EMC s Celerra dedupe calculator doesn t add up

I ran across this <u>EMC dedupe calculator</u> today. Interested in the space savings EMC was advertising for primary storage with dedupe, thought I d take a closer look. I was surprised by the results. The calculator asks you to input the Size of Current Data for seven different application categories. So I ran the calculator 7 times, each time entering 10TB into the 7 categories, one at a time. Here are the results I got:

EMC Celerra Data Duplication Calculator

(Data Duplication? I sure hope that s a typo)

Potential Savings:

Active virtual machine files 0TB (0%) saved
Active databases and messaging files 0TB (0%) saved
Compressed files .2TB (2%) saved
Media files .4TB (4%) saved
Binaries 1.7TB (17%) saved
Office documents 3.3TB (33%) saved
Text files 5.3TB (53%) saved

Wait a minute, this can t be right. 4 of the 7 categories offer between 0% and 4% savings. Doesn t seem like its worth the effort. Well how about Binaries at 17% savings? But EMC only dedupes inactive files which of my binaries are inactive? Not sure, so I think I ll skip that one. Office documents bingo 33% saved but again this only applies to inactive docs, so I guess my savings will be a little less. Finally, there are text files with a whopping 53% savings but I

probably don t have 10TB in inactive .txt files though. At this point, I am a little disappointed in EMC.

The way I see it, using Celerra dedupe in a real world scenario would produce maybe 5% overall savings on a good day. The problem you see is that the majority of user data is tied up in those darned applications that Celerra dedupe can t touch. The puzzling part is why EMC would include applications with zero percent savings in their calculator. Trying to deceive users? Nah there must be some other explanation. Guess I ll leave that one up to them to answer. Your voice in the search for dedupe honesty-

Additional Information and Where to Find It

In connection with the proposed acquisition of Data Domain, on June 4, 2009, NetApp filed with the SEC a Registration Statement on

Form S-4 containing a Proxy Statement/Prospectus for Data Domain s stockholders. **Before making any investment** or voting decision, investors are urged to read the documents filed with the SEC carefully in their entirety because such

documents contain important information about the proposed transaction. You may obtain free copies of the Form S-4 and other documents filed with the SEC by NetApp and Data Domain through the web site maintained by the SEC at www.sec.gov, on NetApp s website at www.netapp.com and on Data Domain s website at www.datadomain.com.

Freudian Typo

Given everything that s going on between us and EMC lately, this has to be the most unfortunately timed corporate typo in quite a while. OTOH if you take EMC claims at face value, then this kinda proves the point that our FAS & V-Series primary dedupe is <u>superior</u>.

Kudos to the good doctor for catching this!
