 2008. The remaining \$96 million of mark-to-market losses were comprised of a \$113 million loss from economic hedge positions which was comprised of a \$69 million unrealized loss in the value of forward sales of electricity and fuel due to increased power and natural gas prices and a \$44 million loss from hedge accounting ineffectiveness. This ineffectiveness was primarily related to gas swaps and collars due to a change in the correlation between natural gas and power. Additionally, the region recognized an unrealized mark-to market gain of \$17 million on trading transactions.

Cost of Energy

Cost of energy for the Texas region increased by \$21 million during the three months ended March 31, 2008, compared to 2007, due to:

Baseload fuel expense increased by \$18 million. While coal fired generation decreased by 1%, coal expense increased \$15 million due to recognition of a loss reserve related to a coal contract dispute. Additionally, nuclear generation increased 8%, or 180 thousand MWh.

Natural gas expense increased by \$10 million despite a 9%, or 71 thousand MWh decrease in gas fired generation, due to gas price increases by an average of \$1.60 per MMBtu.

Purchased ancillary service expense and ERCOT ISO fees increased by \$6 million due to increased cost to meet ancillary obligations and ERCOT fee increases starting in June 2007 related to the development of a nodal market.

Purchased power increased by \$4 million due to higher market prices for power purchased during unplanned outages at our baseload plants.

This was partially offset by:

Amortized fuel costs decreased by approximately \$17 million due to the roll off of existing contracts in 2007.

Other Operating Expenses

Other operating expenses for the Texas region decreased by \$21 million during the three months ended March 31, 2008, compared to 2007, due to:

Development costs decreased \$17 million, primarily related to spending on STP units 3 and 4 which is being capitalized beginning in 2008 following the docketing of the Company's COLA with the NRC.

Property taxes decreased \$5 million, due to a higher initial assessment in 2007 than in 2008.

These decreases were partially offset by:

Planned outages O&M expense increased by \$2 million, primarily related to the timing of outages at Limestone.

Table of Contents**Northeast Region**

For a discussion of the business profile of the Northeast region, see pages 25-28 of NRG Energy, Inc.'s 2007 Annual Report on Form 10-K.

Selected income statement data

(In millions except otherwise noted)

(a) *National Oceanic and Atmospheric Administration-Climate Prediction Center* A CDD represents the number of degrees that the mean temperature for a particular day is above 65 degrees Fahrenheit in each region. An HDD represents the number of degrees that the mean temperature for a particular day is below 65 degrees Fahrenheit in each region. The CDDs/HDDs for a period of time are

calculated by adding the CDDs/HDDs for each day during the period.

Operating Income

Operating income increased by \$21 million for the three months ended March 31, 2008, compared to 2007, due to:

Operating revenues increased by \$18 million due to the favorable impact of capacity markets and higher sales of emission allowances, partially offset by higher losses in the region's risk management activities.

Other operating expenses decreased by \$10 million primarily reflecting lower maintenance expenses at the Indian River and Dunkirk plants due to timing of annual outages.

These favorable variances are partially offset by:

Cost of energy increased by approximately \$6 million, despite a 1% decrease in generation, due primarily to higher coal transportation costs across the region and increased coal commodity costs at the Somerset plant.

Operating Revenues

Operating revenues increased by \$18 million for the three months ended March 31, 2008, compared to 2007. The primary drivers were:

Capacity revenues increased by \$27 million, of which \$15 million was from the region's PJM assets, \$8 million was from the region's NEPOOL assets and \$4 million was from the region's New York assets.

- o *PJM* The increase was due to recognizing a full quarter's capacity revenue in first quarter 2008 as a result of the RPM capacity market which became effective on June 1, 2007.
- o *NEPOOL* The increase was due to additional revenue recognized on the Norwalk RMR contract, which became effective June 19, 2007.

Table of Contents

- o *NYISO* The increase in New York was attributable to favorable capacity cash flow hedges more than offsetting a decline in prices driven by both the NYISO's 1.5% reduction in the Installed Reserve Margin effective May 1, 2007 and lower capacity prices in New York City due to competitor bidding strategies. *Other revenues* increased by \$8 million, of which approximately \$6 million was due to increased activity in the trading of emission allowances.

These were partially offset by:

Risk management activities The Northeast region recorded \$38 million and \$29 million in risk management losses in the quarters ended March 31, 2008 and 2007, respectively. The region's 2008 losses were comprised of \$48 million of mark-to-market losses and \$10 million in settled gains, or financial revenue. The \$29 million risk management losses for the comparable 2007 period were comprised of \$58 million unrealized mark-to-market losses offset by \$29 million in settled gains.

Energy revenues decreased by approximately \$8 million, reflecting a \$15 million reduction in contracted bilateral energy revenue and a \$2 million reduction from lower generation, partially offset by a \$9 million increase from realized prices that rose 3% on average.

- o *Contracted energy* The decrease resulted from fewer bilateral contracts and lower net revenue on the remaining contracts.
- o *Generation* Total generation decreased 1%, as a 352 thousand MWh decline for oil fired generation was partially offset by an 8% increase in base load coal generation. The decline in oil-fired generation was primarily driven by a 151 thousand MWh decrease at our Middletown plant due to timing of outages and a 152 thousand MWh reduction in Oswego's generation following a mild winter combined with less economic production given rising oil prices. The increase in base load coal generation reflected a 292 thousand MWh increase at the Indian River plant due to timing of planned outages and improved plant performance.
- o *Price* on average, realized prices increased 3% to \$75/MWh, compared with \$73/MWh in the prior year.

Cost of Energy

Cost of energy increased by approximately \$6 million despite the 1% decrease in generation. Coal expense increased by \$22 million primarily due to an increase in coal generation and increased coal transportation costs tied to fuel surcharges. Gas expense increased by \$14 million primarily due to increased generation from our gas-fired generation in New York City. These unfavorable variances were partially offset by a \$30 million reduction in oil costs driven by lower oil fired generation primarily at the Middletown and Oswego facilities.

Other Operating Expenses

Other operating expenses decreased by \$10 million for the three months ended March 31, 2008, compared to 2007, due to:

Plant Operating & Maintenance spending decreased \$7 million due to lower maintenance costs resulting from less planned outage work at our Indian River and Dunkirk plants.

G&A expenditures decreased by \$3 million primarily due to lower corporate allocations and insurance costs.

MWh generated (in thousands)	3,024	2,708	12
Business Metrics			
Average on-peak market power prices (\$/MWh)	67.84	57.84	17
Cooling Degree Days, or CDDs(a)	5	27	(81)
CDD's 30 year rolling average	31	29	7
Heating Degree Days, or HDDs(a)	1,885	1,751	8
HDD's 30 year rolling average	1,914	1,895	1

(a) *National Oceanic and Atmospheric Administration-Climate Prediction Center* A CDD represents the number of degrees that the mean temperature for a particular day is above 65 degrees Fahrenheit in each region. An HDD represents the number of degrees that the mean temperature for a particular day is below 65 degrees Fahrenheit in each region. The CDDs/HDDs for a

period of time are calculated by adding the CDDs/HDDs for each day during the period.

Operating Income

Operating income for the region increased by \$30 million for the three months ended March 31, 2008, compared to 2007, due to a combination of higher plant availability driving a 12% increase in generation and lower operating expenses.

Operating Revenues

Operating revenues increased by \$29 million for the three months ended March 31, 2008, compared to 2007, due to:

Energy revenues increased by approximately \$13 million. Contract energy revenues increased by \$4 million due to higher fuel cost pass-through adjustments for the region's cooperative customers and a 1% increase in total contract MWh sold. A 3.2% increase in MWh sold to cooperative customers was offset by an 8.4% decrease in MWh sales to other contract customers. Fewer planned outage hours during the quarter drove a 12% increase in coal generation leading to a \$9 million increase in merchant energy revenues.

Capacity revenues increased by approximately \$5 million of which \$3 million was attributable to new peak loads from our cooperative customers which determines capacity payments under those contracts combined with higher transmission pass-through costs and a \$2 million increase in merchant capacity from the Rockford plants which earn RPM capacity revenues from the PJM market.

Risk Management Activities gains of approximately \$13 million during 2008 compared to \$6 million in gains in 2007. The \$13 million gain includes a \$9 million unrealized gain related to the changes in fair value of forward derivative positions as compared to a \$5 million gain in the same period in 2007. This \$9 million gain includes a \$7 million loss from the roll-off of economic hedges in the quarter offset by \$16 million gain from trading activity. Risk management activity results in the first quarter 2008 included \$4 million in realized gains on settled power positions compared to a \$1 million realized gain in the first quarter 2007.

Table of Contents

Other revenues increased by approximately \$3 million due to intercompany sales of SO₂ allowances to Corporate in order to optimize the value of the Company's emission allowances in excess of current needs.

Cost of Energy

Cost of energy increased by \$7 million for the three months ended March 31, 2008, compared to 2007, due to:

Coal costs increased by approximately \$6 million, of which \$8 million was due to the 12% increase in coal generation partially offset by a \$2 million decrease in allocated rail car lease fees among the regions to better reflect the actual usage of the Company's railcar fleet.

Transmission costs increased by approximately \$3 million due to a \$1 million increase in network transmission costs, which are passed through to the region's cooperative customers, combined with a \$2 million increase in point-to-point transmission costs resulting from the increase in merchant energy sales.

Natural gas costs increased by approximately \$2 million due to higher generation from the gas fired Rockford plants.

This increase was offset by:

Purchased energy decreased by approximately \$4 million due to higher plant availability and as generation from the region's coal plant reduced the need for power purchases to support contract load.

Other Operating Expenses

Other operating expenses decreased by approximately \$8 million for the three months ended March 31, 2008, compared to 2007, due to:

Maintenance expense decreased by \$2 million compared to the first quarter of 2007 mainly due to the later start of the spring 2008 outages versus the prior year.

Franchise tax Louisiana state franchise tax decreased by approximately \$6 million as the prior year's first quarter results included a retroactive charge for higher franchise taxes influenced by the Company's total debt and equity following the acquisition of Texas Genco LLC in 2006.

Table of Contents**West Region**

calculated by adding the CDDs/HDDs for each day during the period.

Operating Income

Operating income increased by \$10 million for the three months ended March 31, 2008, compared to 2007, due to:

Capacity revenues increased by approximately \$12 million, primarily resulting from a new tolling agreement at the region's Long Beach plant and the sale of El Segundo Resource Adequacy, or RA, capacity:

- o *Long Beach* On August 1, 2007, NRG successfully completed the repowering of a 260 MW natural gas-fueled generating plant at its Long Beach generating facility, which contributed approximately \$7 million in capacity revenues for the three months ended March 31, 2008.
- o *El Segundo* In 2007, NRG entered into several RA sale agreements, that became effective in 2008, to sell a partial amount of El Segundo RA capacity. These agreements have contributed approximately \$4 million in capacity revenues for the three months ended March 31, 2008.

O&M expense decreased by approximately \$2 million due to an environmental liability recognized in 2007 related to our El Segundo facility.

This increase was offset by:

Cost of energy increased by \$1 million for the three months ended March 31, 2008, compared to 2007, as a result of RA buyback from Southern California Edison in support of the RA sale agreements mentioned in the above capacity revenue section.

Energy revenues decreased by approximately \$1 million due to the tolling agreement at the Encina plant that has resulted in the receipt of fixed monthly capacity payment in return for the right to schedule and dispatch from the plant.

Depreciation and amortization increased by \$1 million, reflecting the depreciation associated with the successful completion of the *Repowering* NRG project at Long Beach.

Table of Contents

Other revenues decreased emission credit revenue of \$1 million at the Long Beach plant due in part to the new tolling agreement.

Liquidity and Capital Resources***Liquidity Position***

As of March 31, 2008 and December 31, 2007, NRG's liquidity was approximately \$2.3 billion and \$2.7 billion, respectively, comprised of the following:

(In millions)

As of	March 31, 2008	December 31, 2007
Cash and cash equivalents	\$ 834	\$ 1,132
Restricted cash	39	29
Total cash	873	1,161
Synthetic letter of credit availability	471	557
Revolver credit facility availability	997	997
Total liquidity	\$ 2,341	\$ 2,715

Management believes that these amounts and cash flows from operations will be adequate to finance operating and maintenance capital expenditures, to fund dividends to NRG's preferred shareholders and other liquidity commitments. Management continues to regularly monitor the company's ability to finance the needs of its operating, financing and investing activity in a manner consistent with its intention to maintain a net debt to capital ratio in the range of 45-60%.

SOURCES OF FUNDS

The principal sources of liquidity for NRG's future operating and capital expenditures are expected to be derived from new and existing financing arrangements, asset sales, existing cash on hand and cash flows from operations.

Financing Arrangements***First and Second Lien Structure***

NRG has granted first and second priority liens to certain counterparties on substantially all of the Company's assets in the United States in order to secure certain obligations, which are primarily long-term in nature under certain power sale agreements and related contracts. NRG uses the first or second lien structure to reduce the amount of cash collateral and letters of credit that it would otherwise be required to post from time to time to support its obligations under these agreements. Within the first and second lien structure, the Company can hedge up to 80% of its baseload capacity and 10% of its non-baseload assets with these counterparties.

As part of the amendments to NRG's Senior Credit Facility entered into on June 8, 2007, the Company obtained the ability to move its current second lien counterparty exposure to the first lien, on a pari passu basis, with the Company's existing first lien lenders. In exchange for moving some second lien holders to a pari passu basis with the Company's first lien lenders, the counterparties agreed to relinquish letters of credit issued by NRG which they held as a part of their collateral package.

On March 31, 2008, the Company moved a second lien counterparty to a first lien position, resulting in the release of approximately \$57 million of letters of credit. As of March 31, 2008, and April 25, 2008, the net discounted exposure less collateral posted on the agreements and hedges that were subject to the first lien structure were approximately \$1.1 billion and \$1.6 billion, respectively. As of March 31, 2008, and April 25, 2008, the net discounted exposure less collateral posted on the agreements and hedges that were subject to the second lien structure were approximately \$382 million and \$579 million, respectively.

Table of Contents

The following table summarizes the amount of MWs hedged against the Company's baseload assets and as a percentage relative to the Company's forecasted baseload capacity under the first and second lien structure as of April 25, 2008:

Equivalent Net Sales secured by First and Second Lien Structure^(a)	2008^(b)	2009	2010	2011	2012	2013
In MW	3,924	4,875	3,730	3,430	1,542	824
As a percentage of total forecasted baseload capacity ^(c)	57%	70%	55%	51%	23%	15%

(a) *Equivalent Net Sales include natural gas swaps converted using a weighted average heat rate by region.*

(b) *2008 MW value consists of May through December positions only.*

(c) *Forecasted baseload capacity under the first and second lien structure represents 80% of the total Company's baseload assets.*

Common Stock Finance I Debt Extension

The Company's Senior Credit Facility and Senior Notes indentures contain provisions, or restricted payments, limiting the use of funds for transactions such as common share repurchases. To maintain restricted payment capacity under the Senior Notes indentures, in March 2008 the Company executed an arrangement with Credit Suisse to extend the notes and preferred interest maturities of NRG Common Stock Finance I, LLC, or CSF I, from October 2008 to June 2010. In addition, the settlement date for any share price appreciation beyond a 20% compound annual growth rate since the original date of purchase by CSF I was extended 30 days to early December 2008. As part of the extension, the Company also contributed 795,503 additional treasury shares to CSF I as additional collateral to maintain a blended interest rate in the CSF I facility of approximately 7.5%. Accordingly, the amount due at maturity in June 2010 for the CSF I notes and preferred interests is \$248 million.

Asset Sales**ITISA**

On December 18, 2007, NRG entered into a sale and purchase agreement to sell its 100% interest in Tosli, which holds all NRG's interest in ITISA, to Brookfield Power Inc., a wholly-owned subsidiary of Brookfield Asset Management Inc., a Canadian asset management company, focused on property, power and infrastructure assets. On April 28, 2008, NRG completed the sale and received \$288 million in cash proceeds. The sale process will remove approximately \$153 million of assets, including \$53 million of cash, and approximately \$116 million of liabilities, including \$61 million of debt, that are classified as discontinued assets and liabilities on the condensed consolidated balance sheet as of March 31, 2008. NRG expects to recognize a pre-tax gain of approximately \$250 million and a net pre-tax cash additions of approximately \$234 million, subject to a purchase price adjustment to be finalized within 90 days of the sale date. As discussed in Note 3, *Discontinued Operations*, the activities of Tosli and ITISA have been classified as discontinued operations.

USES OF FUNDS

The Company's requirements for liquidity and capital resources, other than for operating its facilities, can generally be categorized by the following: (1) commercial operations activities; (2) capital expenditures including *Repowering* NRG project deposits; (3) corporate financial transactions; and (4) debt service obligations.

Commercial Operations

NRG's commercial operations activities require a significant amount of liquidity and capital resources. These liquidity requirements are primarily driven by (i) margin and collateral posted with counterparties; (ii) initial collateral required to establish trading relationships; (iii) timing of disbursements and receipts (i.e., buying fuel before receiving energy revenues); and (iv) initial collateral for large structured transactions. As of March 31, 2008, commercial operations had total cash collateral outstanding of \$239 million, and \$338 million outstanding in letters of credit to third parties primarily to support its hedging activities.

Future liquidity requirements may change based on the Company's hedging activities and structures, fuel purchases, and future market conditions, including forward prices for energy and fuel and market volatility. In addition, liquidity requirements are dependent on NRG's credit ratings and general perception of its creditworthiness.

Table of Contents**Capital Expenditures and Repowering NRG Equity Investments in affiliates**

For the three months ended March 31, 2008 the Company's capital expenditures were approximately \$164 million, of which \$93 million was related to *Repowering* NRG projects. The following table summarizes the Company's capital expenditures for the three months ended March 31, 2008 and the estimated capital expenditure and repowering investments forecast for the remainder of 2008.

(In millions)	Maintenance	Environmental	Repowering	Total
Northeast	\$ 3	\$ 15	\$ 2	\$ 20
Texas	42		34	76
South Central	2	3		5
West	2		10	12
Wind			47	47
Other	4			4
Capital expenditures through March 31, 2008	53	18	93	164
Capital expenditures through the remainder of 2008	181	269	512	962
Total estimated capital expenditures for 2008	\$ 234	\$ 287	\$ 605	\$ 1,126
Total estimated repowering equity investments for 2008	N/A	N/A	\$ 87	\$ 87

Repowering capital expenditures and investments *Repowering* NRG project capital expenditures consisted of approximately \$47 million in deposits for wind turbines and construction related costs for the Elbow Creek wind farm project which is currently under construction. In addition, the Company's *Repowering* NRG capital expenditures included \$22 million related to the construction of Cedar Bayou Unit 4 in Texas and \$10 million for a deposit on a turbine for the repowering of the El Segundo generating station in the West region.

The Company's estimated repowering capital expenditures for the remainder of 2008 are expected to consist of \$296 million related to the construction and equipment procurement for the Elbow Creek wind farm project and certain wind farm projects under development. In addition, the Company expects to incur additional 2008 expenditures of approximately \$127 million towards the construction of Cedar Bayou Unit 4 and the development of STP Units 3 and 4, and approximately \$60 million for the repowering El Segundo generating station in California.

As subsequently discussed under *Repowering* NRG Updates, NRG expects to contribute approximately \$87 million in assets to its Sherbino wind farm project and has posted a letter of credit in that amount.

Major maintenance and environmental capital expenditures - The Company's baghouse project at its Huntley and Dunkirk plants increased environmental capital expenditures by approximately \$15 million for the three months ended March 31, 2008. Other capital expenditures included \$15 million for STP fuel and \$27 million in maintenance capital expenditures in Texas primarily related to the W.A. Parish and Limestone plants.

NRG anticipates funding these maintenance capital projects primarily with funds generated from operating activities. The Company is also pursuing funding for certain environmental expenditures in the Northeast through Solid Waste Disposal Bonds utilizing tax exempt financing, and expects to draw upon such funds during 2008 and 2009.

Share Repurchases

In January 2008, the Company repurchased 344,000 shares of NRG common stock for approximately \$15 million under its previously announced 2008 Capital Allocation Program, thus completing \$100 million in repurchases since initiation of the program. In February 2008, the Company's Board of Directors authorized an additional \$200 million in common share repurchases that raised the 2008 Capital Allocation Program to approximately \$300 million. In

March 2008, the Company repurchased an additional 937,600 shares of NRG common stock in the open market for approximately \$40 million.

Debt Service Obligations

Beginning in 2008, NRG must annually offer a portion of its excess cash flow (as defined in the Senior Credit Facility) to its first lien lenders under the Term B loan. The percentage of excess cash flow offered to these lenders is dependent upon the Company's consolidated leverage ratio (as defined in the Senior Credit Facility) at the end of the preceding year. Of the amount offered, the first lien lenders must accept 50% while the remaining 50% may either be accepted or rejected at the lenders' option. The mandatory annual offer required for 2008 was \$446 million, against which the Company made a \$300 million prepayment in December

Table of Contents

2007. Of the remaining \$146 million, the lenders accepted a repayment of \$143 million in March 2008. The amount retained by the Company can be used for investments, capital expenditures and other items as defined by the Senior Credit Facility.

Cash Flow Discussion

The following table reflects the changes in cash flows for the comparative periods; all cash flow categories include the cash flows from both continuing operations and discontinued operations:

(In millions)

Three months ended March 31,	2008	2007
Net cash provided by operating activities	\$ 60	\$ 106
Net cash used by investing activities	(132)	(112)
Net cash used by financing activities	\$ (224)	\$ (136)

Net Cash Provided By Operating Activities

For the three months ended March 31, 2008, net cash provided by operating activities decreased by \$46 million compared to the same period in 2007, of which \$13 million was due to a decrease in net income. The remaining difference was due to:

Collateral deposits NRG's net collateral deposits in support of derivative contracts increased by \$150 million for the three months ended March 31, 2008, compared to an increase of \$120 million during the same period in 2007, a difference of \$30 million due to increases in natural gas and coal prices which impacted the Company's hedges. As of March 31, 2008, NRG had net cash collateral deposit of \$221 million.

Net Cash Used in Investing Activities

For the three months ended March 31, 2008, net cash used in investing activities was approximately \$20 million more than the same period in 2007. This increase in investing activities was due to:

Capital expenditures NRG's capital expenditures increased by \$57 million due to *Repowering* NRG projects, primarily related to \$47 million in deposits for wind turbines related to the Elbow Creek wind farm and approximately \$22 million related to the construction of Cedar Bayou Unit 4. In addition, the Company's is continuing baghouse project at the Huntley and Dunkirk plants increased environmental capital expenditures by approximately \$11 million.

Asset sales Proceeds from asset sales decreased by \$17 million. The Company received \$12 million in 2008, primarily from the sale of rail cars, and received \$29 million in 2007 from the sale of its Red Bluff and Chowchilla II power plants.

Purchases of emission allowances decreased by \$60 million.

Net Cash Used in Financing Activities

For the three months ended March 31, 2008, net cash used by financing activities increased by approximately \$88 million compared to 2007, due to:

Debt Payment The Company paid down \$143 million of its Term B loan in March 2008, as discussed above under *Debt Service Obligations*.

Share Repurchase During the quarter ended March 31, 2008, the Company repurchased approximately \$55 million of shares of NRG common stock, compared to \$103 million for the quarter ended March 31, 2007.

NOL s, Deferred Tax Assets and FIN 48 Implications

As of March 31, 2008, the Company had generated total domestic and foreign pre-tax book income of \$76 million and \$26 million, respectively. In addition, NRG has cumulative foreign NOL carryforwards of \$305 million, of which \$75 million will expire starting in 2011 through 2017 and of which \$230 million do not have an expiration date.

In addition to these amounts, the Company has \$698 million of tax effected unrecognized tax benefits which relate primarily to net operating losses for tax return purposes but have been classified as capital loss carryforwards for financial statements purposes and for which a full valuation allowance has been established. As a result of the Company's tax position, and based on current forecasts,

Table of Contents

future U.S. domestic income tax payments will be minimal through mid-year 2009 as these unrecognized tax benefits will be utilized for tax return purposes.

However, as the position remains uncertain, of the \$698 million of tax effected unrecognized tax benefits, the Company has recorded a non-current tax liability of \$50 million and may accrue the remaining balance as an increase to non-current liabilities until final resolution with the related taxing authority.

The Company has been contacted for examination by the Internal Revenue Service for years 2004 through 2006. The audit is expected to commence in June 2008 and continue for approximately 18 to 24 months.

New and On-going Company Initiatives

FORNRG Update

During 2007, the Company announced the acceleration and planned conclusion of the *FORNRG* 1.0 program by bringing forward the previously announced 2009 target of \$250 million in pre-tax income improvements to 2008. The Company remains on course to achieve the target of \$250 million and to launch the next phase of the program, *FORNRG* 2.0, during 2008.

Nuclear Innovation North America

On March 25, 2008, NRG announced the formation of Nuclear Innovation North America LLC, or NINA, an NRG subsidiary focused on marketing, siting, developing, financing and investing in new advanced design nuclear projects in select markets across North America, including the planned STP units 3 and 4 that NRG is developing on a 50/50 basis with City of San Antonio's agent CPS Energy at the STP nuclear power station site. NRG's rights to develop STP units 3 and 4 have been contributed to special purpose subsidiaries of NINA. NINA will be focused only on developing new projects and will not be involved in the operations of the existing STP units 1 and 2.

On April 21, 2008, NINA entered into a \$20 million revolving loan arrangement, as borrower, to provide working capital to NINA. This facility matures on April 21, 2011, and permits NINA to make cash draws or issue letters of credit. Borrowings accrue interest at either LIBOR or a base rate, plus a spread. As of April 21, 2008, NINA had borrowed \$10 million.

Toshiba Corporation, or Toshiba, will serve as the prime contractor on all of NINA's projects, and has agreed to partner with NRG on the NINA venture. Toshiba is currently prime contractor of the STP units 3 and 4 project and is providing licensing support and leading all engineering and scheduling activities, which ultimately will lead to responsibility for constructing the project. Toshiba will invest \$300 million in NINA in six annual installments of \$50 million, the last three of which are subject to certain conditions, in exchange for a 12% equity ownership in NINA. Half of this investment will be to fund development activities related to STP units 3 and 4. The other half will be targeted towards developing and deploying additional Advanced Boiling Water Reactor, or ABWR, projects in North America with other potential partners. Toshiba is also extending pre-negotiated Engineering, Procurement and Construction, or EPC, terms to NINA for two additional two-unit nuclear projects similar to the terms being offered for the STP unit 3 and 4 development.

NINA intends to use the NRC certified ABWR design, with only a limited number of changes to enhance safety and construction schedules. NINA will file a revision to the COLA by the fourth quarter 2008. Given the expected changes to the application, NRG anticipates STP units 3 and 4 will come online in 2015 and 2016, respectively.

Table of Contents***Repowering NRG Update******Plants under Construction***

The Company has four projects under construction, three of which (Cos Cob, Sherbino I Wind Farm, and Elbow Creek Wind Farm) broke ground during the quarter.

Cos Cob, which will add 40 megawatts of peaking capacity in the NEPOOL market, is scheduled to be completed on June 1, 2008 at a cash cost of \$18 million.

On February 2008, a wholly owned subsidiary of NRG entered into a 50/50 joint venture with a subsidiary of BP Alternative Energy North America Inc., or BP, to build and own the Sherbino I Wind Farm LLC, or Sherbino. This is a 150 MW wind project consisting of 50 Vestas 3 MW wind turbine generators, located approximately 40 miles east of Fort Stockton in Pecos County, Texas. The project is scheduled to reach commercial operations by the end of 2008 with NRG's 50 percent ownership providing a net capacity of 75 MW.

On March 27, 2008, NRG, through its wholly owned subsidiary, Padoma Wind Power LLC., began construction of the Elbow Creek project, a wholly owned 122 MW wind farm in Howard County near Big Spring, Texas. The project is also scheduled to reach commercial operations by the end of 2008.

El Segundo Energy Center LLC

On March 7, 2008, NRG, through its wholly owned subsidiary, El Segundo Energy Center LLC., executed a 10 year tolling agreement with Southern California Edison. Pre-construction activities, including a \$10 million non-refundable deposit to the equipment provider to meet the construction schedule, started shortly thereafter on a 550 MW rapid response combined cycle facility in El Segundo, California. The project is scheduled to reach commercial operations by June 1, 2011.

GenConn Energy LLC

On March 3, 2008, GenConn Energy LLC, or GenConn, a 50/50 joint venture vehicle of NRG and The United Illuminating Company, submitted a binding bid to the Connecticut Department of Public Utility Control, or DPUC, for new peaking generation facilities in Connecticut subject to a regulated long-term contract. In its bid, GenConn proposed 4 different options providing from 196 MW to 490 MW of new generation at as many as 3 different sites owned by NRG. Both the prosecutorial staff of the DPUC, an office within the DPUC that was formed to independently evaluate the proposals, and the Connecticut Office of Consumer Counsel have recommended portfolios of facilities that include from 196 MW to 392 MW of generation from GenConn. The DPUC is expected to select the winning proposal or combination of proposals by July 2008.

econrg Update***Commercial Scale Carbon Capture and Sequestration Demonstration***

In April 2008, NRG signed a development agreement with Powerspan Corp., or Powerspan, to jointly perform engineering work to support the design and construction of a demonstration facility that will be among the largest carbon capture and sequestration projects in the world and may be the first to achieve commercial scale from an existing coal-fueled power plant. The project will be constructed at NRG's W.A. Parish plant near Sugar Land, Texas, and is designed to capture and sequester up to 90% of the carbon dioxide from flue gas equal in quantity to that from a 125 MW unit using Powerspan's proprietary ECQ™ technology, a post-combustion, regenerative process which uses an ammonia-based solution to capture CO₂ from the flue gas and release it in a form that is ready for safe transportation and permanent geological storage. The CO₂ from the process would either be sequestered or sold for use in enhanced oil recovery projects. The project, which is expected to be operational in 2012, will be funded by NRG, potential partners and federal and state grants.

Plasma Gasification Technology

On April 3, 2007, NRG purchased approximately 2.2 million shares at CAD\$2.25 per share for a less than 6% interest in Alter Nrg Corporation, a Canadian company that provides alternative energy solutions using plasma gasification, a process that converts carbon-containing materials into synthetic gas. As part of the transaction NRG has been granted an exclusive license to use Alter Nrg Corp's plasma torch technology to repower unit 6 of the Company's Somerset facility in Somerset, MA. The qualified approval of the project by Massachusetts Department of Environmental Protection received in January 2008 to convert Somerset facility to a coal and biomass gasification power generation facility was challenged and the review of the challenge by the agency is pending.

Table of Contents**Off-Balance Sheet Arrangements*****Obligations Under Certain Guarantee Contracts***

NRG and certain of its subsidiaries enter into guarantee arrangements in the normal course of business to facilitate commercial transactions with third parties. These arrangements include financial and performance guarantees, stand-by letters of credit, debt guarantees, surety bonds and indemnifications.

Retained or Contingent Interests

NRG does not have any material retained or contingent interests in assets transferred to an unconsolidated entity.

Derivative Instrument obligations

On August 11, 2005, NRG issued 3.625% Preferred Stock that included a conversion feature which is considered a derivative per FAS 133, as amended. Although it is considered a derivative, it is exempt from derivative accounting as it is excluded from the scope pursuant to paragraph 11(a) of FAS 133. As of March 31, 2008, based on the Company's stock price, the redemption value of this embedded derivative was approximately \$149 million.

On October 13, 2006, NRG through its unrestricted wholly-owned subsidiaries NRG Common Stock Fund I and NRG Common Stock Fund II, issued notes and preferred interests for the repurchase of NRG's common stock. Included in the agreement is a feature which is considered an embedded derivative per SFAS 133. Although it is considered a derivative, it is exempt from derivative accounting as it is excluded from the scope pursuant to paragraph 11(a) of SFAS 133. As of March 31, 2008, based on the Company's stock price, the redemption value of this embedded derivative was approximately \$62 million.

Obligations Arising Out of a Variable Interest in an Unconsolidated Entity

Variable interest in Equity investments As of March 31, 2008, NRG had not entered into any financing structure that was designed to be off-balance sheet that would create liquidity, financing or incremental market risk or credit risk to the Company. However, NRG has several investments with an ownership interest percentage of 50% or less in energy and energy-related entities, including Sherbino I Wind Farm LLC (hereinafter discussed), that are accounted for under the equity method of accounting. NRG's pro-rata share of non-recourse debt held by unconsolidated affiliates was approximately \$220 million as of March 31, 2008. This indebtedness may restrict the ability of these affiliates to issue dividends or distributions to NRG.

As previously discussed, NRG and BP entered into a 50/50 joint venture in February 2008 to build and own the Sherbino I Wind Farm LLC, or Sherbino. A wholly owned subsidiary of NRG is managing the construction that is being conducted by an independent Engineering, Procurement and Construction contractor, and an affiliate of BP will manage the operations once commercial operations commence. The project will be funded through a combination of equity contributions from the owners and non-recourse project-level debt. NRG expects to contribute \$87 million in equity to the joint venture and has posted a letter of credit in this amount. NRG's maximum exposure to loss is limited to its expected equity investments. Sherbino has also entered into a long-term natural gas swap to mitigate a portion of power price risk for its expected power generation. NRG has determined that Sherbino is a variable interest entity, or VIE, but that the Company is not the primary beneficiary that is required to consolidate Sherbino under FASB Interpretation No. 46(R), *Consolidation of Variable Interest Entities*. Consequently, NRG accounts for its investment in Sherbino under the equity method of accounting.

Synthetic Letter of Credit Facility and Revolver Facility Under NRG's amended Senior Credit Facility which the Company entered into in June 2007, the Company has a \$1.3 billion synthetic Letter of Credit Facility which is secured by a \$1.3 billion cash deposit at Deutsche Bank AG, New York Branch, the Issuing Bank. This deposit was funded using proceeds from the Senior Credit Facility investors who participated in the facility syndication. Under the Synthetic Letter of Credit Facility, NRG is allowed to issue letters of credit for general corporate purposes including posting collateral to support the Company's commercial operations activities. On January 30, 2008, NRG entered into an agreement with Bank of America, whereby Bank of America has also agreed to be an issuing bank under the revolver portion of the Company's Senior Credit Facility. Bank of America has agreed to issue up to \$250 million of letters of credit under the revolver. This increases the amount of unfunded letters of credit the Company can issue under its Revolving Credit Facility to \$900 million for ongoing working capital requirements and for general corporate purposes, including acquisitions that are permitted under the Senior Credit Facility. In addition, NRG is permitted to issue additional letters of credit of up to \$100 million under the Senior Credit facility through other financial

institutions.

Table of Contents

As of March 31, 2008, the Company had issued \$829 million in letters of credit under the Synthetic Letter of Credit Facility. In addition, as of March 31, 2008, the Company had issued \$3 million in letters of credit under the Revolving Credit Facility. A portion of these letters of credit supports non-commercial letter of credit obligations.

Contractual Obligations and Commercial Commitments

NRG has a variety of contractual obligations and other commercial commitments that represent prospective cash requirements in addition to the Company's capital expenditure programs, as disclosed in the Company's Form 10-K. Also see Note 13, *Commitments and Contingencies*, to the condensed consolidated financial statements of this Form 10-Q for a discussion of new commitments and contingencies that also include contractual obligations and commercial commitments that occurred during the first quarter 2008.

Critical Accounting Estimates

NRG's discussion and analysis of the financial condition and results of operations are based upon the consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States of America. The preparation of these financial statements and related disclosures in compliance with generally accepted accounting principles, or GAAP, requires the application of appropriate technical accounting rules and guidance as well as the use of estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses, and related disclosures of contingent assets and liabilities. The application of these policies necessarily involves judgments regarding future events, including the likelihood of success of particular projects, legal and regulatory challenges. These judgments, in and of themselves, could materially affect the financial statements and disclosures based on varying assumptions, which may be appropriate to use. In addition, the financial and operating environment also may have a significant effect, not only on the operation of the business, but on the results reported through the application of accounting measures used in preparing the financial statements and related disclosures, even if the nature of the accounting policies have not changed.

On an ongoing basis, NRG evaluates these estimates, utilizing historic experience, consultation with experts and other methods the Company considers reasonable. In any event, actual results may differ substantially from the Company's estimates. Any effects on the Company's business, financial position or results of operations resulting from revisions to these estimates are recorded in the period in which the facts that give rise to the revision become known.

ITEM 3 QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

NRG is exposed to several market risks in the Company's normal business activities. Market risk is the potential loss that may result from market changes associated with the Company's merchant power generation or with an existing or forecasted financial or commodity transaction. The types of market risks the Company is exposed to are commodity price risk, interest rate risk and currency exchange risk. In order to manage these risks the Company uses various fixed-price forward purchase and sales contracts, futures and option contracts traded on the New York Mercantile Exchange, and swaps and options traded in the over-the-counter financial markets to:

- Manage and hedge fixed-price purchase and sales commitments;
- Manage and hedge exposure to variable rate debt obligations;
- Reduce exposure to the volatility of cash market prices; and
- Hedge fuel requirements for the Company's generating facilities.

Commodity Price Risk

Commodity price risks result from exposures to changes in spot prices, forward prices, volatility in commodities, and correlations between various commodities, such as natural gas, electricity, coal and oil. A number of factors influence the level and volatility of prices for energy commodities and related derivative products. These factors include:

- Seasonal, daily and hourly changes in demand;
- Extreme peak demands due to weather conditions;
- Available supply resources;
- Transportation availability and reliability within and between regions; and
- Changes in the nature and extent of federal and state regulations.

Table of Contents

As part of NRG's overall portfolio, NRG manages the commodity price risk of the Company's merchant generation operations by entering into various derivative or non-derivative instruments to hedge the variability in future cash flows from forecasted sales of electricity and purchases of fuel. These instruments include forward purchase and sale contracts, futures and option contracts traded on the New York Mercantile Exchange, and swaps and options traded in the over-the-counter financial markets. The portion of forecasted transactions hedged may vary based upon management's assessment of market, weather, operation and other factors.

While some of the contracts the Company uses to manage risk represent commodities or instruments for which prices are available from external sources, other commodities and certain contracts are not actively traded and are valued using other pricing sources and modeling techniques to determine expected future market prices, contract quantities, or both. NRG uses the Company's best estimates to determine the fair value of commodity and derivative contracts held and sold. These estimates consider various factors, including closing exchange and over-the-counter price quotations, time value, volatility factors and credit exposure. However, it is likely that future market prices could vary from those used in recording mark-to-market derivative instrument valuation, and such variations could be material.

NRG measures the sensitivity of the Company's portfolio to potential changes in market prices using Value at Risk, or VAR. VAR is a statistical model that attempts to predict risk of loss based on market price and volatility. Currently, the company estimates VAR using a Monte Carlo simulation based methodology. NRG's total portfolio includes mark-to-market and non mark-to-market energy assets and liabilities.

NRG uses a diversified VAR model to calculate an estimate of the potential loss in the fair value of the Company's energy assets and liabilities, which includes generation assets, load obligations, and bilateral physical and financial transactions. The key assumptions for the Company's diversified model include: (1) a lognormal distribution of prices, (2) one-day holding period, (3) a 95% confidence interval, (4) a rolling 36-month forward looking period, and (5) market implied volatilities and historical price correlations.

As of March 31, 2008, the VAR for NRG's commodity portfolio, including generation assets, load obligations and bilateral physical and financial transactions calculated using the diversified VAR model was \$43 million.

The following table summarizes average, maximum and minimum VAR for NRG for the three months ended March 31, 2008 and 2007.

(In millions)

VAR^(a)	2008	2007
As of March 31,	\$ 43	\$ 22
Average	53	26
Maximum	65	34
Minimum	35	22

(a) Prior to December 4, 2007, NRG's VAR measurement was based on a rolling 24-month forward looking period.

Due to the inherent limitations of statistical measures such as VAR, the relative immaturity of the competitive markets for electricity and related derivatives, and the seasonality of changes in market prices, the VAR calculation may not capture the full extent of commodity price exposure. As a result, actual changes in the fair value of

mark-to-market energy assets and liabilities could differ from the calculated VAR, and such changes could have a material impact on the Company's financial results.

In order to provide additional information for comparative purposes to NRG's peers, the Company also uses VAR to estimate the potential loss of derivative financial instruments that are subject to mark-to-market accounting. These derivative instruments include transactions that were entered into for both asset management and trading purposes. The VAR for the derivative financial instruments calculated using the diversified VAR model as of March 31, 2008, for the entire term of these instruments entered into for both asset management and trading was approximately \$21 million.

Table of Contents**Interest Rate Risk**

NRG is exposed to fluctuations in interest rates through the Company's issuance of fixed rate and variable rate debt. Exposures to interest rate fluctuations may be mitigated by entering into derivative instruments known as interest rate swaps, caps, collars and put or call options. These contracts reduce exposure to interest rate volatility and result in primarily fixed rate debt obligations when taking into account the combination of the variable rate debt and the interest rate derivative instrument. NRG's risk management policies allow the Company to reduce interest rate exposure from variable rate debt obligations.

As of March 31, 2008, the Company had various interest rate swap agreements with notional amounts totaling approximately \$2.7 billion. If the swaps had been discontinued on March 31, 2008, the Company would have owed the counterparties approximately \$127 million. Based on the investment grade rating of the counterparties, NRG believes its exposure to credit risk due to nonperformance by counterparties to its hedge contracts to be insignificant.

NRG has both long- and short-term debt instruments that subject the Company to the risk of loss associated with movements in market interest rates. As of March 31, 2008, a 100 basis point change in interest rates would result in a \$12 million change in interest expense on a rolling twelve month basis.

As of March 31, 2008, the Company's long-term debt fair value was \$8.1 billion and the carrying amount was \$8.0 billion. NRG estimates that a 1% decrease in market interest rates would have increased the fair value of the Company's long-term debt by \$477 million.

Liquidity Risk

Liquidity risk arises from the general funding needs of NRG's activities and in the management of the Company's assets and liabilities. NRG's liquidity management framework is intended to maximize liquidity access and minimize funding costs. Through active liquidity management, the Company seeks to preserve stable, reliable and cost-effective sources of funding. This enables the Company to replace maturing obligations when due and fund assets at appropriate maturities and rates. To accomplish this task, management uses a variety of liquidity risk measures that take into consideration market conditions, prevailing interest rates, liquidity needs, and the desired maturity profile of liabilities.

Based on a sensitivity analysis, a \$1 per MWh increase or decrease in electricity prices across the term of the marginable contracts would cause a change in margin collateral outstanding of approximately \$15 million as of March 31, 2008. This analysis uses simplified assumptions and is calculated based on portfolio composition and margin-related contract provisions as of March 31, 2008.

Credit Risk

Credit risk relates to the risk of loss resulting from non-performance or non-payment by counterparties pursuant to the terms of their contractual obligations. The Company monitors and manages the credit risk of NRG and its subsidiaries through credit policies that include (i) an established credit approval process, (ii) a daily monitoring of counterparties credit limits, (iii) the use of credit mitigation measures such as margin, collateral, credit derivatives or prepayment arrangements, (iv) the use of payment netting agreements, and (v) the use of master netting agreements that allow for the netting of positive and negative exposures of various contracts associated with a single counterparty. Risks surrounding counterparty performance and credit could ultimately impact the amount and timing of expected cash flows. The Company has credit protection within various agreements to call on additional collateral support if and when necessary. As of March 31, 2008, NRG held net collateral of approximately \$221 million from counterparties.

A portion of NRG's credit risk is related to transactions that are recorded in the Company's consolidated Balance Sheets. These transactions primarily consist of open positions from the Company's marketing and risk management operation that are accounted for using mark-to-market accounting, as well as amounts owed by counterparties for transactions that settled but have not yet been paid.

Table of Contents

The following table highlights the credit quality and their balance sheet settlement exposures related to these activities as of March 31, 2008:

(In millions, except ratios)	Exposure Before		Net Exposure
	Collateral	Collateral	
Credit Exposure			
Investment grade	\$ 2,966	\$ 556	\$ 2,410
Non-investment grade	145	13	132
Not rated	214	6	208
Total	\$ 3,325	\$ 575	\$ 2,750
Investment grade	89%	97%	88%
Non-investment grade	4%	2%	5%
Not rated	7%	1%	7%

Additionally, the Company has concentrations of suppliers and customers among coal suppliers, electric utilities, energy marketing and trading companies, and regional transmission operators. These concentrations of counterparties may impact NRG's overall exposure to credit risk, either positively or negatively, in that counterparties may be similarly affected by changes in economic, regulatory and other conditions.

As of March 31, 2008, NRG's credit risk to significant counterparties greater than 10% was \$2.1 billion out of the Company's net exposure of \$2.8 billion. NRG does not anticipate any material adverse effect on the Company's financial position or results of operations as a result of nonperformance by any of NRG's counterparties.

Fair Value of Derivative Instruments

NRG may enter into long-term power sales contracts, fuel purchase contracts and other energy-related financial instruments to mitigate variability in earnings due to fluctuations in spot market prices, to hedge fuel requirements at generation facilities and protect fuel inventories. In addition, in order to mitigate interest rate risk associated with the issuance of the Company's variable rate and fixed rate debt, NRG enters into interest rate swap agreements.

NRG's trading activities include contracts entered into to profit from market price changes as opposed to hedging an exposure, and are subject to limits in accordance with the Company's risk management policy. These contracts are recognized on the balance sheet at fair value and changes in the fair value of these derivative financial instruments are recognized in earnings. These trading activities are a complement to NRG's energy marketing portfolio.

The tables below disclose the activities that include non-exchange traded contracts accounted for at fair value. Specifically, these tables disaggregate realized and unrealized changes in fair value; identify changes in fair value attributable to changes in valuation techniques; disaggregate estimated fair values as of March 31, 2008, based on whether fair values are determined by quoted market prices or more subjective means; and indicate the maturities of contracts as of March 31, 2008:

Derivative Activity Losses	(In millions)
Fair value of contracts as of December 31, 2007	\$ (492)
Contracts realized or otherwise settled during the period	(35)
Changes in fair value	(580)
Fair value of contracts as of March 31, 2008	\$ (1,107)

Fair Value of Contracts as of March 31 2008

(In millions)	Maturity		Maturity		Total Fair Value
	Less than 1 Year	1-3 Years	4-5 Years	excess in 4-5 Years	
Prices actively quoted	\$ (53)	\$ (3)	\$	\$	\$ (56)
Prices provided by other external sources	(205)	(551)	(290)	(14)	(1,060)
Prices provided by models and other valuation methods	3	6			9
Total	\$ (255)	\$ (548)	\$ (290)	\$ (14)	\$ (1,107)

The majority of NRG's contracts are non-exchange-traded contracts valued using prices provided by external sources, primarily price quotations available through brokers or over-the-counter, on-line exchanges. Prices reflect the average of the bid-ask mid-point prices obtained from all sources that NRG believes provide the most liquid market for the commodity. The terms for which such price

Table of Contents

information is available vary by commodity, region and product. The remainder of the assets represents contracts for which external valuations are not available, primarily option contracts. These contracts are valued using the Black Scholes model, an industry standard option valuation model. The fair values in each category reflect the level of forward prices and volatility factors as of March 31, 2008 and may change as a result of changes in these factors. Management uses its best estimates to determine the fair value of commodity and derivative contracts NRG holds and sells. These estimates consider various factors including closing exchange and over-the-counter price quotations, time value, volatility factors and credit exposure. It is possible, however, that future market prices could vary from those used in recording assets and liabilities from energy marketing and trading activities and such variations could be material.

The Company has elected to disclose derivative activity on a trade-by-trade basis and does not offset amounts at the counterparty master agreement level. Consequently, the magnitude of the changes in individual current and non-current derivative assets or liabilities is higher than the underlying credit and market risk of our portfolio. As discussed in Commodity Price Risk section above, NRG measures the sensitivity of the Company's portfolio to potential changes in market prices using VAR, a statistical model which attempts to predict risk of loss based on market price and volatility. NRG's Risk Management Policy places a limit on one-day holding period VAR, which limits our net open position. However our trade by trade derivative accounting results in a gross-up of our derivative assets and liabilities. Thus, the net derivative assets and liability position is a better indicator of our hedging activity. As of March 31, 2008, NRG's net derivative liability was \$1,107 million, an increase of \$615 million as compared to December 31, 2007. This increase was primarily driven by movements in coal, gas and power prices.

Currency Exchange Risk

NRG may be subject to foreign currency risk as a result of the Company entering into purchase commitments with foreign vendors for the purchase of major equipment associated with *Repowering* NRG initiatives. To reduce the risks to such foreign currency exposure, the Company may enter into transactions to hedge its foreign currency exposure using currency options and forward contracts. At March 31, 2008, no foreign currency options or forward contracts were outstanding. Due to the Company's limited foreign currency exposure to date, the effect of foreign currency fluctuations has not been material to the Company's results of operations, financial position and cash flows as of March 31, 2008.

ITEM 4 CONTROLS AND PROCEDURES*Evaluation of Disclosure Controls and Procedures*

Under the supervision and with the participation of the Company's management, including its principal executive officer, principal financial officer and principal accounting officer, the Company conducted an evaluation of its disclosure controls and procedures, as such term is defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended, or the Exchange Act. Based on this evaluation, the Company's principal executive officer, principal financial officer and principal accounting officer concluded that the disclosure controls and procedures were effective as of the end of the period covered by this report on Form 10-Q.

Changes in Internal Control over Financial Reporting

There have been no changes in the Company's internal control over financial reporting (as such term is defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act) during the current period covered by this report on Form 10-Q that have materially affected, or are reasonably likely to materially affect the Company's internal control over financial reporting.

Inherent Limitations over Internal Controls

NRG's internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of consolidated financial statements for external purposes in accordance with generally accepted accounting principles.

Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations, including the possibility of human error and circumvention by collusion or overriding of controls. Accordingly, even an effective internal control system may not prevent or detect material misstatements on a timely basis. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with

the policies or procedures may deteriorate.

Table of Contents**PART II OTHER INFORMATION****ITEM 1 LEGAL PROCEEDINGS**

For a discussion of material legal proceedings in which NRG was involved through March 31, 2008, see Note 13 to the condensed consolidated financial statements of this Form 10-Q.

ITEM 1A RISK FACTORS

Information regarding risk factors appears in Part I, Item 1A, Risk Factors in NRG Energy, Inc.'s 2007 Annual Report on Form 10-K for the fiscal year ended December 31, 2007.

ITEM 2 UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

Item 2(c) Purchase of Equity securities by NRG

	Total number of shares purchased	Average price paid per share	Total number of shares purchased as part of publicly announced plans or programs	Dollar value of shares that may be purchased under the plans or programs
For the period ended April 25, 2008				
January 1 - January 31	344,000	\$ 42.94	344,000	\$
February 1 - February 28				200,000,000
March 1 - March 31	937,600	42.65	937,600	160,008,401
First Quarter Total	1,281,600	42.73	1,281,600	160,008,401
April 1 - April 25, 2008				
Year-to-date	1,281,600	\$ 42.73	1,281,600	\$ 160,008,401

On February 28, 2008, NRG announced a \$300 million stock buyback as part of the Company's 2008 Capital Allocation Program. As discussed in Note 7, *Changes in Capital Structure*, the Company initiated its 2008 program in December 2007. From December 2007 through January 2008, the Company repurchased 2,381,700 shares of NRG common stock in the open market for approximately \$100 million. In February 2008, the Company's Board increased its share repurchase program by an additional \$200 million stock buyback.
